3.11.3.1 If possible, maintain the assigned flight level until established on the 9.3 KM (5.0 NM) parallel, same direction track or route offset. If unable, initially minimize the rate of descent to the extent that is operationally feasible.

3.11.3.2 Once established on a parallel, same direction track or route offset by 9.3 KM (5.0 NM), either:

a) descend below FL 290, and establish a 150 M (500 FT) vertical offset from those flight levels normally used, and proceed as required by the operational situation or if an ATC clearance has been obtained, proceed in accordance with the clearance; or

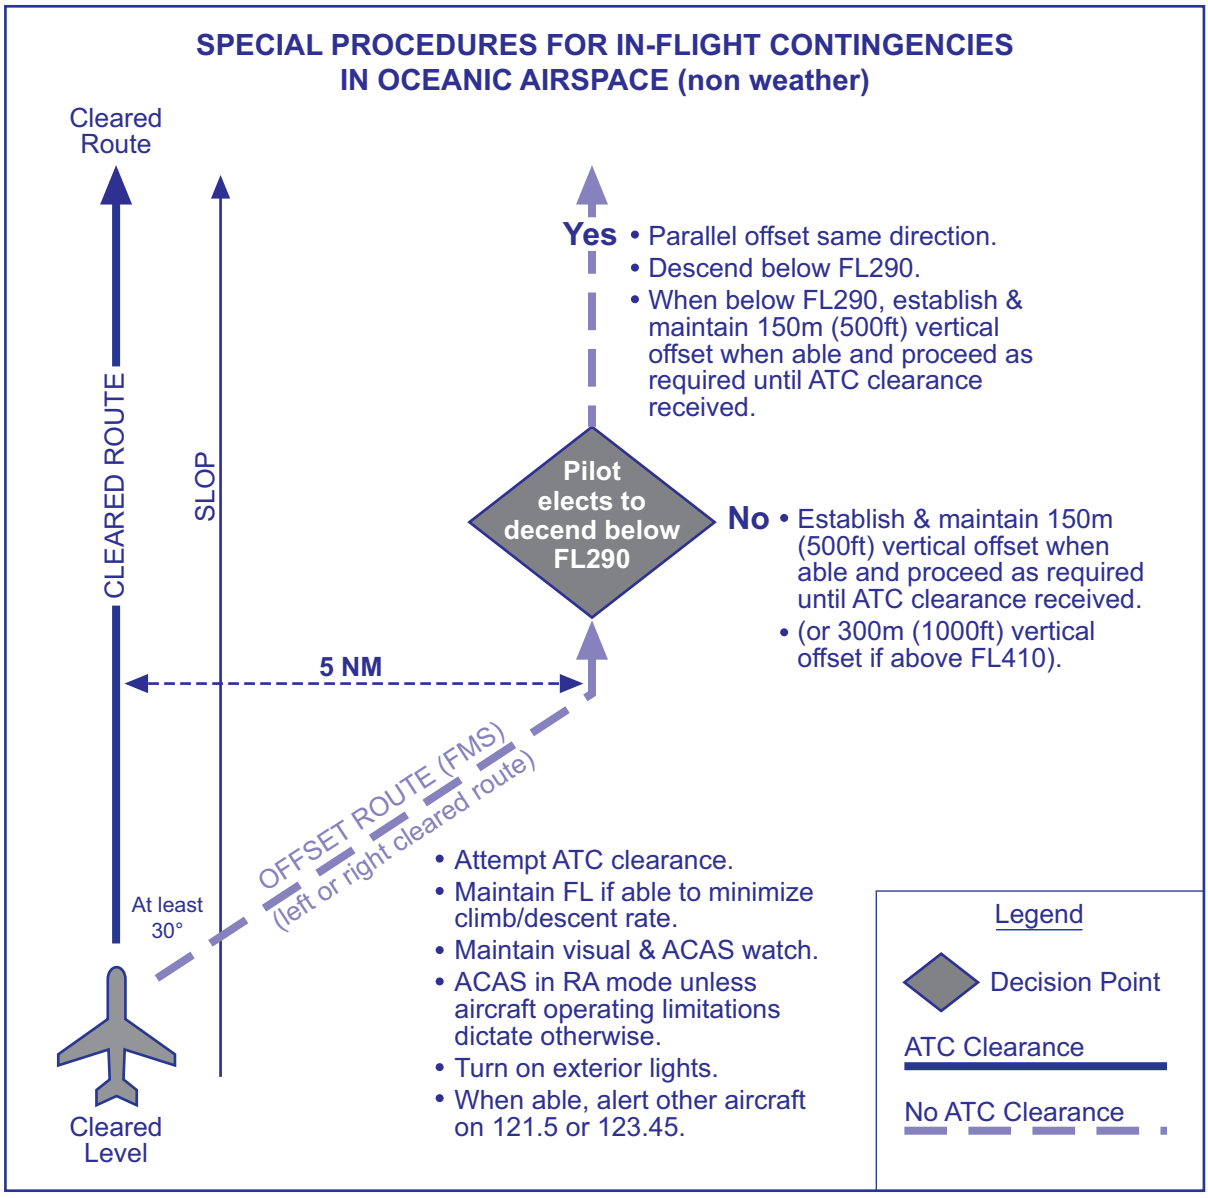
***Note:*** *Descent below FL 290 is considered particularly applicable to operations where there is a predominant traffic flow (e.g. east-west) or parallel track system where the aircraft's diversion path will likely cross adjacent tracks or routes. A descent below FL 290 can decrease the likelihood of conflict with other aircraft, ACAS RA events and delays in obtaining a revised ATC clearance.*

b) establish a 150 M (500 FT) vertical offset (or 300 M (1000 FT) vertical offset if above FL 410) from those flight levels normally used, and proceed as required by the operational situation, or if an ATC clearance has been obtained, proceed in accordance with the clearance.

***Note:*** *Altimetry System Error may lead to less than actual 500 FT vertical separation when the above procedure is applied. In addition, with the 500 FT vertical offset applied, ACAS RAs may occur.*

## ENR 2.2 OTHER REGULATED AIRSPACE (continued)

**Figure 3-1. Visual aid for understanding and applying the contingency procedures guidance**



3.11.4 **Weather Deviation Procedures**

3.11.4.1 **General**

***Note:*** *The following procedures are intended for deviation around adverse meteorological conditions.*

3.11.4.1.1 When weather deviation is required, the pilot should initiate communications with ATC via voice or CPDLC. A rapid response may be obtained by either:

a) stating “WEATHER DEVIATION REQUIRED” to indicate that priority is desired on the frequency and for ATC response; or
b) requesting a weather deviation using a CPDLC lateral downlink message.

3.11.4.1.2 When necessary, the pilot should initiate the communications using the urgency call “PAN PAN” (preferably spoken three times) or by using a CPDLC urgency downlink message.

3.11.4.1.3 The pilot shall inform ATC when weather deviation is no longer required, or when a weather deviation has been completed and the aircraft has returned to its cleared route.

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

3.11.4.2 **ACTIONS TO BE TAKEN WHEN CONTROLLER-PILOT COMMUNICATIONS ARE ESTABLISHED**

3.11.4.2.1 The pilot should notify ATC and request clearance to deviate from track or route, advising, when possible, the extent of the deviation requested. The flight crew will use whatever means is appropriate (i.e. voice and/or CPDLC) to communicate during a weather deviation.

***Note:*** *Pilots are advised to contact ATC as soon as possible with requests for clearance in order to provide time for the request to be assessed and acted upon.*

3.11.4.2.2 ATC should take one of the following actions:

a) When appropriate separation can be applied, issue clearance to deviate from track; or
b) If there is conflicting traffic and ATC is unable to establish appropriate separation. ATC shall;

i. Advise the pilot of inability to issue clearance for the requested deviation;
ii. Advise the pilot of conflicting traffic; and
iii. Request the pilot's intentions.

3.11.4.2.3 The pilot should take the following actions:

a) comply with the ATC clearance issue; or
b) advise ATC of intentions and execute the procedures detailed in 3.11.4.3.

3.11.4.3 **ACTIONS TO BE TAKEN IF A REVISED ATC CLEARANCE CANNOT BE OBTAINED**

***Note:*** *The provisions of this section apply to situations where a pilot needs to exercise the authority of a pilot-in-command under the provisions of Annex 2, 2.3.1.*

3.11.4.3.1 If the aircraft is required to deviate from track or route to avoid adverse meteorological conditions and prior clearance cannot be obtained, an ATC clearance shall be obtained at the earliest possible time. Until an ATC clearance is received, the pilot shall take the following actions:

a) if possible, deviate away from an organized track or route system;
b) establish communications with and alert nearby aircraft by broadcasting, at suitable intervals: aircraft identification, flight level, position (including ATS route designator or the track code) and intentions, on the frequency in use and on 121.500 MHz (or, as a backup, on the inter-pilot air-to-air frequency 123.450 MHz);
c) watch for conflicting traffic both visually and by reference to ACAS (if equipped);
d) turn on all aircraft exterior lights (commensurate with appropriate operating limitations);
e) for deviations of less than 9.3 KM (5.0 NM) from the originally cleared track or route remain at a level assigned by ATC;
f) for deviations greater than or equal to 9.3 KM (5.0 NM) from the originally cleared track or route, when the aircraft is approximately 9.3 KM (5.0 NM) from track, initiate a level change in accordance with Table 3-1;
g) if the pilot receives clearance to deviate from cleared track or route for a specified distance and, subsequently, requests, but cannot obtain a clearance to deviate beyond that distance, the pilot should apply an altitude offset in accordance with Table 3-1 before deviating beyond the cleared distance.
h) when returning to track or route, be at its assigned flight level when the aircraft is within approximately 9.3 KM (5.0 NM) of the centre line; and
i) if contact was not established prior to deviating, continue to attempt to contact ATC to obtain a clearance. If contact was established, continue to keep ATC advised of intentions and obtain essential traffic information.

***Note:*** *If, as a result of actions taken under the provisions of 3.11.4.3.1, the pilot determines that there is another aircraft at or near the same flight level with which a conflict may occur, then the pilot is expected to adjust the path of the aircraft, as necessary, to avoid conflict.*

**Table 3-1**

| Originally cleared track or route centre-line | Deviations > 9.3 KM (5.0 NM) | Level Changed |
|---|---|---|
| EAST (000° - 179° magnetic) | LEFT | DESCEND 90 M (300 FT) |
| | RIGHT | CLIMB 90 M (300 FT) |
| WEST (180° - 359° magnetic) | LEFT | CLIMB 90 M (300 FT) |
| | RIGHT | DESCEND 90 M (300 FT) |

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

3.11.5 **Extended Range Operations by Aeroplanes with Two Turbine Power Units (ETOPS)**

3.11.5.1 If the contingency procedures are employed by a twin-engine aircraft as a result of an engine shutdown or failure of an ETOPS critical system, the pilot should advise ATC as soon as practicable of the situation, reminding ATC of the type of aircraft involved, and request expeditious handling.

## 3.12 Procedure for Strategic Lateral Offsets in NAT Airspace

***Note 1:*** *The following incorporates lateral offset procedures for both the mitigation of the increasing lateral overlap probability due to increased navigation accuracy and wake turbulence encounters.*

***Note 2:*** *The use of highly accurate navigation systems (such as the global navigation satellite system (GNSS)) by an increasing proportion of the aircraft population has had the effect of reducing the magnitude of lateral deviations from the route centre-line and, consequently, increasing the probability of a collision should a loss of vertical separation between aircraft on the same route occur.*

3.12.1 It has been determined that allowing aircraft conducting oceanic flight to fly lateral offsets, not to exceed 3.7 KM **(2 NM) right of centre-line** relative to the direction of flight in tenths of a nautical mile, will provide an additional safety margin and mitigate the risk of conflict when non-normal events such as aircraft navigation errors, altitude deviation errors and turbulence-induced altitude-keeping errors occur. Distributing aircraft laterally across the available positions adds an additional safety margin and reduces collision risk. PANS-ATM, Doc 4444 SLOP is now a standard operating procedure for the entire NAT Region and pilots are encouraged to adopt this procedure as appropriate. These procedures are known as “Strategic Lateral Offset Procedures (SLOP).”

3.12.2 This procedure provides for offsets within the following guidelines. The following provisions apply:

a) Aircraft without automatic offset programming capability must fly the centre-line;
b) Though the majority of flights are able to perform offsets either 1 or 2 NM (whole nautical miles), flights able to perform SLOP procedure in tenths of a nautical mile should use that capability as it contributes to risk reductions;
c) It is recommended that pilots of aircraft capable of programming automatic offsets should randomly select flying centre-line or an offset. In order to obtain lateral spacing from nearby aircraft (i.e. those immediately above and/or below), pilots should use whatever means available (e.g. ACAS/TCAS, communications, visual acquisition, GPWS) to determine the best flight path to fly;
d) An aircraft overtaking another aircraft should offset within the confines of this procedure, if capable, so as to create the least amount of wake turbulence for the aircraft being overtaken;
e) The avoidance of wake turbulence (even in the OTS) can be accomplished effectively within the confines of the SLOP procedure, as specified above. Pilots may contact other aircraft on frequency 123.450 MHz, as necessary, to co-ordinate the best wake turbulence offset option;

   ***Note:*** *It is recognised that pilots will use their judgement to determine the action most appropriate to any given situation and have the final authority and responsibility for the safe operations of the aircraft.*

f) Pilots may apply an offset outbound at the oceanic entry point and must return to centre-line at the oceanic exit point;
g) There is no ATC clearance required for this procedure and it is not necessary that ATC be advised;
h) Voice Position Reports should be based on the waypoints of the current ATC clearance and **not** on the offset positions;
i) **Pilots should not offset to the left of centre-line nor offset more than 2 NM right of centre-line.**

## 3.13 Adherence to ATC Approved Routes

Annex 2.

3.13.1 If an aircraft has inadvertently deviated from the route specified in the ATC clearance, it shall forthwith take action to regain such route within 100 NM from the position at which the deviation was observed.

## 3.14 Flight Information Service

PANS Doc 4444 ATM/501.

3.14.1 SIGMET Information

3.14.1.1 SIGMET information shall be transmitted to aircraft by VOLMET broadcast, by a general call to a group of aircraft, or by directed transmissions to individual aircraft, as determined by the appropriate area control centre according to circumstances, bearing in mind the need to ensure timely receipt of the information by the aircraft and to keep the load of the HF en-route communication channels to a minimum.

3.14.1.2 SIGMET information passed to aircraft shall cover a portion of the route up to two hours flying time ahead of the aircraft.

## 3.15 Air Traffic Services Messages

Regional Supplementary Procedures DOC 7030. PANS Doc 4444 ATM/501.

3.15.1 Filed flight plan messages for flights intending to operate within the Shanwick OCA, at a distance of 60 NM or less from the northern

or southern boundaries of the Shanwick OCA, shall also be addressed to the controlling authority for the adjacent OCA.

### 3.16 Secondary Surveillance Radar (SSR)

Regional Supplementary Procedures DOC 7030.

3.16.1 Operation of transponders

3.16.1.1 Unless otherwise directed by ATC, aircraft equipped with SSR transponders in the NAT region shall operate transponders continuously on Mode A Code 2000 regardless of the direction of flight, except that the last assigned code shall normally be retained for a maximum period of 10 minutes after entry into NAT airspace.

3.16.1.2 For all SSR equipped aircraft with a routeing sequence Reykjavik-Shanwick- Scottish (BIRD-EGGX-EGPX) the last assigned code shall be changed to Mode A 2000 on transfer from Reykjavik and no later than ten minutes after entering Shanwick airspace.

***Note:*** *This procedure does not affect the use of Special Purpose Codes 7500, 7600 and 7700 in cases of unlawful interference, radio failure or emergency.*

3.16.2 Aircraft intending to fly in the SOTA are expected to be equipped with an SSR transponder capable of responding to Mode A interrogations with 4096 codes and Mode C interrogations with Automatic Pressure Altitude Reporting. Aircraft SSR codes will be allocated by Shannon ACC.

3.16.2.1 Exemptions from the SOTA SSR requirements for specific flights may be obtained from the Shannon ACC Supervisor before departure.

### 3.17 Action in the event of Air-Ground Communication Failure

3.17.1 The following procedures are intended to provide general guidance for North Atlantic (NAT) aircraft experiencing a communications failure. These procedures are intended to complement and not supersede State procedures/regulations. It is not possible to provide guidance for all situations associated with a communications failure.

3.17.2 General

3.17.2.1 If so equipped, the pilot of an aircraft experiencing a two way communications failure shall operate the secondary radar transponder on identity Mode A Code 7600 and Mode C.

3.17.2.2 The pilot shall also attempt to contact any ATC facility or another aircraft and inform them of the difficulty and request they relay information to the ATC facility with whom communications are intended.

3.17.3 Communications failure prior to entering NAT oceanic airspace.

3.17.3.1 Due to the potential length of time in oceanic airspace, it is strongly recommended that a pilot experiencing communications failure whilst still in European domestic airspace does not enter the Shanwick Oceanic Control Area but adopts the procedure as specified at ENR 1.1 sub-section 3. However, if the pilot elects to continue, then to allow the ATC organisation to provide adequate separation, adopt either the procedure at paragraphs 3.17.3.2 or 3.17.3.4.

3.17.3.2 If loss of communications is encountered before entering the NAT the pilot should:

- follow the radio communication procedures of the airspace in which the aircraft is operating;
- if the pilot elects to continue the flight, then enter oceanic airspace at the oceanic entry point at the level and speed resulting from the execution of the adjacent airspace radio communications failure (RCF) procedures then;
- follow the procedures in 3.17.4.1 below.

3.17.3.3 If the pilot elects to operate **without** a received and acknowledged oceanic clearance, the pilot shall enter oceanic airspace at the first oceanic entry point level and speed as contained in the filed flight plan and proceed via the filed flight plan route to landfall. That first oceanic level and speed shall be maintained to landfall.

3.17.4 Communications failure after entry to NAT oceanic airspace.

3.17.4.1 If loss of communications is encountered after entering the NAT then:

- The pilot shall maintain the currently cleared route, flight level and speed until reaching the Oceanic Exit Point.
- No route, flight level or speed change shall be made before the Oceanic Exit Point unless a change is deemed necessary by the pilot in command to ensure the safety of the aircraft.
- When being vectored or having been directed by ATC to proceed offset using RNAV without a specified limit, proceed in the most direct manner possible to re-join the current flight plan route no later than the next significant point, taking into consideration the applicable minimum flight altitude.

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

3.17.5 **Emergency Satellite Voice Calls from Aircraft** (See GEN 3.6, paragraph 6.4).

## 3.18 Minimum Aircraft System Performance Specification (MASPS)

3.18.1 **Application of Minimum Navigation Performance Specification (MNPS) in Shanwick OCA**

3.18.1.1 MNPS applies in that part of the Shanwick Oceanic Control Area from FL 285 to FL 420 inclusive. Aircraft using the NAT High Level Airspace (NAT HLA) shown at ENR 6-62 are required to have a navigation performance capability such that:

a) Pre-PBN navigation:

- The standard deviation of lateral track errors shall be less than 6.3 NM;
- the proportion of total flight time spent by aircraft 30 NM or more off the cleared track shall be less than $5.3 \times 10^{-4}$;
- the proportion of the total flight time spent by aircraft between 50 and 70 NM off the cleared track shall be less than $13 \times 10^{-5}$.

These mathematical standards can be approximated operationally as follows:

- Aircraft must be operated so that lateral deviations from track remain less than 12.6 NM for at least 95 per cent of the time the system is required for navigation;
- the navigation system must demonstrate a continuing capability to keep lateral deviations from cleared track in excess of 30 NM to less than 53 per 100 000 flight hours in the system; and
- keep lateral deviations between 50 and 70 NM from cleared track to less than 13 per 100 000 flight hours in the system.

b) Area Navigation (RNAV) Specifications:

- RNAV 10 (RNP 10) specification shall be applicable to navigation systems used to support a minimum lateral separation of 60 NM between aircraft that the requirements to operate in the NAT HLA provided that a portion of the route of the aircraft is within, above or below NAT HLA. In addition RNAV 10 can support a minimum lateral separation of 50 NM between aircraft operating in the New York Oceanic East FIR.

c) Required Navigation Performance (RNP) Specifications:

- RNP 4 specification shall be applicable to navigation systems used to support minimum lateral separations as in (b) above and is required to support minimum lateral separations of 30 NM between aircraft operating within the control area of the New York Oceanic East FIR.

***Note 1:*** *Aircraft that have been NAT MNPS approved by the State of Registry or the State of the Operator prior to 1 January 2015 shall be permitted to operate in NAT HLA until 30 January 2020. As of 1 January 2015 new NAT MNPS approvals shall not be granted.*

***Note 2:*** *RNAV 10 (RNP 10) and RNP 4 approved aircraft require a NAT HLA MNPS approval to demonstrate compliance with the MNPS established for the NAT HLA.*

***Note 3:*** *Except for the navigational portion the requirements for a NAT HLA MNPS approval are equivalent to the 3 requirements that were associated with granting NAT MNPS approvals.*

3.18.1.2 These mathematical standards can be approximated operationally as follows:

a) Aircraft must be operated so that lateral deviations from track remain less than 12.6 NM for at least 95 per cent of the time the system is required for navigation;
b) the navigation system must demonstrate a continuing capability to keep lateral deviations from cleared track in excess of 30 NM to less than 53 per 100 000 flight hours in the system; and
c) keep lateral deviations between 50 and 70 NM from cleared track, to less than 13 per 100 000 flight hours in the system.

3.18.1.3 In order to ensure that the required navigation standards are being observed within the NAT HLA, a continuous monitoring of the navigation accuracy of aircraft in this airspace takes place using land based radars in Canada, Ireland, France, Iceland and the UK. Where large navigation errors are observed the pilot of the aircraft concerned will be notified by the ATC Unit observing the error. The subsequent investigation to determine the cause of the error will involve the ATC Unit, the operator, and the State of Registry.

3.18.1.4 Lateral separation minima for aircraft operating in the NAT HLA are set out in the Regional Supplementary Procedures, NAT Region (ICAO Doc 7030/5). It is implicit in the concept of MNPS and essential to the application of these quoted separation minima, that all operations in the NAT HLA – be they Public Transport or General Aviation – achieve the highest standards of navigation performance accuracy. Thus all flights within the NAT HLA must have the specific approval of either the State of Registry of the aircraft or the State of Registry of the operator for such operations. UK registered aircraft are approved by the UK CAA in accordance with the Air Navigation Order. Such approvals will encompass all aspects of the expected navigation performance accuracy of the aircraft, navigation equipment carried, installation and maintenance procedures and crew navigation procedures and training.

3.18.1.5 The inherent obligations placed upon crews and operators of UK registered aircraft by the NAT HLA requirements can be summarized as follows:

a) The flight MUST have prior approval for operations in NAT HLA;

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

b) the approved aircraft minimum navigation installation MUST be serviceable and MUST have been checked for accuracy prior to entry into NAT HLA;
c) whilst in NAT HLA the approved operating procedures MUST be adhered to. Except in emergency, diversions from the ATC cleared track MUST NOT be made without prior approval of the controlling ATC Unit;
d) if subsequent unserviceability reduces the navigational capability below the required minimum for MNPS operations after entry into NAT HLA then the controlling ATC Unit MUST be advised so as to allow for any adjustments of separation from adjacent aircraft;
e) there MUST be a high standard of supervision, monitoring and cross checking of data inserted into automatic navigation system to prevent large errors arising from erroneous waypoint entries;
f) there MUST be a high standard of co-ordination with ATC Units to ensure that misunderstandings over the route to be flown do not occur.

3.18.1.5.1 Westbound flights submitting an 'RCL' to Shanwick to enter North Atlantic High Level Airspace (NAT HLA) may be invited to confirm that they have been approved for operating within NAT HLA by their State of Registry or their State of Operator.

3.18.1.5.2 The submission of a Flight Plan alone does **NOT** constitute NAT HLA operating approval. Pilots/operators unable to provide such confirmation will not be permitted to fly in NAT HLA airspace but will be required to operate outside HLA (below FL 285 or above FL 420). Details of the flight will be passed to the NAT Central Monitoring Agency (CMA) for follow-up action by the relevant State Aviation Authority.

3.18.1.6 **Navigation Equipment for Unrestricted NAT HLA Operations**.

3.18.1.6.1 In order to justify consideration for State approval for future unrestricted operation in the NAT HLA an aircraft will be required to be equipped as follows:

a) **Two** fully serviceable Long Range Navigation Systems (LRNS).
A LRNS may be one of the following:

i. One Inertial Navigation System (INS);
ii. one Global Navigation Satellite System (GNSS); or
iii. one navigation system using the inputs from one or more Inertial Reference System (IRS) or any other sensor system complying with the NAT HLA requirement.

b) each LRNS must be capable of providing to the flight crew with a continuous indication of the aircraft position relative to desired track.
c) it is highly desirable that the navigation system employed for the provision of steering guidance is capable of being coupled to the auto-pilot.

***Note 1:*** *currently the only GPS system fully operational and for which approval material is available is GPS.*

***Note 2:*** *A GPS installation must be approved as follows:*
*If the two required LRNSs are both GPS they must be approved in accordance with the current version of FAA Advisory Circular AC-20—138D Appendix 1. AC-20-138 requires that GPS systems used in Oceanic airspace must have a FDE function. States other than the USA may set their own standards for operational approval of GPS to provide Primary Means of Navigation in Oceanic and remote areas but in all cases these approvals will include the requirement to carry out Pre-Departure Satellite Navigation Prediction Programmes. If, however, GPS serves as only one of the two required LRNSs then it must be approved in accordance with FAA TSO-C129 or later standard as Class A1, A2, B1, B2, C1 or C2 or with equivalent European Aviation Safety Agency (EASA) documentation ETSO-C129a. In this instance individual States vary in their insistence upon the need for the conduct of pre-departure satellite navigation prediction programmes (viz. FDE/RAIM).*

***Note 3:*** *Currently equivalent approval material for GLONASS is not under development but it will need to be available prior to approval of any GLONASS equipped aircraft for NAT HLA operations.*

3.18.1.7 **Provisions for Partial Loss of the full MNPS Navigational Capability**

3.18.1.7.1 In the event of an aircraft **having State approval for un-restricted operation in NAT HLA** suffering partial loss of navigation capability (only one long range navigation system serviceable) prior to entry into Oceanic Airspace, the pilot should either avoid NAT HLA or consider a re-route via Reykjavik OCA.

3.18.1.8 **Special Routes for Aircraft fitted with a Single LRNS**

3.18.1.8.1 Aircraft, **having State approval for operating in NAT HLA,** which are equipped with normal short-range navigation equipment (VOR/DME, ADF) and at least one fully operational Long Range Navigation System (see paragraph 3.18.1.6.1) are considered capable of meeting the MNPS while operating along the following routes:

***Note:*** *T9 and T290 have continuous VHF coverage at FL 300 and above.*

| Via | Route Options |
|---|---|
| T9 | LASNO - BEGAS (VHF, HF and ADS-B required) |
| T290 | ADVAT - GELPO (VHF, HF and ADS-B required) |

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

3.18.2 **Application of Reduced Vertical Separation Minima (RVSM) in Shanwick OCA**

3.18.2.1 RVSM applies in the MNPS Area of the Shanwick Oceanic Control Area from FL 290 to FL 410 inclusive. Aircraft using this area are required to have a height keeping performance capability as defined in the appropriate ICAO Documents/JAA Temporary Guidance Leaflet.

3.18.2.2 In order to ensure that the overall standard of required height keeping is being achieved within RVSM airspace a technical height keeping monitoring program has been established in accordance with ICAO guidance.

3.18.2.3 In order to ensure that the required altimetry standards are being observed within RVSM airspace, a technical height keeping monitoring programme has been initiated.

3.18.2.3.1 For the task of monitoring technical height keeping accuracy, a hybrid system comprising of a Height Monitoring Unit (HMU) and GPS Monitoring Systems (GMS) is employed. The HMU element consists of an unmanned ground-based HMU near Strumble (United Kingdom).

3.18.2.3.2 The GMS consists of air portable Global Positioning System Monitoring Units (GMUs), GPS reference stations, access to Mode C and MET information, post-flight processing facilities and logistic support.

3.18.2.4 It is implicit in the concept of RVSM airspace and essential to the application of this quoted vertical separation minimum, that all operations in the NAT High Level Airspace/RVSM airspace - be they Public Transport or General Aviation - achieve the highest standards of navigation performance accuracy. Thus all flights within the NAT High Level Airspace must have the specific approval of either the State of Registry of the aircraft, or the State of Registry of the Operator, for such operations. UK Registered aircraft are approved by the UK CAA in accordance with the Air Navigation Order. Such approvals will encompass all aspects of the expected height keeping performance accuracy of the aircraft; altitude measuring equipment carried; installation and maintenance procedures and crew navigation procedures and training.

3.18.2.4.1 The inherent obligations placed upon crews and operators of UK registered aircraft by the NAT RVSM airspace requirements can be summarized as follows:

a) The flight **MUST** have prior approval for operations in NAT RVSM airspace;
b) the approved aircraft minimum altitude measuring installation **MUST** be serviceable and **MUST** have been checked for accuracy prior to entry into RVSM airspace;
c) whilst in RVSM airspace the approved operating procedures **MUST** be adhered to. Except in emergency, diversions from the ATC cleared Flight level **MUST NOT** be made without prior approval of the controlling ATC Unit;
d) if subsequent unserviceability reduces the altitude measuring capability below the required minimum for RVSM operations after entry into RVSM airspace then the controlling ATC Unit **MUST** be advised so as to allow for any adjustments of separation from adjacent aircraft;
e) there **MUST** be a high standard of supervision, monitoring and cross checking of altimeters to prevent a large discrepancy from the cleared flight level (less than 300 FT);
f) an automatic Altitude Keeping Device (AKD) should be operative and engaged during level cruise, except when circumstances such as the need to re-trim the aircraft or the onset of turbulence, require disengagement. In any event, adherence to cruise altitude should be accomplished by reference to one of the two primary altimeters;
g) there **MUST** be a high standard of co-ordination with ATC Units to ensure that misunderstandings over the cleared flight level do not occur.

3.18.2.5 Westbound flights submitting an 'RCL' to Shanwick to enter North Atlantic (NAT) Reduced Vertical Separation Minima (RVSM) airspace may be invited to confirm that they have been approved for operating within RVSM airspace by their State of Registry or their State of Operator.

3.18.2.5.1 The submission of a Flight Plan alone does **NOT** constitute NAT RVSM operating approval. Pilots/Operators unable to provide such confirmation will not be permitted to enter NAT RVSM airspace and will be issued an Oceanic approval to operate outside RVSM airspace (below FL 290 or above FL 410). Details of the flight will be passed to the NAT Central Monitoring Agency (CMA) for follow-up action by the relevant State Aviation Authority.

3.18.2.6 **Altitude Measuring Equipment or Features for Unrestricted RVSM airspace Operations**

3.18.2.6.1 In order to justify consideration for State approval for future unrestricted operation in the RVSM airspace, an aircraft will be required to be equipped as follows:

a) at least two primary altitude measurement systems meeting the MASPS requirements;
b) a static source error correction (SSEC)/position error correction (PEC) must be applied automatically;
c) an altitude deviation warning system that shall alert when the altitude displayed to the flight crew deviates from selected altitude by more than a nominal value. This nominal value shall not be greater than 300 FT. For aircraft whose application for type certification was made after 1 January 1997, the nominal value should not be greater than 200 FT. The overall equipment tolerance in implementing this nominal value shall not exceed 50 FT; and
d) an automatic altitude-alerting device which is required to be capable of controlling altitude within +/- 65 FT of the selected altitude, when the aircraft is operated in straight and level flight, under non-turbulent, non-gust conditions.

## ENR 2.2 OTHER REGULATED AIRSPACE (continued)

3.18.2.7 Suspension of RVSM due to actual or forecast Turbulence

3.18.2.7.1 On receipt of information indicating actual or forecast Turbulence, ATC should take the following action:

a) if possible, establish increased vertical, longitudinal or lateral separation; or
b) suspend RVSM operations in the affected area.

3.18.3 In order to assist operators and crews to achieve the required standard of navigation and height keeping accuracy two documents have been published:

a) Guidance and Information Material concerning Air Navigation in the NAT Region, including RVSM, is produced by and available from the ICAO Paris Office. The material in this Document deals primarily with planning and management of operations in the NAT Region and is mainly addressed to States and Operators;
b) The North Atlantic Operations and Airspace Manual. This manual has been developed specifically for use by pilots intending to operate in the NAT HLA. This manual is available for download from the EUR/NAT Regional Office section of the ICAO website www.icao.int.

3.18.4 Operators of UK registered aircraft intending to fly in NAT High Level Airspace can obtain further information on the measures necessary to gain CAA approval from the following:

Equipment and Installation Approvals:

The Chief Surveyor,

Post: CAA Safety Regulation Group, Aviation House, South Area, London Gatwick Airport, West Sussex RH6 0YR.
Phone: +44-(0)1293-573362;

Operational Approvals:

Post: Civil Aviation Authority, Flight Operations Department (Attn: Flight Operations Policy), Aviation House, 1W, South Area, London Gatwick Airport, West Sussex RH6 0YR.
Phone: +44-(0)1293-573521
Fax: +44-(0)1293-573991;

Further Information on other aspects of MNPS/RVSM Operations (including height-monitoring requirements):

Post: North Atlantic Central Monitoring Agency, c/o NATS Limited, Room G41, Atlantic House, Fresson Avenue, Prestwick, Ayrshire, KA9 2GX.
Phone: +44-(0)1292-692412 HMU Status (recorded message)
+44-(0)1292-692760
Fax: +44-(0)1292-692754
Email: natcma@nats.co.uk

### 3.19 Routes Between Northern Europe and Spain/Canaries/Lisbon FIRs

3.19.1 Operators are recommended to Flight Plan using routes T9, T13, T16, T213 and T290 as published in ENR 3.3 Other Routes.

3.19.2 For fuel planning purposes, operators should note that optimum cruising levels may not be available on T9, T13, T16, T213 and T290.

***Note:*** *Operators should not file using the route designator T13, T16, T213, and should file full route coordinates for these routes.*

### 3.20 Alerting and Search and Rescue Services

(See GEN 3.6 of the UK AIP).

### 3.21 Procedures — Westbound

a) Westbound flights are advised to flight plan the routes through UK Airspace that are offered by the Standard Routes Document published on the AIS CD-ROM.
b) Westbound flights departing from UK airports that are not listed are to flight plan via the published UK Upper ATS route structure.
c) For the UK Upper ATS Routes for the Westbound North Atlantic Flow refer to the Standard Routes Document published on the AIS CD-ROM.

### 3.22 Procedures - In the Event of Shanwick Oceanic Area Control Centre Evacuation

3.22.1 Scottish and Oceanic Area Control Centre includes both Scottish Radar and Shanwick Oceanic Control. Should Shanwick OAC be evacuated the potential would exist for a major disruption to Air Traffic Control (ATC) within the Shanwick OCA and Scottish

# ENR 2.2 OTHER REGULATED AIRSPACE (continued)

Radar units. The HF radio communications for the Shanwick Oceanic Centre are remotely located, so will not be affected.

3.22.2 In the event that Shanwick OAC is evacuated, Gander Oceanic will assume responsibility for the provision of Air Traffic Services (ATS) within the Shanwick OCA to the best of their ability.

3.22.3 As soon as possible after evacuation a contingency message will be sent to the operators and agencies that receive the NAT track message. A NOTAM shall also be issued. Recipients of both messages shall advise the affected traffic.

3.22.4 On receipt of the contingency message pilots are requested to broadcast to other flights on 121.500 and 123.450 MHz. A listening watch on these frequencies must be maintained.

3.22.5 HF congestion is likely. Communications should be kept to a necessary minimum. Unnecessary route changes will not be issued.

3.22.6 The procedures outlined below are to be used as guidance for pilots in the immediate aftermath of a sudden withdrawal of the ATC service as described above.

3.22.7 **Procedures - Westbound Flights**

3.22.7.1 Due to the uncertainty surrounding the contingency situation pilots are strongly advised to re-route around the Shanwick OCA or to land at an appropriate aerodrome.

3.22.7.2 **Westbound Flights within Scottish FIR**

3.22.7.2.1 If Scottish radar is subject to evacuation also, pilots of flights operating within the Scottish FIR may elect to continue, the flight must be operated in accordance with the last submitted and acknowledged 'RCL' from eastern boundary until last specified route point, normally landfall.

3.22.7.2.2 Whilst operating within the Scottish FIR all flights are requested to make position reports on the last assigned frequency, stating position, level and next fix.

3.22.7.2.3 Flights may also elect to contact Scottish FIR aerodromes for assistance.

3.22.7.2.4 The following communications procedures have been developed in accordance with the Traffic Information Broadcast by Aircraft (TIBA) procedures recommended by ICAO (Annex 11 - Air Traffic Services, Attachment C).

At least 3 minutes prior to the commencement of a climb or descent the flight should broadcast on the last assigned frequency, 121.500, 243.000 and 123.450 MHz the following:

ALL STATIONS
(callsign)
(direction)
DIRECT FROM (landfall fix) TO (Oceanic entry point)
LEAVING FLIGHT LEVEL (number) FOR FLIGHT LEVEL (number) AT (distance)(direction) FROM (Oceanic entry point) AT (time)

When the level change begins, the flight should make the following broadcast:

ALL STATIONS
(callsign)
(direction)
DIRECTION FROM (landfall fix) TO (Oceanic entry point)
LEAVING FLIGHT LEVEL (number) NOW FOR FLIGHT LEVEL (number)

When level, the flight should make the following broadcast:

ALL STATIONS
(callsign)
MAINTAINING FLIGHT LEVEL (number)

3.22.7.3 **Westbound Flights within the Shanwick Oceanic Control Area**

3.22.7.3.1 Gander Oceanic shall endeavor to provide an ATC service throughout the Shanwick OCA as soon as evacuation commences.

3.22.7.3.2 All flights should establish communication with the next agency at the earliest opportunity stating current position, cleared flight level, next position and estimate, and subsequent position. This also applies to flights using automated position reports (ADS/FMC) because those reports may not have been received by the next agency.

3.22.7.3.3 When ADS equipped flights are notified of a Shanwick evacuation they must revert to voice position reporting until clear of Shanwick OCA, or notified otherwise. Pilots should note that they may be asked to log-on to CYQX when within the Shanwick OCA.

## ENR 2.2 OTHER REGULATED AIRSPACE (continued)

They should not initiate this action until instructed to do so.

3.22.7.3.4 Any flights involved in level changes should complete the manoeuvre as soon as possible in accordance with the clearance.

3.22.7.3.5 If unable to establish radio contact, flights may use SATCOM voice or satellite telephone to provide position reports.

3.22.7.3.6 Flights may request their flight dispatch offices to forward position reports, if sending position reports to multiple ATS Units or if otherwise unable to forward position reports.

3.22.8 **Procedures for Eastbound Flights within the Shanwick Oceanic Control Area**

3.22.8.1 Gander Oceanic shall endeavour to provide an ATC service throughout the Shanwick OCA as soon as evacuation commences.

3.22.8.2 Flights operating with a received and acknowledged Oceanic Clearance will be expected to continue in accordance with the last clearance issued unless otherwise advised by ATC.

3.22.8.3 When ADS equipped flights are notified of a Shanwick evacuation they must revert to voice position reporting until clear of Shanwick OCA, or notified otherwise. Pilots should note that they may be asked to log-on to CYQX when within the Shanwick OCA. They should not initiate this action until instructed to do so.

3.22.8.4 Any flights involved in level changes should complete the manoeuvre as soon as possible in accordance with the clearance.

3.22.8.5 If unable to establish radio contact, flights may use SATCOM voice or satellite telephone to provide position reports.

3.22.8.6 Flights making automatic position reports are required to make voice position reports whilst within the Shanwick OCA, unless advised otherwise.

3.22.8.7 Communications with the next ATSU should be established at the earliest opportunity. Where no contact can be established, Shanwick Radio should be contacted on HF for advice.

3.22.8.8 **Procedures for Eastbound Flights entering the Scottish FIR**

3.22.8.8.1 Unless instructed otherwise, flights entering the Scottish FIR should use the following contingency routes:

a) RATSU DCT GUNPA contact Reykjavik Oceanic Control - 125.500 MHz;
b) LUSEN DCT ELKOG DCT ORVIK contact Polaris Control - 135.675 MHz;
c) ATSIX DCT AKIVO DCT KLONN contact Polaris Control - 136.275 MHz;
d) ORTAV DCT ODPEX DCT ELSAN contact Copenhagen Control - 134.680 MHz;
e) BALIX DCT NINEX DCT ASKAM contact Maastricht Control - 132.085 MHz;
f) ADODO DCT AMTAP DCT ROKAN DCT TOPPA contact Maastricht Control - 132.085 MHz;
g) ERAKA DCT ETSOM DCT ERKIT contact London Control - 128.130 MHz;
h) ETILO DCT EVNAL DCT DCS DCT LAKEY contact London Control - 132.860 MHz;
i) GOMUP DCT GINGA DCT SOSIM contact London Control - 135.580 MHz.

3.22.8.8.2 Flights operating close to the Reykjavik or Shannon northern boundaries should, where possible, establish communications with those units in order to negotiate a re-route to avoid the Scottish FIR.

3.22.9 **Procedures for Flights Flight Planned to enter Shanwick OCA from other Oceanic Centres**

3.22.9.1 Flights within Reykjavik or Santa Maria Oceanic airspace, can anticipate a large re-route to avoid the Shanwick OCA and Scottish FIR. Reykjavik and Santa Maria will issue advice on procedures to be followed.

### 3.23 Enquiries and Comments

3.23.1 Enquiries and comments about ATS procedures applicable to the Shanwick OCA should be addressed to:

Manager PC Procedures and Development,

Post: Room F-059, NATS Prestwick, Prestwick Centre, Fresson Avenue, Prestwick, Ayrshire, KA9 2GX.

3.23.2 Advice on day-to-day operations is available from Shanwick Oceanic Watch Manager Prestwick.

Phone: 01294-655300.

### 3.24 Format of NAT Company Preferred Routing Messages (CPR PRM)

**Westbound:**

(PRIORITY) (DESTINATION ADDRESS)
(DATE TIME OF ORIGIN) (ORIGIN ADDRESS)

(MESSAGE TYPE) — (COMPANY) — (WESTBOUND) — (YYMMDD AT 30W)
(DEP / DEST) (FIRST UK POINT) (ANCHOR POINT) (OCA RPS) (LANDFALL)
(INLAND FIX) (NUMBER OF FLIGHTS (01 — 99))

***Note:*** *If there is no INLAND FIX then the latitude at 80W is to be used.*

## 3.25 Format of NAT Company Preferred Route Flight Plan day minus 1 (CPR FPL-1)

3.25.1 The Company Preferred Route Flight Plan day minus 1 (FPL-1) format utilises the standard ICAO flight plan (FPL) format and a predetermined Company Preferred Route Identifier (CPR_ID).

3.25.2 Upon receipt of a flight plan at a dedicated AFTN address (EGGXGATT) the Shanwick Automated Track Tool (ATT) system extracts the Oceanic Route portion from the Company Preferred Route Flight Plan day minus 1 (FPL-1), and correlates this with airline scheduled data which corresponds to the Company Preferred Route Identifier (CPR_ID). This provides Shanwick with both route and traffic loading information accordingly.

3.25.3 The Callsign field of the Company Preferred Route Flight Plan day minus 1 (FPL-1) is utilised to indicate the Company Preferred Route Identifier (CPR_ID). The CPR_ID is a unique designator which must be pre-configured with Shanwick to indicate the departure point and destination pairing.

3.25.4 The preferred route is detailed in the Company Preferred Route (FPL-1) as per a normal flight plan. The Date of Flight (DOF field) in field 18 shall indicate the flight is for the next day's OTS Design.

Examples:

The CPR_ID is a seven character code defined as follows:

| | | |
|---|---|---|
| Airline ICAO Code | British Airways: | **BAW** |
| **P**referred Route Indicator | P (does not change) | **P** |
| **W**estbound | W | **W** |
| Company Preferred Route ID Number (00-99) | Correlates to set departure/destination | **01** |
| **The resulting CPR_ID in this example is BAWPW01** | | |

**Example 1 –** ***(Indicating CPR_ID 01 for British Airways)***

CPR (FPL-1) sent to EGGXGATT on the 04/08/2016 for a Westbound OTS Design for the 05/08/2016.

3.25.5 **Initial Configuration and Setup for Company Preferred Route Messages FPL-1 Format**

3.25.5.1 Operators who would like to send Company Preferred Route messages via FPL-1 format are required to register by email at CPR@nats.co.uk. Registration is required so that configuration elements are completed prior to message sending.

3.25.5.2 During registration Company Preferred Identifiers (CPR_IDs) will be determined for each scheduled departure point and destination pairing to be flown by the airline and a start date will be provided by the Shanwick.

**Example of CPR_ID TABLE**

| ICAO AL | IATA AL | Carrier1Name | Market Pair (Airport) | Dep Airport | Arr Airport | Unique Market Pair (Route) Name (CPR_ID) |
|---|---|---|---|---|---|---|
| BAW | BA | British Airways | ANU-LGW | LGW | ANU | BAWPW01 |

Route Remarks:
NALAX-ERKIT CDR H24.
Rest of L602 - PERM.

The portion of L602 between GOW and TIR is for use by traffic climbing to or descending from the Shanwick OCA Boundary and the NOTA and below FL 195 is Class E and TMZ and extends 5 NM either side of the centre-line. However, within the confines of the Scottish TMA, L602 assumes the airspace classification of the Scottish TMA.

Note: Transponder carriage and operation required within that part of L602 notified as Class E and TMZ.

| △ WALLASEY VOR/DME (WAL) | 532330.97N 0030804.06W | | | | | Extremity of N862. |

Route Remarks:
SIDHO - SKERY CDR H24.

PACSE - ENHEL below FL 195 only available for flight planning Fri 1700 - Mon 0745 (0645).

PACSE - SIDHO above FL 195 only available for flight planning Mon-Thu 1700-0830 (1700-0730) and Fri (or the day preceding a PH) 1700 to Mon (or the day following a PH) 0830 (0730).

Due to ATC operational requirements, the cruising level allocation between NOKIN and TONQU is inappropriate to the MAG Track.

Route Remarks:
This route to be flown on a limited basis only - Availability of UN864 btn DCS - WAL may be subject to MoD requirements at certain times – such requirements will normally be of short duration and will be announced by London ACC or Scottish ACC as appropriate. The alternative route will be 'as directed by ATC'.
Due to ATC operational requirements, the cruising level allocation between MONTY and WAL and between TLA and DCS is inappropriate to the MAG Track.

| △ KOLID | 533425.70N 0024520.23W | | | | | Extremity of Y70.<br>Intersection with (U)L70. |

Route Remarks:
The portion of Y70 between OTBED and BATLI below FL 195 is Class A and extends 5 NM either side of the centre-line.

The portion of airspace formed by joining positions:

L975 Crossing Area

533835N 0013503W - 534007N 0011937W -
534626.98N 0011937.00W - 534308.41N 0011615.09W -
534127.82N 0010357.97W - 533059N 0010932W -
532845N 0013215W - 533835N 0013503W,
from AWY base level to an upper limit of FL 120, occasionally to FL 190 on request;

is notified for the purposes of SERA.6001(a) Classification of Airspaces in accordance with the conditions established in the Letter of Agreement (LOA) btn the Derbyshire and Lancashire (Camphill) Gliding Club, British Gliding Association (BGA), Leeds Bradford International Airport, and Scottish ACC.

The area of Y70 bounded by the co-ordinates:
533142N 0010734W - 533119N 0010614W -
533109N 0010751W - 533142N 0010734W, has a lower limit of FL 85.

The area of Y70 bounded by the co-ordinates:
534402N 0012252W - 534134N 0010443W -
534007N 0011937W - 534402N 0012252W, has a lower limit of FL 125.

Route Remarks:
CDR FL 225 and above H24.
Below FL 225 - PERM.

Due to ATC operational requirements, the cruising level allocation above FL 195 between ORIST and VEXEN is inappropriate to the MAG Track.

See also ENR 1.1, paragraph 1.1.3.

| (RNAV 5) | 008°/188° | 3.0 NM | FL 195 / FL 45 | odd FL 190 / FL 110 | even FL 180 / FL 120 | Class E and TMZ.<br>(See Note)<br><br>Scottish ACC<br>Freq: 134.850 (All Levels). |
| ▲ MOCHA | 593255.50N 0012159.47W | | | | | Acft in communication with Sumburgh ATC must report OHD MOCHA unless otherwise authorized by that Unit. |
| (RNAV 5) | 008°/188° | 20.0 NM | FL 195 / FL 45 | odd FL 190 / FL 110 | even FL 180 / FL 120 | Class E and TMZ.<br>(See Note)<br><br>Within the confines of the Sumburgh CTR/CTA, Y905 assumes the airspace classification of the Sumburgh CTR/ CTA.<br><br>Scottish ACC<br>Freq: 134.850 (All Levels). |
| △ WAFIL | 595243.00N 0011711.00W | | | | | Extremity of Y905. |

Route Remarks:
Although coverage of SUM VOR meets ICAO criteria, it is nevertheless deficient along the alignment of Y905 at low level in view of the distance btn SUM and PETOX. During commissioning flight inspection ICAO mnm field strength at FL 70 occurred to 90 NM and it is estimated it would occur above approximately FL 100 overhead PETOX. Therefore in line VOR navigation beyond SUM VOR 50D to PETOX may not comply with RNP 5.

Transponder carriage and operation required.

| △ STORNOWAY VOR/DME (STN) | 581225.02N 0061058.97W | | | | | Extremity of Y906. |

Route Remarks:
Inverness Radar provide a radar service for tfc inbound to and outbound from Inverness via Y906 during the promulgated hours of Inverness Radar as published in UK AIP AD 2.EGPE AD 2.18 (and as amended by NOTAM).

Tfc inbound to Inverness via Y906 has a clearance limit of GARVA, descent clearance will be issued by Scottish ACC to be level by GARVA unless otherwise instructed by ATC. Scottish ACC will instruct tfc when to contact Inverness Radar (122.605), this will normally be at or before 40 NM from RIMOL.

Transponder carriage and operation required.

| △ LASNO | 483554N 0090000W | | | | | Extremity of T9. |

Route Remarks:
FL Series not applicable. Operators should file Even Levels for southbound transits but may be allocated Odd Levels.

Flight Plan: For RNP2 serviceability, qualification and authorisation, file: Field 10a - GRZ; Field 18 - NAV/RNP2. (See UK AIP ENR 2.2 for further details).

Exemption from FANS 1/A Carriage Requirement.

Requirement for ADS-B Out 1090 MHz Carriage.

Requirement for HF and VHF Carriage.

Routine communications are to be conducted with Shanwick Radio via assigned frequencies/channels using HF. 128.360 MHz is reserved for intervention or emergency purposes only and is to be continuously monitored.

Requirements to monitor 121.500 MHz and to broadcast on 121.500 MHz during in-flight contingencies, contained within UK AIP ENR 2.2 remain unchanged.

North Atlantic Strategic Lateral Offset Procedure (SLOP) does not apply to flights operating along T9. Aircraft shall maintain track along the centre-line of this route.

# ENR 5 NAVIGATION WARNINGS

## ENR 5.1 PROHIBITED, RESTRICTED AND DANGER AREAS

**Airspace Restrictions - Manned and Unmanned Aircraft Systems (UAS)**

Unless otherwise stated either in the remarks section or associated SI the Navigational restrictions listed below with an identification which starts with "EGD", "EGP" or "EGR" are applicable to **both** manned **and** unmanned aircraft systems. Restrictions listed below with an identification which starts with "EGRU" are applicable to **Unmanned Aircraft Systems only**.

**Unmanned Aircraft Systems (UAS) - Data File**

To satisfy the requirement for the provision of a dataset of UAS Airspace Restrictions an electronic file is available by selecting the UAS Airspace Restrictions File (ENR 5.1) link from the list available on the current IAIP website (updated each AIRAC).

**Airspace Restrictions - Unmanned Aircraft Systems (UAS)**

Unless otherwise stated either in the remarks section or associated SI the Navigational restrictions listed above with an identification which starts with "EGD", "EGP" or "EGR" are applicable to **both** manned **and** unmanned aircraft systems. Restrictions listed above with an identification which starts with "EGRU" are applicable to **Unmanned Aircraft Systems only**.

**Unmanned Aircraft Systems (UAS) - Data File**

To satisfy the requirement for the provision of a dataset of UAS Airspace Restrictions an electronic file is available by selecting the UAS Airspace Restrictions File (ENR 5.1) link from the list available on the current IAIP website (updated each AIRAC).

**INTENTIONALLY BLANK**

***Note 1:*** *(R) Receiver. (T) Tanker. Secondary A/A TACAN channels are the reverse of the primary channels.*

***Note 2:*** *Swanwick (Mil); crews are strongly encouraged to file a Flight Plan; Swanwick (Mil) Flight Plan address EGZYOATT. Failure to file a Flight Plan may result in delays.*

***Note 3:*** *Discrete Frequencies for AAR towline use are Primary 343.650, Secondary 264.925 and Tertiary 315.600.*

## ENR 5.2 MILITARY EXERCISE AND TRAINING AREAS AND AIR DEFENCE IDENTIFICATION ZONE (ADIZ) (continued)

***Note 4:*** *AARA 10 East and AARA 10 West. AARA 10 East is only available for Tanker-Trails routeing from UK to foreign destinations or vice versa. AARA 10 West is positioned clear of the main North/South Axis routes N862, (U)N864 and UN22 and is available for routine AAR sorties in UK. As AARA 10 and AARA 11 overlap, Tanker Plans will ensure that reservations are de-conflicted either by time or by use of different altitude reservations.*

***Note 5:*** *AARA 13. Flight trial profiles may dictate that the RV takes place outside AARA 13. It remains the responsibility of the Tanker Controller to co-ordinate with other airspace users as necessary.*

***Note 6:*** *In Areas designated as Permanently available for Air-to-Air Refuelling, the amount of warning concerning refuelling operations can be so minimal as to preclude notification by normal methods.*

***Note 7:*** *Where Air-to-Air Refuelling Areas lie inside Free Route Airspace or are coincident with ATS Routes, civil / military co-ordination procedures are applied to minimise disruption to the planned flight profiles or the aircraft concerned.*

***Note 8:*** *Where AARAs are required between FL 195 and FL 245 outside the normal hours of TRAs 001-008 (See ENR 5.2-2/3), the appropriate TRAs are booked via the MAMC - Managed Airspace before 1100 hours at D-1.*

# ENR 5.4 AIR NAVIGATION OBSTACLES

**En-route Obstacles**

To satisfy the requirement for the provision of Area 1 Obstacles (the height of which is 100 M or more AGL), an electronic file is available by selecting the Area 1 Obstacles File (ENR 5.4) link from the list available on the Current IAIP website (updated each AIRAC).

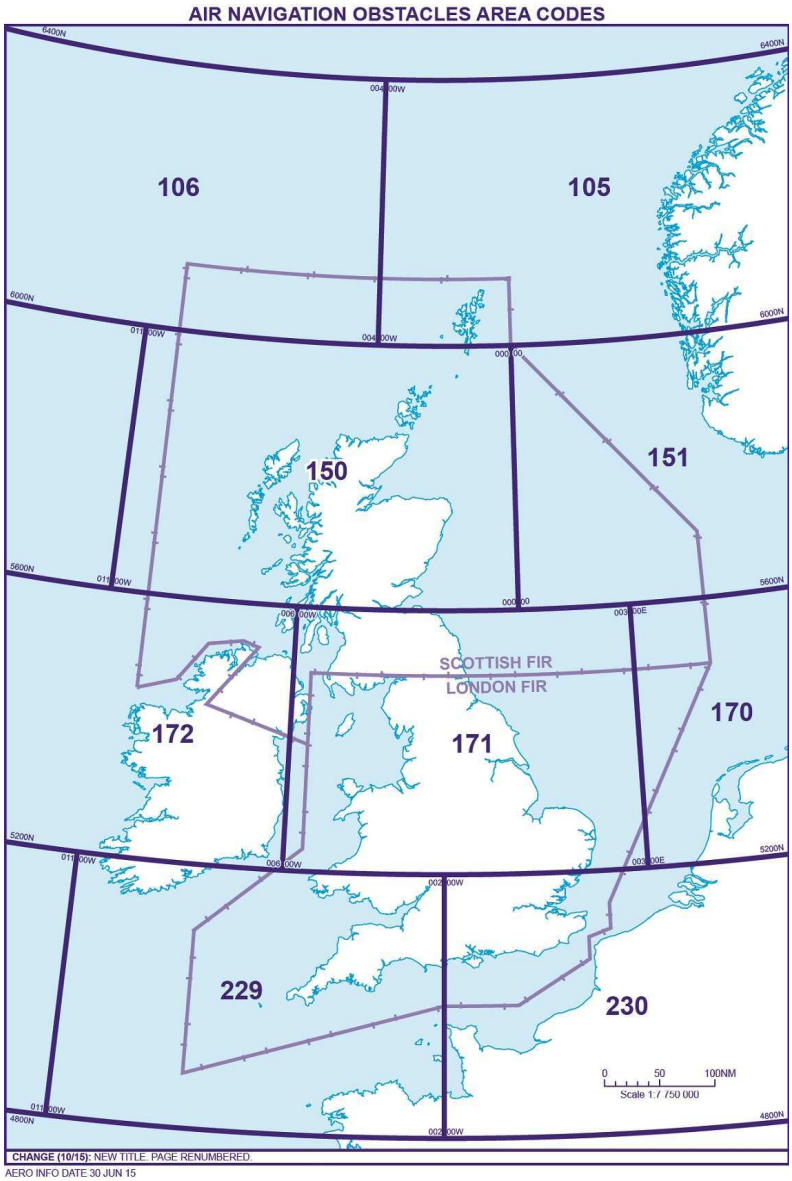
http://www.nats.aero/ais.

**Mountains and Hills with Warning Lights**

| Designation/ Identification | Obstacle Type | Obstacle Position | Elevation/Height | | Obstacle Lighting | Remarks |
|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | | 5 | 6 |
| | Bohill Mt, Co Antrim | 543600N 0060554W | 871 FT | UNKNOWN | Yes Red | |
| | Church Hill, Co Fermanagh | 542745N 0075403W | 1126 FT | UNKNOWN | Yes Red | |
| | Bredon Hill, Worcestershire | 520328N 0020304W | 1046 FT | UNKNOWN | Yes Red | |

Those conspicuous mountains and hills listed above are regarded as hazardous to aviation and are marked by red obstacle lights.

**Air Navigation Obstacles Area Codes**



**INTENTIONALLY BLANK**

# ENR 5.6 BIRD MIGRATION AND AREAS WITH SENSITIVE FAUNA

## 1 Bird Migration

1.1 There are no well defined heavily used bird migratory routes within United Kingdom airspace at any time of the year. Bird migration to and from the United Kingdom occurs largely in the autumn and winter on broad fronts in streams running E–W and N–S. The density of bird movements is greatest in SE England where these two fronts cross. Most migrating birds fly below 5000 FT.

## 2 Areas with Sensitive Fauna

2.1 As elsewhere in the world, offshore islands, headlands, cliffs, inland waters and shallow estuaries attract flocks of birds for breeding, roosting and feeding at various times of the year. Within 20 NM or so of such locations concentrations of birds flying mostly below 1500 FT may be encountered (see ENR 6.78 and ENR 6.79).

2.2 In order to lessen the risk of bird strikes, pilots of low flying aircraft should, whenever possible, avoid flying at less than 1500 FT above surface level over areas where birds are likely to concentrate. Where it is necessary to fly lower than this, pilots should bear in mind that the risk of a bird strike increases with speed (it is a fact that birds rarely hit an object moving slower than 80 knots). Apart from endangering aircraft by flying close to bird colonies, the breeding of the birds may be upset and the practice should be avoided on conservation grounds. It should also be appreciated that, especially in the case of sea bird colonies, concentrations of birds may be soaring on lee waves downwind of the areas where they breed.

## 3 Bird Sanctuaries

3.1 A Bird Sanctuary is airspace of defined dimensions within which large colonies of birds are known to breed.

3.2 Pilots are specifically requested to avoid the Bird Sanctuaries listed below, especially during any stated breeding season.

## 4 Release of Racing Pigeons

4.1 In agreement with the Royal Pigeon Racing Association concerning the release of large numbers of racing pigeons:

a) There will be no release of racing pigeons within a radius of 7 NM from the following airports:

| | | |
|---|---|---|
| Aberdeen Dyce | Humberside | Manchester † |
| Belfast Aldergrove | Inverness | Newcastle |
| Birmingham | Kirkwall | Norwich |
| Bournemouth | Leeds Bradford | Prestwick |
| Bristol | Liverpool | Southampton |
| Cardiff | London Gatwick | Southend |
| East Midlands | London Heathrow | Sumburgh |
| Edinburgh | London Luton | Teesside International |
| Glasgow | London Stansted | |

† See AD Section for further information

b) For other aerodromes in the United Kingdom all liberations shall be notified to the SATCO in writing fourteen days prior to the date of release and additionally by telephone 30 minutes before release time. On receipt of the 30 minute warning the SATCO or senior controller on duty may delay the liberation by up to 30 minutes for air traffic control purposes. Exceptionally, the liberation time may be delayed for a longer period.

| VFR ATC CLEARANCE REQUIRED? | | YES | YES | NO | NO |

250 KIAS Not applicable to military aircraft

* Aircraft (including helicopters) may fly at or below 3000FT AMSL, or 1000FT above terrain, whichever is the higher, during day only, at 140KIAS or less, clear of cloud with the surface in sight and a flight visibility of at least 1500metres.
† Aircraft may fly at or below 3000FT AMSL, or 1000ft above terrain, whichever is the higher, during day only, at 140KIAS or less, clear of cloud with the surface in sight and: for aircraft other than helicopters, with a flight visibility of at least 5KM; for helicopters, with a flight visibility of at least 1500metres.
‡ SVFR in CTR only.

Note 1 PORTSMOUTH CTA-6:
During the notified hours of operation of SOLENT CTA the base changes to 5500ft ALT.

Note 2 PORTSMOUTH CTA-11, CTA-15, CTA-16:
Open daily 0830-0930 (0845-0830) and 1730-2130 (1630-2030).

Note 3 PORTSMOUTH CTA-17, CTA-18:
Open daily 0830-0930 (0845-0830) and 1730-2130 (1630-2030).
During the notified hours of operation of SOLENT CTA the base changes to 5500ft ALT.

Note 4 SOLENT CTA:
Mon-Sat 0930-2200 (0530-2100); Sun 0730-2230 (0630-2130).

Note 5 BERRY HEAD CTA-2, CTA-6:
Fri 1600 (1530) - Mon 0745 (0645).

Note 6 PEPZE CTA-2:
Daily between 2000-0700 (1900-0800).
Usage only as directed by ATC.

Note 7 HOLYHEAD CTA-7, HOLYHEAD CTA-16, STRANGFORD CTA-1, 5, 6, 8:
During the notified hours of operation of the Scottish TMA the base of this lower limit of the portions of these CTAs coincident with the ISLE OF MANN CTR/CTA will be FL105.

Note 8 BORDERS CTA 8, YORKSHIRE CTA 15, CTA 16:
Daily from 2000-0700 (1900-0800).

Note 9 BORDERS CTA 4:
Part or all of this airspace may not be available when activity associated with D510, Spadeadam requires access to the area. Non-availability of airspace will be notified to GAT by Scottish ACC.

Note 10 BORDERS CTA 5:
Part or all of this CTA may not be available when the Ministry of Defence (MoD) requires access to the area. Non availability of airspace will be notified to GAT by Scottish ACC.

Note 11 TAY CTA 3, CTA 4, CTA 5:
Sat 0901 - Sun 2359.
Subject to the purchase of SERA.6001(a) Classification of Airspace in accordance with the conditions established in a Letter of Agreement (LOA) between the British Gliding Association (BGA) and Scottish Control (Prestwick).

Note 12 TAY CTA 19, CTA 11, CTA 12, CTA 13, BORDERS, CTA 12, CTA 13, CTA 14:
Lyneholmhead - 13 nm visibility as specified by NOTAM when required for MOD access or by activation of EGDD142.

Note 13 CHANNEL ISLANDS CTR, CTA-1 & TMA Outside hours of Jersey ATC:
Within London FIR - Reverts to Class G.
Within Brest FIR - Airspace adopts the classification appropriate to Airway or uncontrolled airspace designation, as appropriate, as detailed in the France AIP.

Note 14 COTSWOLD CTA 15, CTA 16, CTA 17, CTA 18:
Flexible use of airspace.
Class G between hours 1700-0900 (1600-0800) Monday-Thursday
and 1700-0900 Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G

COTSWOLD CTA 15, CTA 16, CTA 18:
Access restrictions may apply during NOTAM activation of EGD218.

Note 15 BIRMINGHAM CTA 10:
Flexible use of airspace.
Class G between hours 1700-0900 (1600-0800) Monday-Thursday
and 1700-0900 Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G.

Note 16 EAST MIDLANDS CTA 14:
Only available between 0001-0600 (2301-0600).
Outside the published hours of service the airspace reverts to Class G.

Note 17 MORAY CTA 12, CTA 13:
Activation of the airspace will be during notified activation of EGD715/EGD713Z for Exercise Joint Warrior and other large military exercises as notified to facilitate access to the ATS Route N560

Note 18 MORAY CTA 16:
During notified hours of operation of the Sumburgh CTA/CTR the lower limit of MORAY CTA 16 changes to FL100.

Note 19 PEPZE CTA 13, CTA 14, COTSWOLD CTA 15, CTA 17
Part of the airspace of PEPZE CTA 13, CTA 14, COTSWOLD CTA 15, CTA 17 and FL 195, and referred to as the OSSEP Gliding Areas, are notified for the purposes of SERA.6001(a) Classification of Airspace in accordance with conditions established in a Letter of Agreement (LOA) between the British Gliding Association (BGA) and London ACC, Swanwick Mil and Scottish ACC.
MADLEY Box bounded by great circle lines joining: 520734N 00257449W ;
5207126N 0024624W ; 5156N 00246W ; 5157127N 00256359W ; 5207349N 00257449W.
OSSEP Gliding Area bounded by great circle lines joining: 5158N 00247W ;
5158402N 00247W ; 5158402N 00243W ; 5159N 00243W ; 5159N 00250E ; 5157201N 00253E ;
5157201N 00253E ; 5158N 00247W.
During periods of activation of these areas ATC will direct aircraft to remain clear of the active area.

CHANGE (9/25): DONCASTER SHEFFIELD AIRSPACE REMOVED.

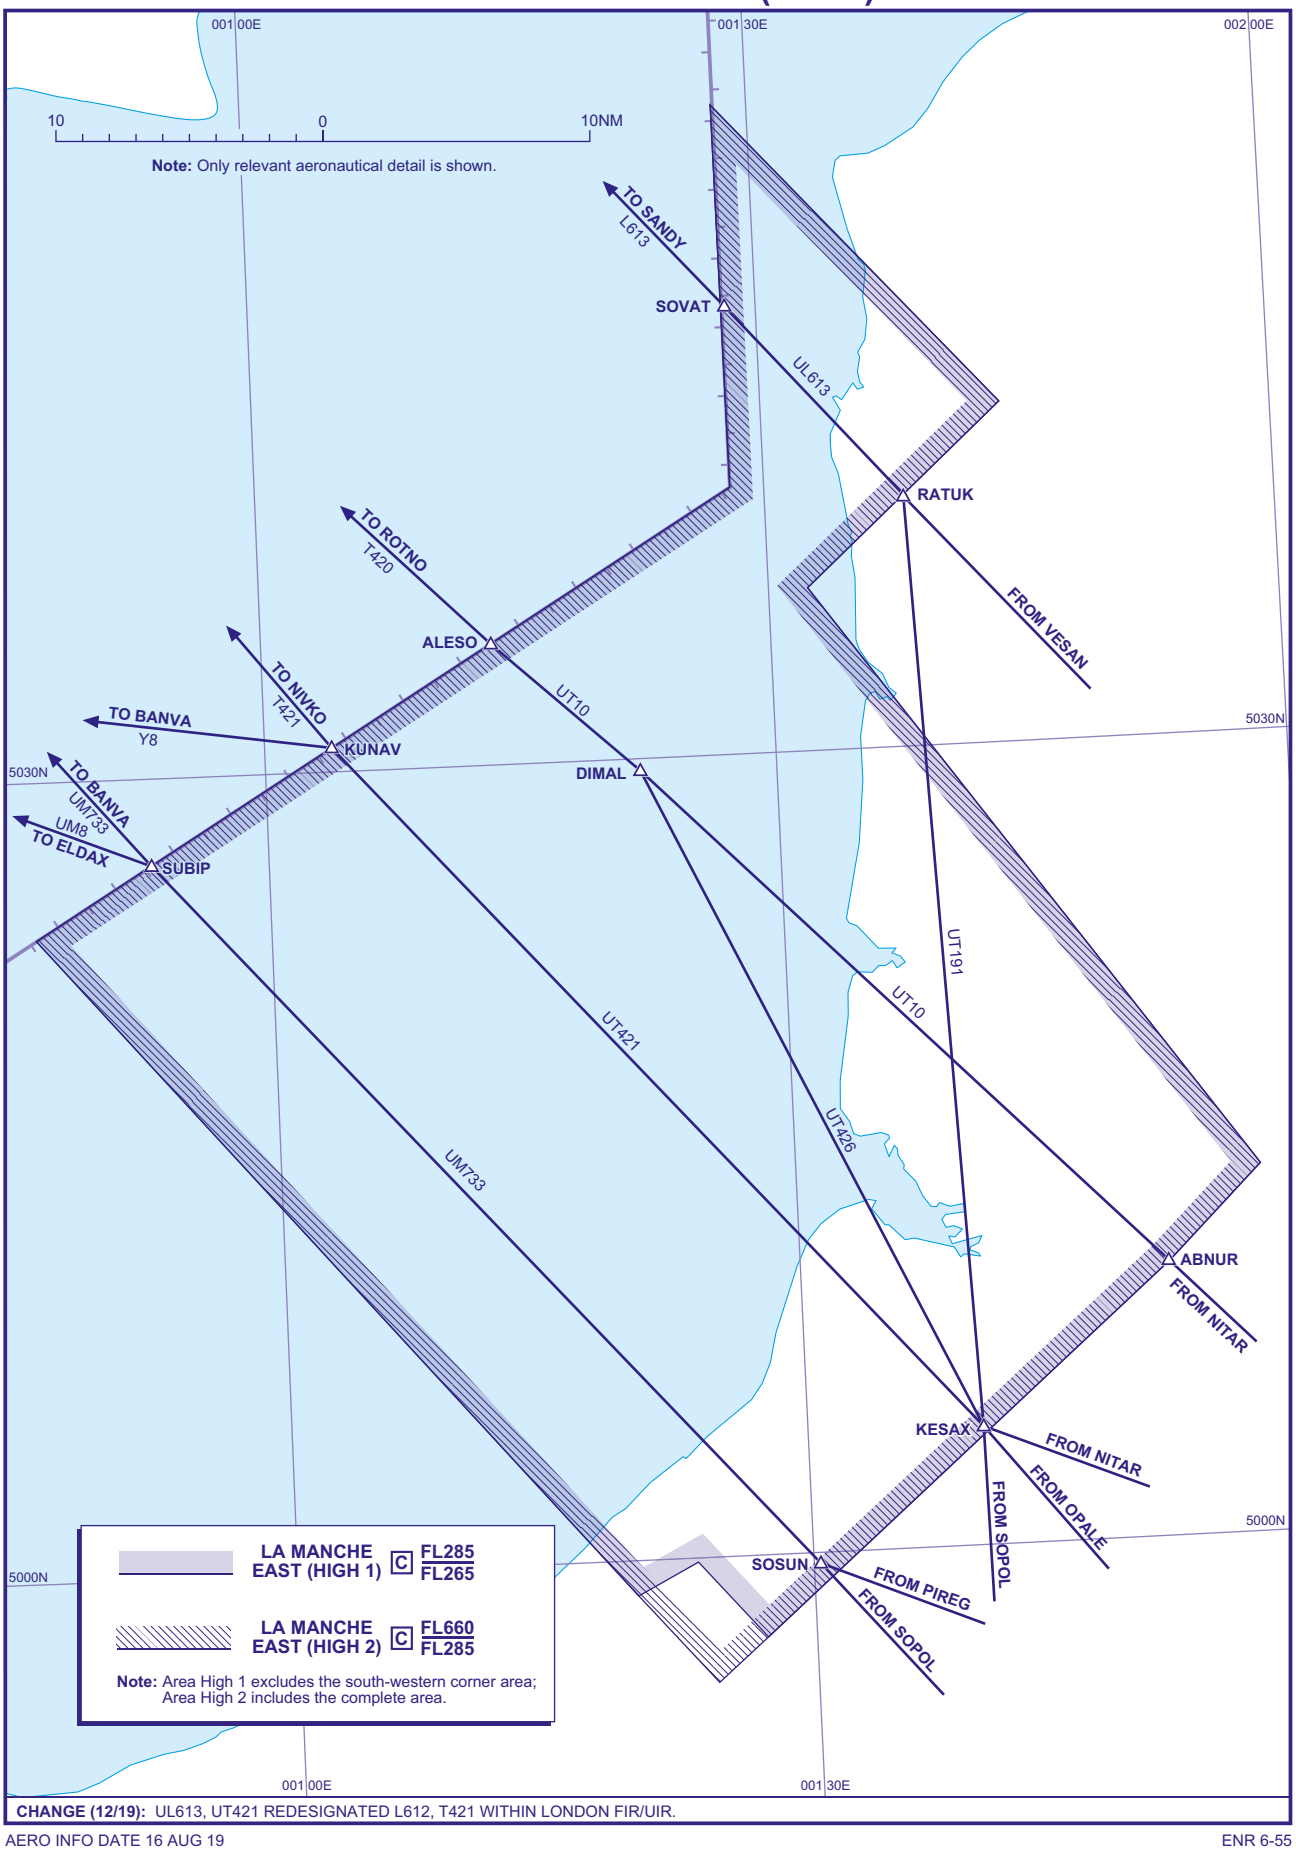
# DELEGATION OF ATS RESPONSIBILITIES - LA MANCHE EAST (HIGH)

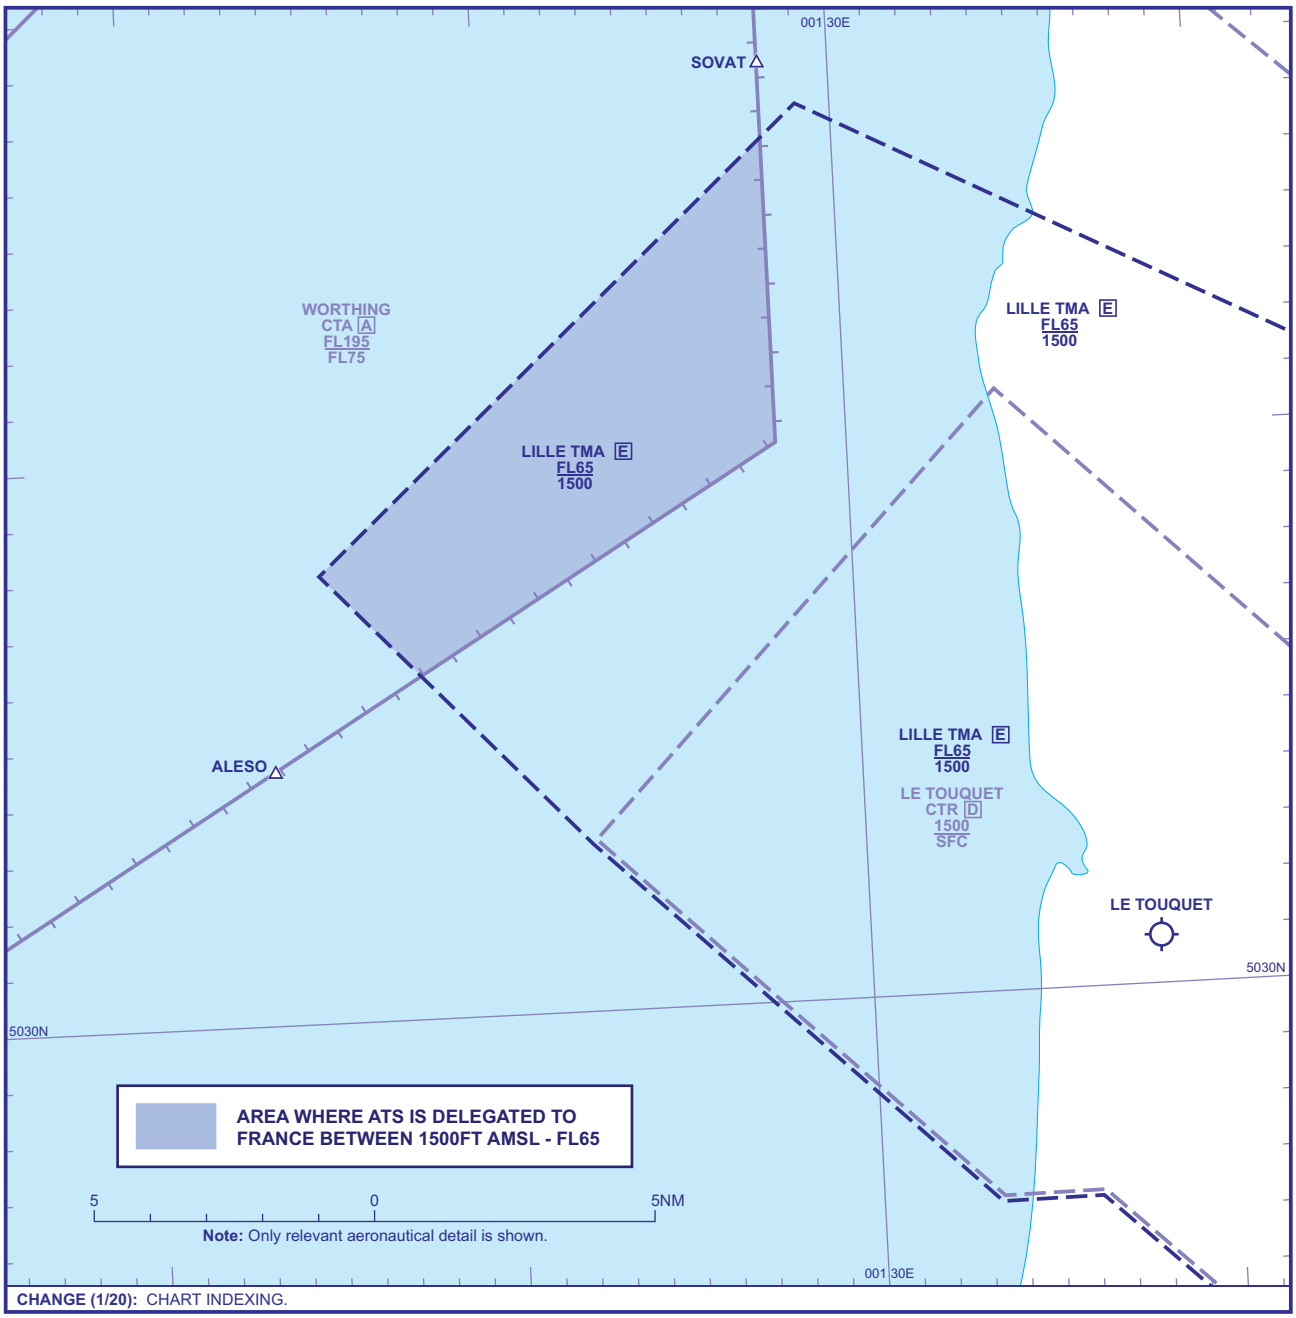


**CHANGE (12/19):** UL613, UT421 REDESIGNATED L612, T421 WITHIN LONDON FIR/UIR.

AERO INFO DATE 16 AUG 19

ENR 6-55

# DELEGATION OF ATS RESPONSIBILITIES - SOUTH EASTERN SECTION OF THE ENGLISH CHANNEL

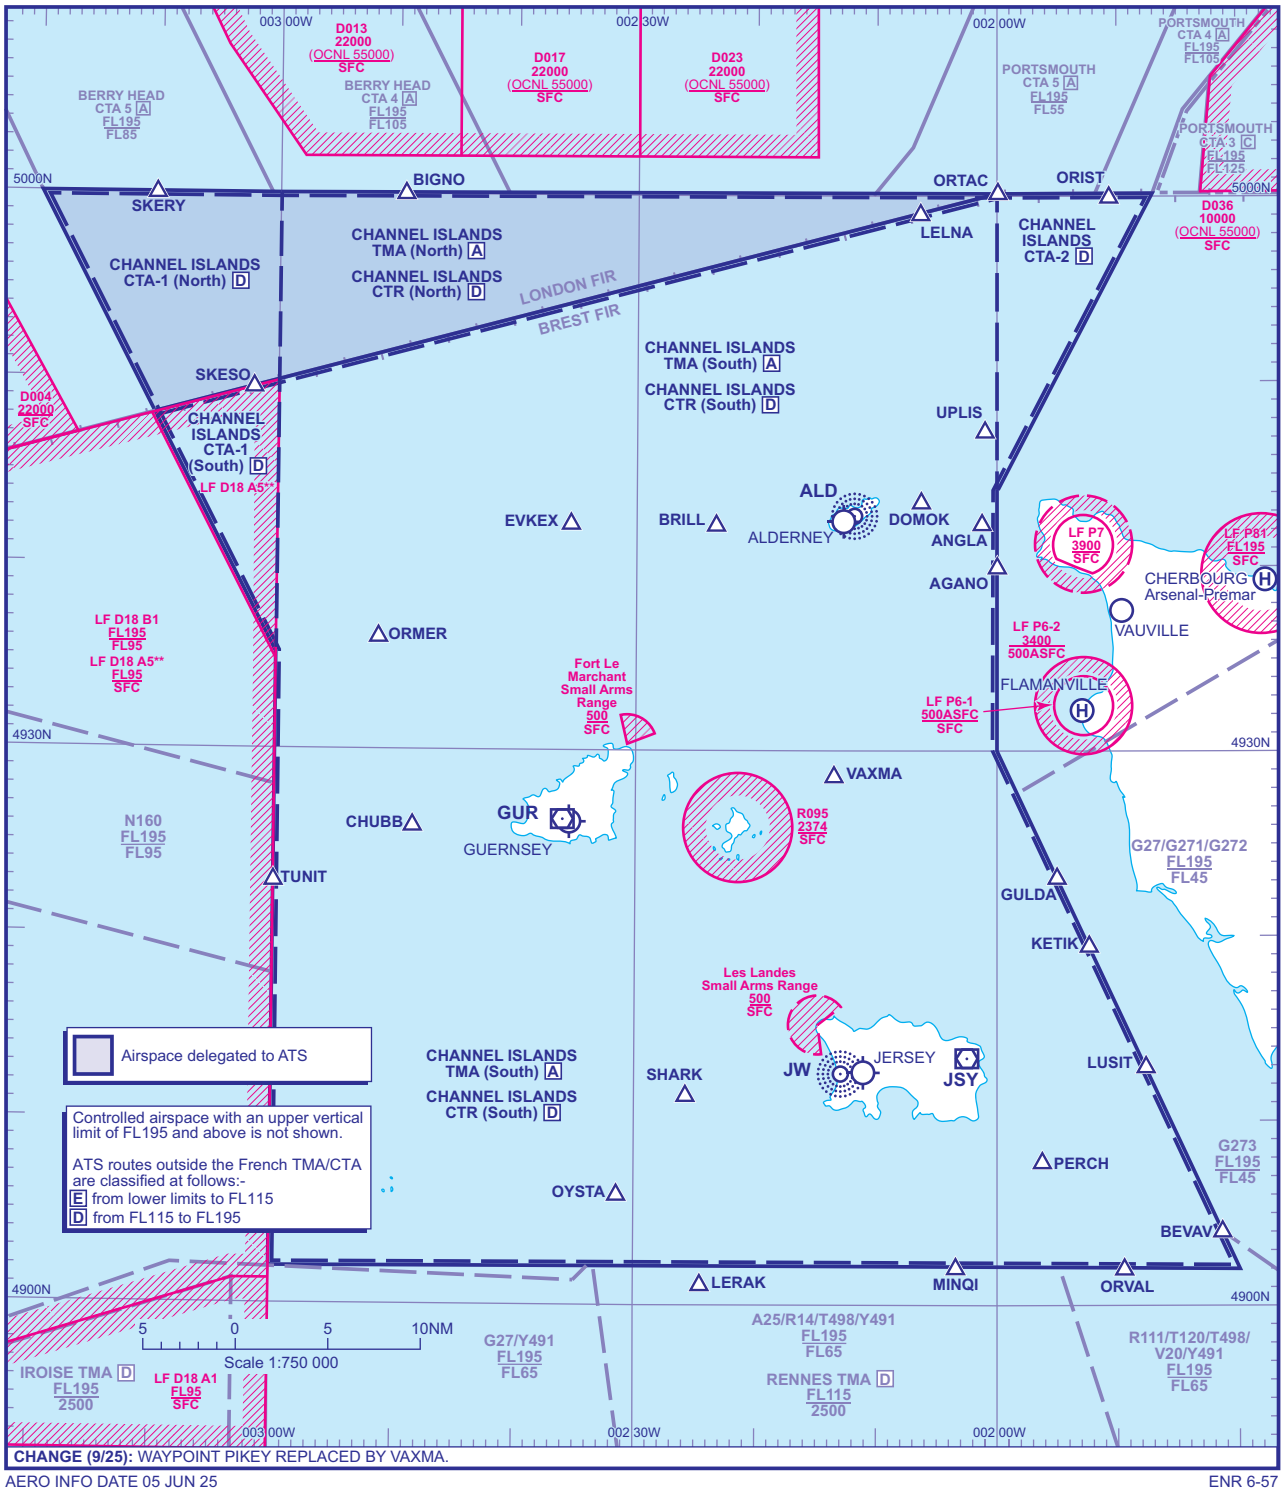


**CHANGE (1/20):** CHART INDEXING.

AERO INFO DATE 25 SEP 19

ENR 6-56

# DELEGATION OF ATS RESPONSIBILITIES - THE CHANNEL ISLANDS



**CHANGE (9/25):** WAYPOINT PIKEY REPLACED BY VAXMA.

AERO INFO DATE 05 JUN 25

ENR 6-57

**AIRSPACE**
Upper/Lower Limits †
Controlled airspace with an upper vertical limit above FL195 is not shown

| CHANNEL ISLANDS* | | |
|---|---|---|
| CTR (North) | D | FL80 / SFC |
| CTR (South) | D | FL80 / SFC |
| CTA-1 (North) | D | FL80 / FL55 |
| CTA-1 (South) | D | FL80 / FL55 |
| CTA-2 | D | FL80 / 3500 |

| CHANNEL ISLANDS* | | |
|---|---|---|
| TMA (North) | A | FL195 / FL80 |
| TMA (South) | A | FL195 / FL80 |

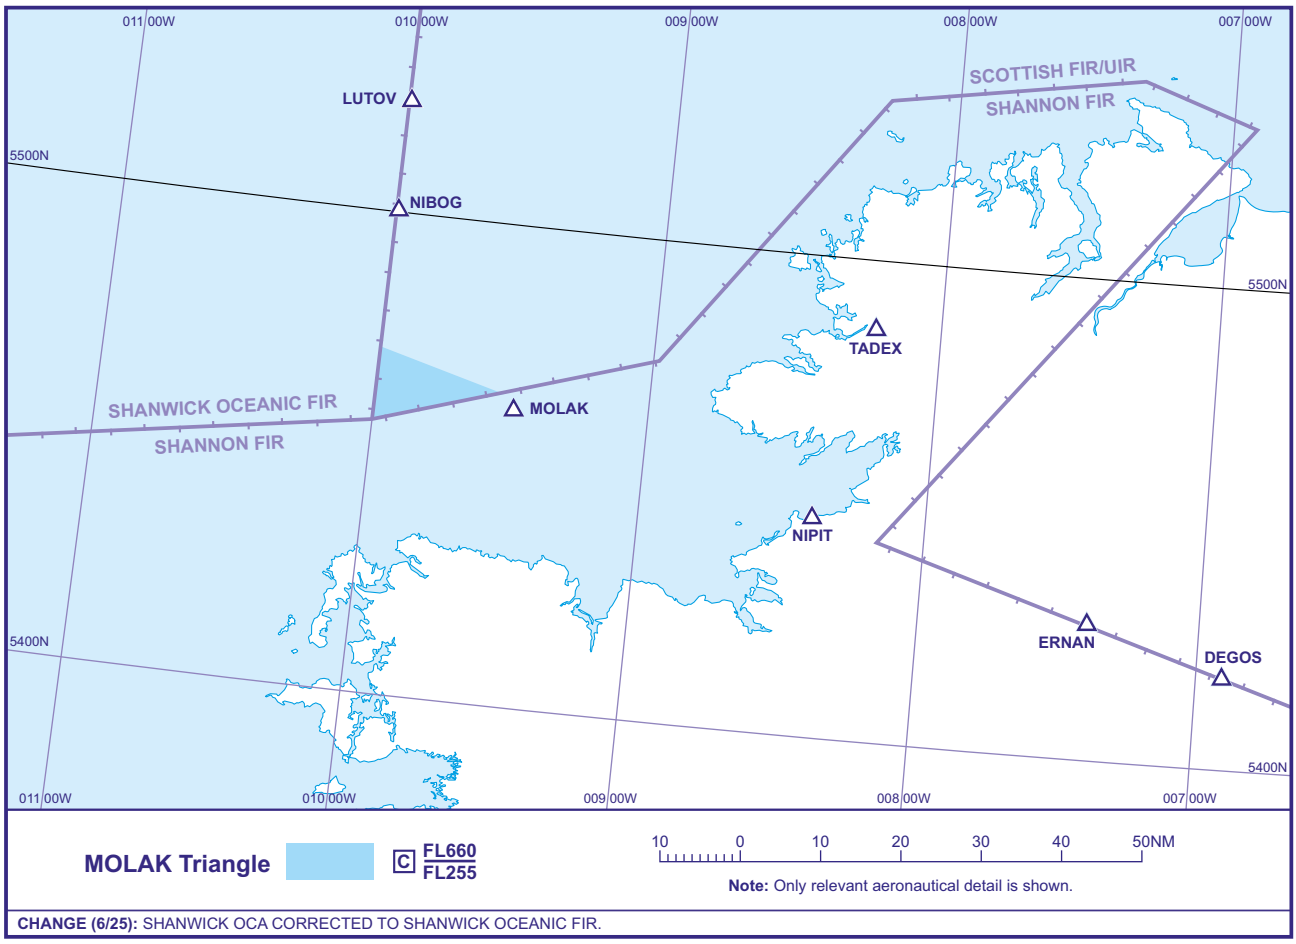
† For lateral limits:
Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
Detailed description of air traffic services airspace organized at an aerodrome see AD 2.17.

* Outside Jersey notified hours and within Brest FIR
The airspace adopts the classification appropriate to Airway or uncontrolled airspace designation, as appropriate, as detailed in the France AIP.

Outside Jersey notified hours and within London FIR
CTR, CTA-1 and TMA revert to Class G.

** **LF D18 A5** SFC-FL95, except for within CHANNEL ISLANDS CTA-1 (South) and TMA (South) when active.

# DELEGATION OF ATS RESPONSIBILITIES - WITHIN THE SOUTH WEST CORNER OF THE SCOTTISH UIR - MOLAK AREA



**CHANGE (6/25):** SHANWICK OCA CORRECTED TO SHANWICK OCEANIC FIR.

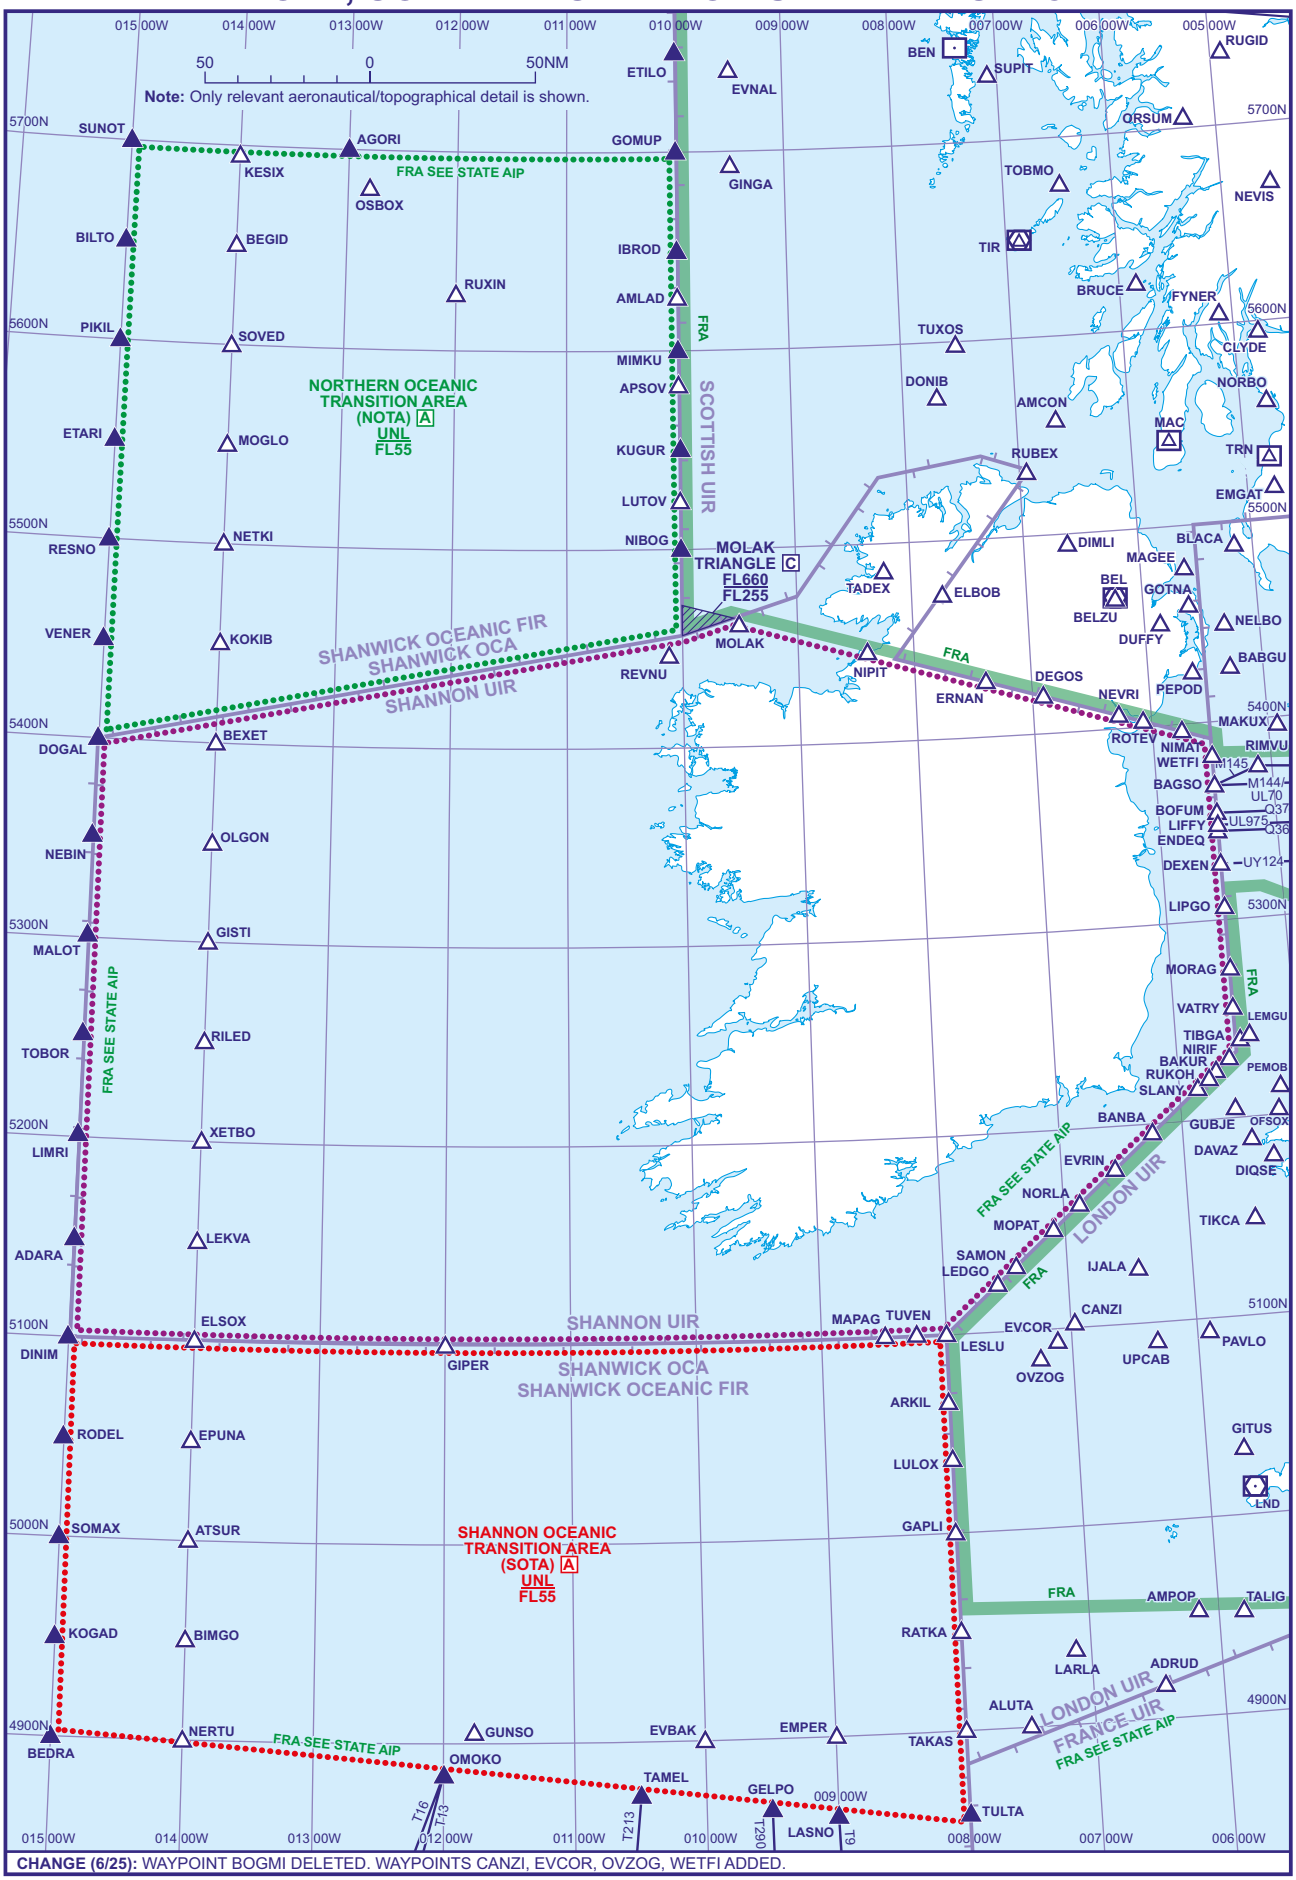
AERO INFO DATE 24 MAR 25

# MILITARY AERODROME TRAFFIC ZONES

**CHANGE (9/25):** DONCASTER SHEFFIELD AIRSPACE REMOVED.

AERO INFO DATE 06 JUN 25

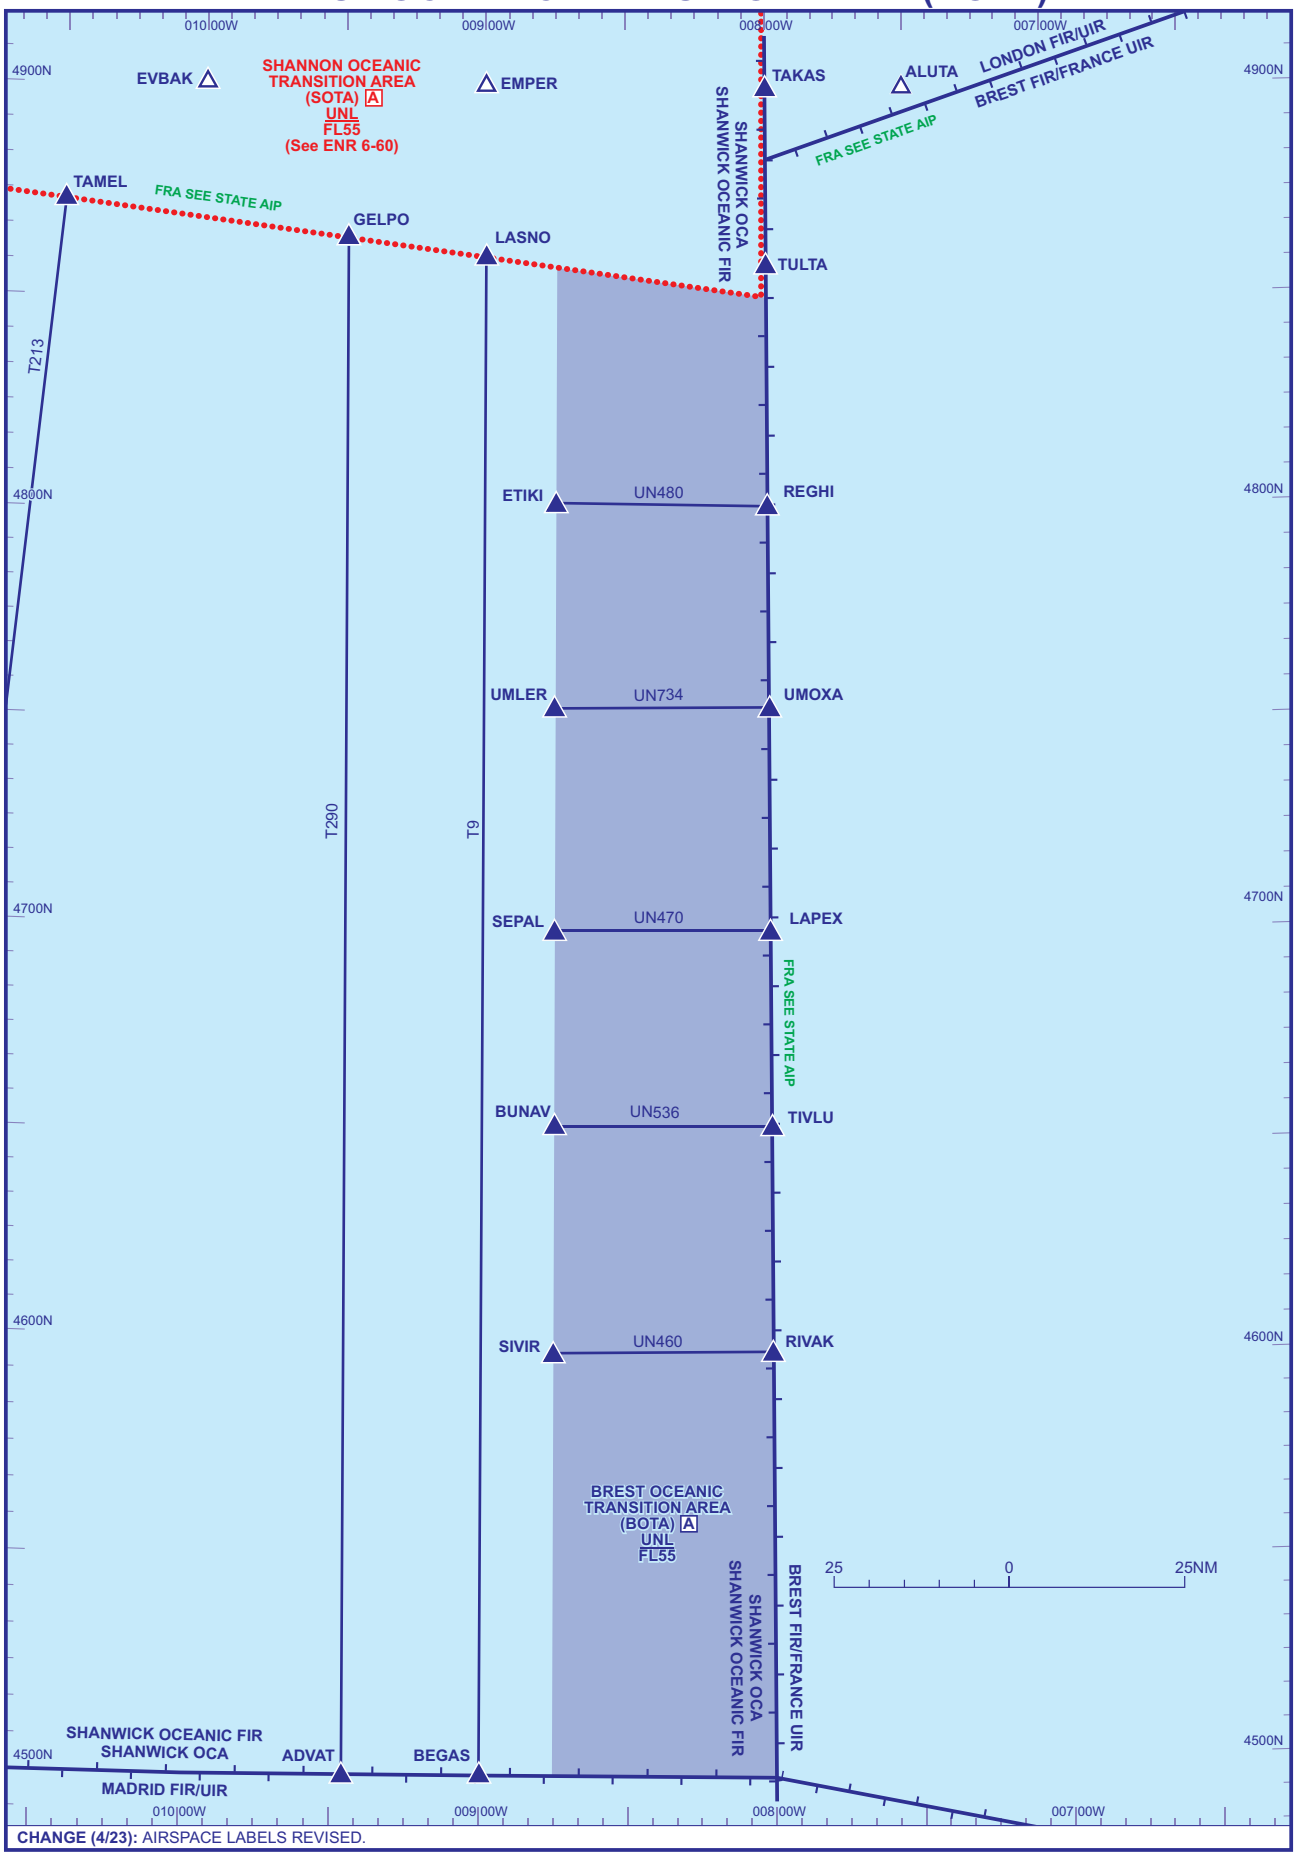
# NOTA, SOTA AND SHANNON UPPER AIRSPACE



**CHANGE (6/25):** WAYPOINT BOGMI DELETED. WAYPOINTS CANZI, EVCOR, OVZOG, WETFI ADDED.

AERO INFO DATE 26 MAR 25

# BREST OCEANIC TRANSITION AREA (BOTA)

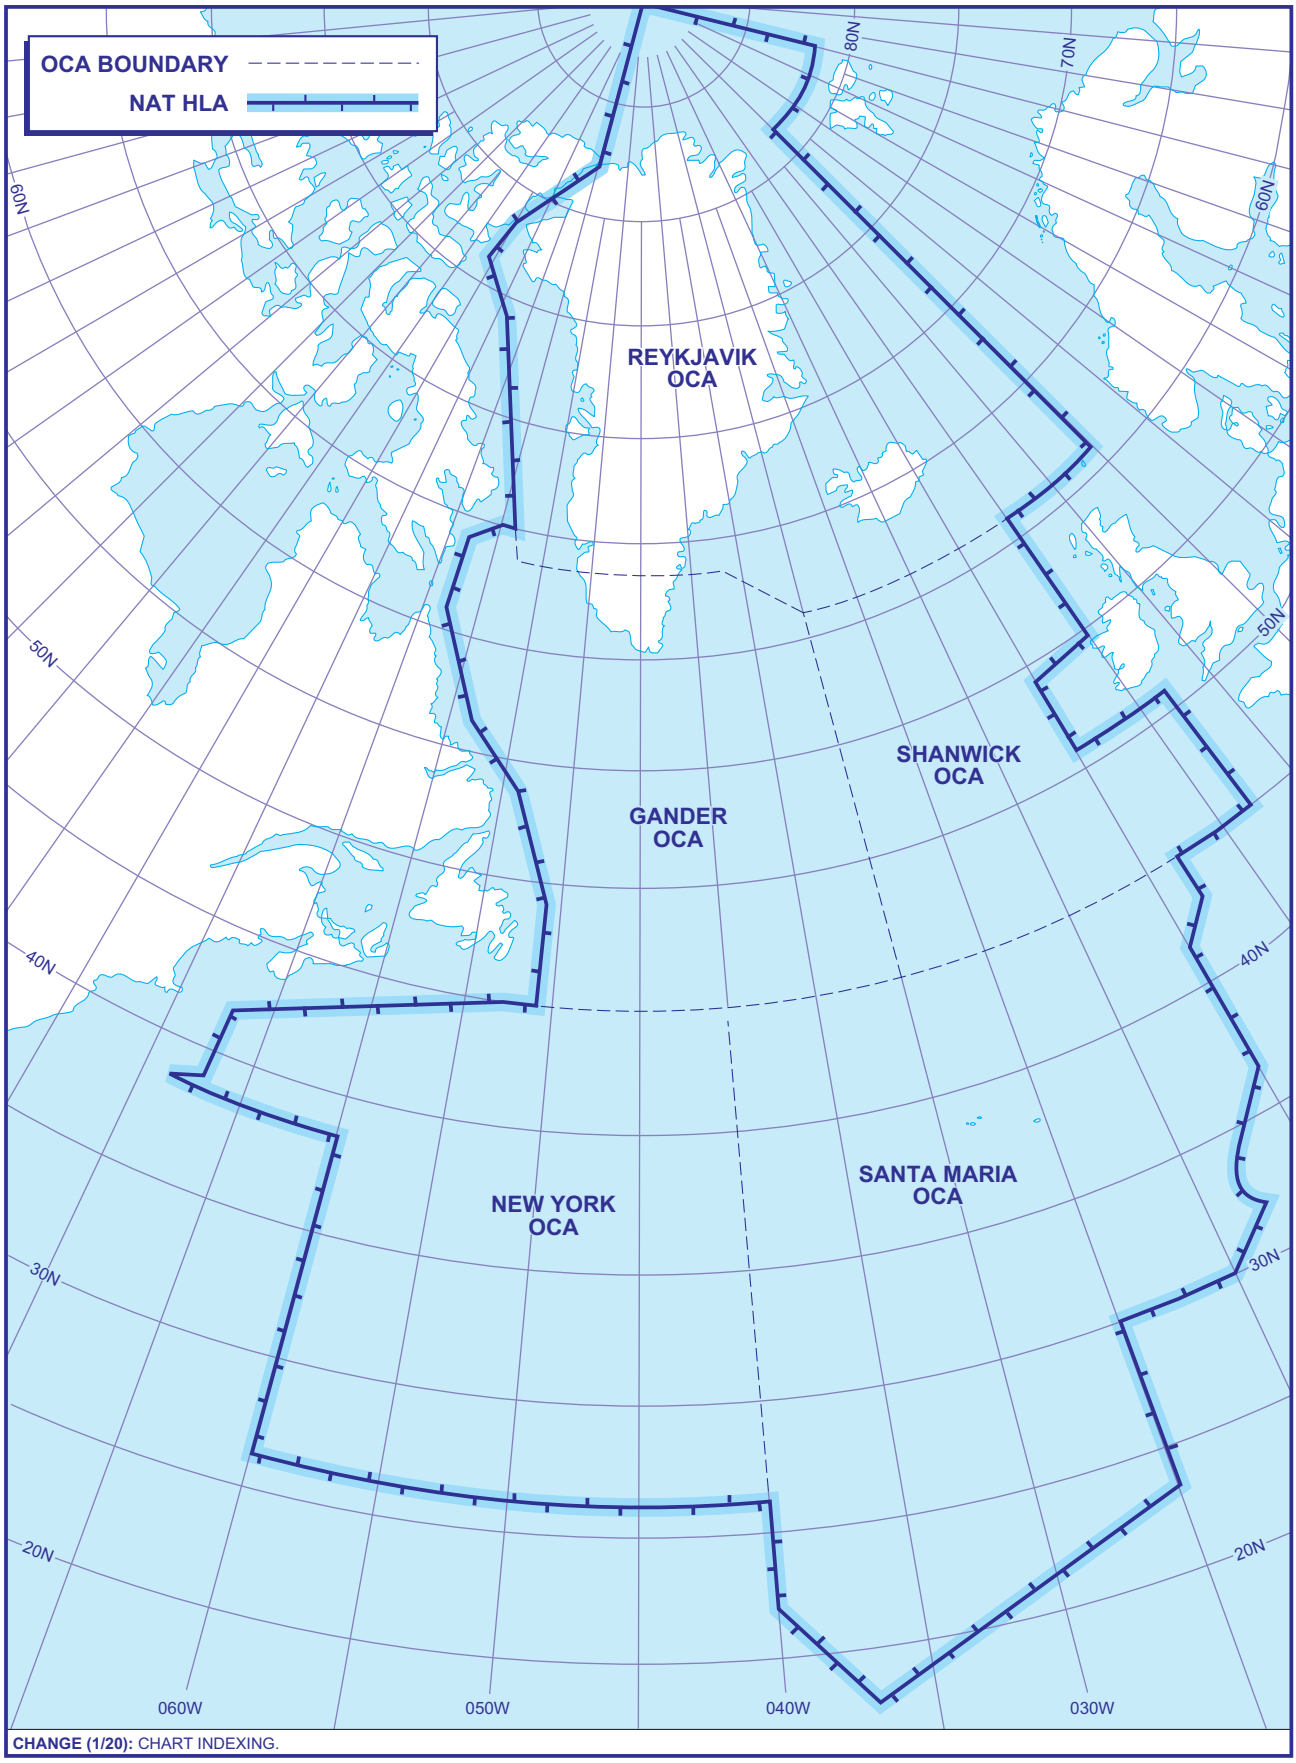


**CHANGE (4/23):** AIRSPACE LABELS REVISED.

AERO INFO DATE 24 JAN 23

ENR 6-61

# NORTH ATLANTIC HIGH LEVEL AIRSPACE (NAT HLA) BETWEEN FL285 AND FL420



**CHANGE (1/20):** CHART INDEXING.

AERO INFO DATE 25 SEP 19

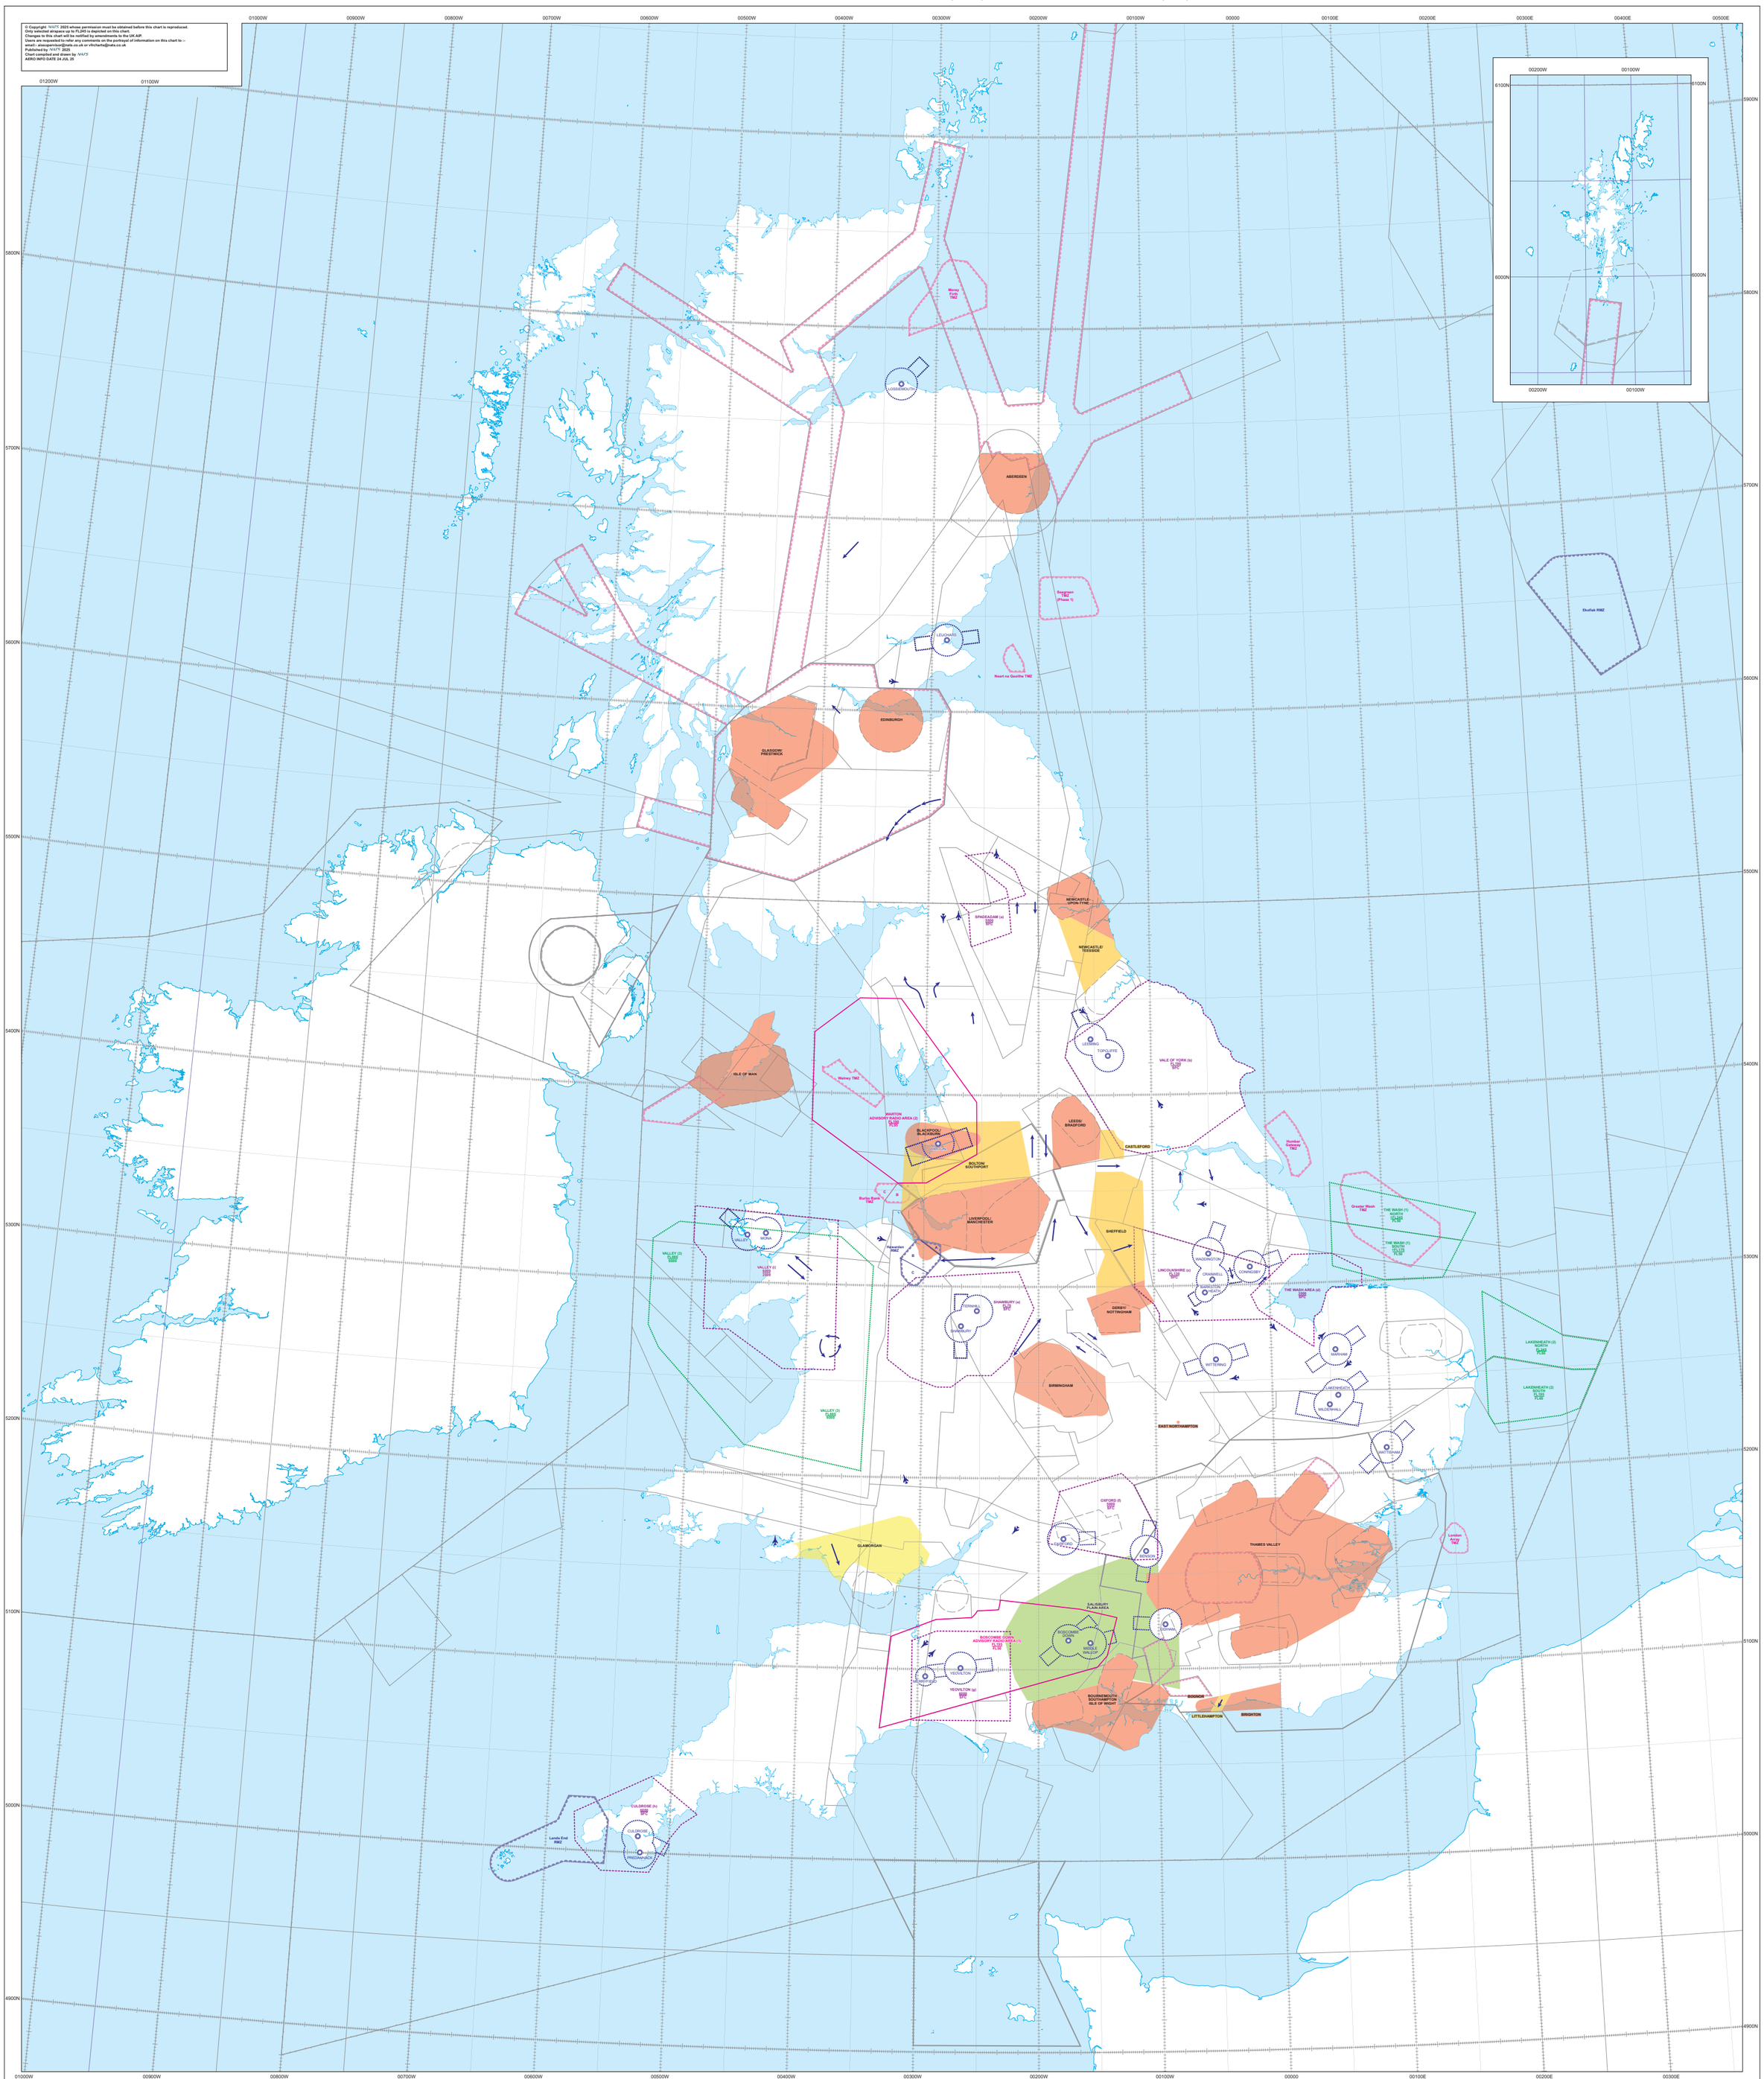
# CHART OF UNITED KINGDOM AREAS OF INTENSE AIR ACTIVITY (AIAA) AND AERIAL TACTICS AREAS (ATA)

© Copyright NATS 2025 whose permission must be obtained before this chart is reproduced.
Only selected airspace up to FL245 is depicted on this chart.
Changes to this chart will be notified by amendments to the UK AIP.
Users are requested to refer any comments on the portrayal of information on this chart to :-
email:- aiasupervisor@nats.co.uk or v9charts@nats.co.uk
Published by NATS 2025
Chart compiled and drawn by NATS
AERO INFO DATE 24 JUL 25



## Areas of Intense Air Activity

**AIAAs are defined as: 'An airspace within which aircraft, singly or in combination with others, regularly participate in unusual manoeuvres'. Pilots of non-participating aircraft who are unable to avoid these areas are strongly advised to make use of a radar service.**

| | | |
|---|---|---|
| **a. SPADEADAM** | × Mon-Thu 0900-1700 (0800-1600) and Fri 0900-1600 (0800-1500). | SUACS from Spadeadam on 128.725 MHz. SUAAIS from Newcastle on 124.380 MHz . |
| **b. VALE OF YORK** | × Mon-Fri 0900-1700 (0800-1600). | LARS from Leeming ATC on 133.380. |
| **c. LINCOLNSHIRE** | × Mon-Fri 0900-1700 (0800-1600). | LARS from Waddington ATC on 119.505 MHz and Coningsby ATC on 119.205 MHz. |
| **d. THE WASH AREA** | × Mon-Thu 0900-1700 (0800-1600) and Fri 0900-1500 (0800-1400). | LARS from Marham ATC on 124.155, Coningsby ATC on 119.205 MHz and Waddington ATC on 119.505 MHz. |
| **e. SHAWBURY*** | × Mon-Thu 0700-0130 (0600-0030) and Fri 0700-1700 (0600-1600). | LARS from Shawbury ATC on 133.155. |
| **f. OXFORD** | Permanently active. | Brize Norton ATC on 124.280. |
| **g. YEOVILTON*** | × Mon-Thu 0830-1700 (0730-1600) and Fri 0830-1600 (0730-1500). | LARS from Yeovilton ATC on 127.355. Note: For aircraft in transit south of a line east to west through Dorchester, a LARS is available from Plymouth Military Radar on 124.150 MHz but to avoid interference pilots should contact Plymouth Military south of 511000N. |
| **h. CULDROSE*** | × Mon-Thu 0830-1700 (0730-1600) and. Fri 0830-1630 (0730-1530). | LARS from Culdrose ATC on 134.055. |
| **i. VALLEY** | × Mon- Thu 0800-1800 (0700-1700) and Fri 0800-1700 (0700-1600). | Contact Valley ATC or London Radar. |

× Peak activity takes place

**See UK AIP ENR 5.2 for details of AIAAs.**

***Within these areas, night operations may be conducted by aircraft using reduced navigation and/or anti-collision lights.**

## Military Low Flying

**Military low flying occurs in most parts of the UK at any height up to 2000 feet above the surface. However, the greatest concentration is between surface and 1000 feet and civil pilots should avoid flying in that height band whenever possible.**

**Military aircraft are considered low flying when:**

**a. Fixed wing aircraft except light propeller-driven aircraft, are flying below 2000 feet above the surface**
**b. Light propeller-driven aircraft and helicopters are flying below 500 feet above the surface. (UK AIP ENR 1.1)**

### Military Aerodrome Traffic Zones (MATZs)

**Have the following vertical limits: SFC to 3000FT AAL within the circle and 1000FT AAL to 3000FT AAL within the stub. Zone configuration may vary, often two or more MATZs are amalgamated to produce a Combined Zone (CMATZ). Controlling aerodromes show the MATZ penetration frequency to be used. See UK AIP ENR 2-2.**

### Directional Flow Over An Area

**These arrows do not indicate a particular route, and are meant to show the general direction of flight in an area.**

### Directional Flow Through Choke Point

**These symbols are aligned to the direction of flight. Where there is bi-directional flow through a choke point, aircraft will route in accordance with the depicted symbols.**

**The Low Flying System of Directional Flow does not apply during weekends, UK Public Holidays and hours of darkness.**

**Warning**
**During military exercises, Directional Flow may be changed for operational reasons during the period of the exercise. Such changes will be notified in the Temporary Navigation Warning giving exercise details. Refer to the AIC for details of the UK Military Low Flying System.**

### Avoidance Areas

**a. In the Avoidance Areas, military low flying does not normally take place unless the flights are in connection with an airfield located within such an area.**

**b. Military low flying does not normally take place within Class A and Class C airspace.**

**Where AIAAs and the Avoidance Areas overlap, military aircraft will not normally operate below 2000 feet except in connection with an airfield situated in the area.**

### Transit Areas

**Military aircraft are not permitted to fly in Transit Areas below 1000 feet above the surface except helicopters and light propeller driven aircraft. These areas are designed to permit the easy transit of military aircraft between one low flying area and another.**

## Aerial Tactics Areas

**ATAs are defined as: 'An airspace of defined dimensions designated for air combat training, within which high energy manoeuvres are regularly practised by aircraft formations'. Pilots of non-participating aircraft who are unable to avoid these areas are strongly advised to make use of a radar service.**

**Autonomous operations are only permitted within ATAs above FL195 when the overlying TRA is active.**

| | | |
|---|---|---|
| **1. WASH** | × Mon-Thu 0700-2300 (0600-2200) and Fri 0700-1700 (0600-1600). | Swanwick Mil. |
| **2. LAKENHEATH** | × Mon-Thu 0700-2300 (0600-2200) and Fri 0700-1700 (0600-1600). | Swanwick Mil. |
| **3. VALLEY** | × Mon-Thu 0800-1800 (0700-1700); Fri 0800-1700 (0700-1600). | RAF Valley ATC or Swanwick Mil. |

× Peak activity takes place

**See UK AIP ENR 5.2 for details of ATAs.**

### The Salisbury Plain Area

**The Salisbury Plain Area is an area of high activity used primarily by helicopters, although low flying civil and military fixed-wing aircraft operate from time to time in this airspace.**

### Advisory Radio Area

| | | |
|---|---|---|
| **1. BOSCOMBE DOWN** | Mon-Fri 0930-1730 (0830-1630). | Boscombe Down on 126.705 |

**Test flight activity within this area often requires pilots to fly profiles which limit their ability to manoeuvre their aircraft in compliance with the Rules of The Air. Such flights will receive a radar service from Boscombe Down or the Swanwick Military Special Tasks Cell.**

**Pilots of other aircraft flying in the area are strongly advised to call Boscombe on 126.705 who provide pilots with information on any relevant test flight activity and, if requested, advice on arranging a detour area, or provision of an Air Traffic Service subject to controller workload.**

| | | |
|---|---|---|
| **2. WARTON** | Mon-Thu 0730-1900 (0630-1800) and Fri 0730-1700 (0630-1600). | Warton on 129.530 MHz. |

**Test flight activity within this area often requires pilots to fly profiles which limit their ability to manoeuvre their aircraft in compliance with the Rules of The Air. Such flights will receive a radar service from Warton.**

**Pilots of other aircraft flying in the area are strongly advised to call Warton on 129.530 MHz who provide pilots with information on any relevant test flight activity and, if requested, advice on arranging a detour area, or provision of an Air Traffic Service subject to controller workload.**

**See UK AIP ENR 5.2 for details of ARA.**

## Low Level Civil Aircraft Notification Procedure (CANP)

**Some civil aircraft operators have a requirement to fly at very low heights when carrying out authorised aerial work; the majority of these flights take place at or below 1000 feet above the surface. These operators are reminded that the CANP is designed to enhance flight safety in the lower airspace and they are strongly recommended to notify details of their operations in accordance with the UK AIP ENR 1.10. E-mail notification is preferred for CANP requests as this allows the LFC to E-mail or telephone confirmation of E-mail and issue a reference number to the aircraft operating authority. Contact details are as follows:**

**Low Flying Co-ord (LFC) at RAF (U) Swanwick.**

**Phone: 0800-515544 or 01489-443100.**
**Email: swk-lfofflfbc@mod.gov.uk**

**The types of air activity that should be notified include:**

**a. COMMERCIAL AIR ACTIVITIES**
Aerial crop spraying (all agricultural work carried out by aircraft), underslung aerial load lifting, aerial photography/filming, aerial surveys/air surveillance.

**b. RECREATIONAL AERIAL ACTIVITIES**
Gliders, hang gliders, para gliders, free-flight balloons, microlight aircraft of model aircraft - where 5 or more are operating from a site not listed in the UK AIP for such activity, or are operating outside the hours published in the UK AIP.

**c. OTHER AERIAL ACTIVITIES**
Tethered/captive balloons to a height greater than 200 feet (60 metres) AGL, kite flying - 5 or more kites from a specified site to a height greater than 200 feet (60 metres) AGL, aircraft operations from water, any other aerial activity likely to create an exceptional concentration of aircraft at a site not listed in the UK AIP.

**Transponder Mandatory Zones (TMZ)**

1. Pilots operating in the vicinity of, but intending to remain outside controlled airspace within the areas defined above and maintaining a listening watch only on appropriate monitoring frequency are encouraged to select the appropriate SSR code.
2. Selection of SSR code does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances. Pilots remain responsible for their own navigation, separation and terrain clearance and are expected to remain clear of the controlled airspace at all times.
3. Whilst squawking the code pilots should be aware that ATC may make blind transmissions in order to ascertain a particular aircrafts intentions/route.
4. When a pilot ceases to maintain a listening watch, the code shall be deselected.

**AD 3.23 Charts related to a heliport**

# AD 1 AERODROMES/HELIPORTS - INTRODUCTION

## AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

## 1 GENERAL CONDITIONS

### 1.1 General Conditions under which Aerodromes/Heliports and Associated Facilities are Available for Use

1.1.1 Civil aircraft are not permitted to land at aerodromes in the United Kingdom other than those mentioned in this publication, except in cases of genuine emergency in flight or where special permission has been obtained from the aerodrome operator.

1.1.2 All values described in AD 2.2 section 5 (Magnetic Variation/Annual change) are decreasing.

### 1.2 Applicable ICAO Documents

1.2.1 The Standard Recommended Practices and Procedures contained in the following ICAO documents are applied with the Differences noted hereunder:

| | |
|---|---|
| Annex 14 Volume 1 | Aerodromes |
| Annex 14 Volume 2 | Heliports |
| DOC 7030 | Regional Supplementary Procedures |
| DOC 7754 | ANP - EUMED Region |

### 1.3 Prior Permission Requirements

1.3.1 There are two classes of civil aerodromes at which landings require the prior permission of the owner or the authority concerned. The persons in charge of most of these aerodromes require application for permission to land to be made by telephone prior to take-off; in cases where permission by RTF is acceptable or where application in writing is required this is indicated in AD 2 or AD 3 as appropriate.
The two classes of aerodrome are as follows:

a) Licensed Aerodrome (Ordinary Licence)

i. Prior arrangements with the person in charge are necessary as these aerodromes are licensed only for the use of the licensee or by persons specifically authorised by him.

b) Unlicensed Aerodromes

i. Prior arrangements with the owner or person in charge are necessary.
ii. Unlicensed aerodromes are not inspected by the Civil Aviation Authority.

1.3.2 Use of Government aerodromes is also subject to prior permission. (See section 2).

### 1.4 Availability of Ground Services

1.4.1 Details of the various ground services available at an aerodrome (ie fuel, hangarage, repair facilities, etc) may be found at AD 2 and AD 3.

1.4.2 It should be noted, however, that as some of the services are not the direct responsibility of the aerodrome management, the hours during which such services are available do not necessarily coincide with the hours during which the aerodrome is open to visiting aircraft.

1.4.3 It is the responsibility of the aircraft operator to ensure, before departure for an aerodrome, that such services are available.

### 1.5 Noise Abatement Requirements

1.5.1 Section 78(1) of the Civil Aviation Act 1982 enables the Secretary of State for Transport to publish a notice imposing a duty on operators of aircraft at designated aerodromes to comply, after take-off or before landing, with specified requirements for the purpose of limiting or mitigating the effect of noise and vibration connected with the taking-off or landing of aircraft. Notices under Section 78 are set out in AD 2.21 for London Gatwick, London Heathrow and London Stansted.

1.5.2 In order to ensure that NPRs continue to reflect the intended track over the ground, it is sometimes necessary to adjust the published bearings. This may be due to changes in magnetic variation or may be the result of a recalibration of a radio navigation aid.

### 1.6 Operational Hours

1.6.1 The hours indicated against AD 2.3/3.3 item 1 (AD/Heliport) are to be considered as the aerodrome/heliport operating hours or hours of availability unless otherwise stated. Note that revised operating hours may be notified by NOTAM.

1.6.2 All times are in UTC unless otherwise stated. Where 'SS' or 'SS+..' is shown as an alternative closing time, the aerodrome service

closes at whichever time is earlier, unless otherwise stated.

1.6.3 The commencement and cessation of the Summer Period (UTC + 1 hour) and the Winter Period (UTC) is shown at GEN 2.1.

## 1.7 Closure of Aerodromes

1.7.1 Pilots will not be refused permission to land or take-off at public-licensed aerodromes (AD 1.4 refers) solely because of bad weather conditions. Pilots of public and non-public transport aircraft should bear in mind, however, that the UK Air Navigation Order, requires that they do not infringe the applicable aerodrome operating minima.

1.7.2 The only circumstances in which a public-licensed aerodrome will be closed to normal air traffic during its published hours of availability are:

a) When the surface of the landing area is unfit;
b) at times and in conditions specified in NOTAM or AIP Supplements;
c) if essential aerodrome facilities are unserviceable.

1.7.3 In an emergency, pilots will be allowed to land regardless of the conditions of the aerodrome and aerodrome facilities.

## 1.8 Operations Outside Published Operating Hours

1.8.1 Aerodromes/Heliports may not be used outside the published hours of availability (see AD 2.3/3.3) without the prior permission of the appropriate authority. This applies not only to aerodromes of origin and destination but also to alternates.

1.8.2 Any application for operations outside published operating hours should be made to the authority controlling the aerodrome/ heliport.

## 1.9 Declared Distances

1.9.1 The distance shown for Take-off Run Available, Accelerate Stop Distance Available, Take-off Distance Available and Landing Distance Available in Items AD 2.13 and AD 3.13, are notified for the purposes of the Air Navigation (General) Regulations 2006 Part 3.

1.9.2 ‘Take-off Run Available' (TORA) is defined as the length of runway which is available and suitable for the ground run of an aeroplane taking-off.

1.9.3 'Accelerate-Stop Distance Available' ( ASDA) is defined as the length of the declared take-off run plus the length of stopway available.

1.9.4 ‘Take-off Distance Available’ (TODA) is defined as the length of the declared take-off run plus the length of clearway available.

1.9.5 'Landing Distance Available' (LDA) is defined as the length of runway (or surface, when this is unpaved) which is available and suitable for the ground landing run of the aeroplane commencing at the landing threshold or displaced landing threshold.

## 1.10 Obstacles

1.10.1 For the purposes of ICAO Type C Charts, operators should assume that, in addition to the obstacles listed in the AD Section of the UK AIP and those which are shown on any ICAO Type A Charts, obstacles of up to 300 FT above ground level may exist:

a) outside the coverage of any ICAO Type A Chart; and
b) beyond 4 NM from the Aerodrome Reference Point.

1.10.2 Information for licensed aerodromes is limited to significant obstacles and the lists are not comprehensive, they do not necessarily include all shadowed obstacles.

1.10.3 To determine the existence of obstacles 400 FT or more above aerodrome level, operators should thus combine the above advice on the possible existence of obstacles with the detailed contour information which is given on the Ordnance Survey 1:50 000 Maps; relating the outcome to the published aerodrome elevation.

## 1.11 Visual Ground Aids

1.11.1 Details of visual ground aids, lighting, runway markings and self manoeuvring stand markings are given in Civil Aviation Publication CAP 637.

## 1.12 Runway Utilisation

1.12.1 Irrespective of the runway direction selected by ATC, or notified by FIS Operators, A/G communication service radio station operators or the Aerodrome Operator, it remains the pilot’s responsibility to obtain the latest weather and aerodrome information and to decide whether or not their skill, overall experience, and recent flying experience on the particular type of aircraft will enable

a safe take-off or landing to be accomplished in the prevailing wind and runway surface conditions.

1.12.2 Those responsible for selecting the runway in use normally chose a runway that is most closely aligned to the surface wind direction but this may vary because of local operational restrictions or procedures. A pilot who is unable to accept the runway in use should advise ATC, the FISO or A/G communication service radio station operator that the crosswind, or tailwind on that runway is outside of their limits and request the use of a more suitable runway. ATC staff at aerodromes can assist pilots of aircraft, particularly light aeroplanes and gliders, by offering, whenever possible, the runway most into wind for take-off and landing if this is not the runway in use.

1.12.3 Use of an alternative runway may entail some delay while aircraft movements for the runway in use are reorganised by the ATC unit, or a suitable break in other traffic occurs at aerodromes at which an AFIS (Callsign suffixed by 'Information') or A/G communication service (Callsign suffixed by 'Radio') is provided. Pilots should recognise that, in some circumstances, the only suitable alternative runway may be at another aerodrome.

1.12.4 ATC procedures are detailed in GEN 3.3.

### 1.13 Runway Surface Condition Reporting

1.13.1 Information relating to runways affected by water, frost, snow, slush and ice can be found at AD 1.2.2 SNOW PLAN; and guidance on the risks and factors associated with aircraft operations on runways contaminated with frost, snow, slush and water is published in an Aeronautical Information Circular.

1.13.2 The presence or otherwise of surface contaminants on a runway will be reported by the aerodrome operator using the Global Reporting Format (GRF). Further information relating to GRF is detailed in AD 1.2, paragraph 2.5, System and Means of Reporting.

1.13.3 At Government aerodromes, runway surface conditions will be reported using GRF. Further information relating to GRF is detailed in AD 1.2, paragraph 2.5, System and Means of Reporting.

### 1.14 Runway Friction Assessment

1.14.1 Full details of this procedure can be found in CAP 683, The Assessment of Runway Surface Friction Characteristics.

1.14.2 Aerodrome authorities are required to conduct periodic surveys of the friction characteristics of their runway surfaces. The purpose of these surveys is to predict the need for maintenance of the runway surface to prevent an unacceptable deterioration of grip as detailed in Table 1. The recognised Continuous Friction Measuring Equipment (CFME) devices in the UK are the Mu Meter, GripTester and ASFT.

**Table 1: Mu-Meter and Grip Tester and ASFT Friction Levels**

| Continuous Friction Measuring Equipment (CFME) | Design Objective Level (DOL) | Maintenance Planning Level (MPL) | Minimum Friction Level (MFL) |
|---|---|---|---|
| Mu-Meter | 0.72 or above | 0.57 | 0.50 |
| Grip Tester | 0.80 or above | 0.63 | 0.55 |
| ASFT | 0.82 or above | 0.60 | 0.50 |
| ***Note:*** *Friction Levels correspond to the CAP 683 procedure.* | | | |

1.14.3 If a survey indicates that the runway surface friction characteristics have deteriorated below the specified Minimum Friction Level (MFL), then that runway will be notified by NOTAM as a runway that 'may be slippery when wet'.

1.14.4 When a runway is notified as 'may be slippery when wet', aircraft operators may request additional information relating to that notification from the aerodrome operator. However, any performance calculations or adjustment made as a result of this information is the responsibility of the aircraft operator.

## 2 USE OF MILITARY AIR BASES

2.1 The term Government Aerodrome is applied to those aerodromes in the United Kingdom which are in the occupation of any government department or visiting force. Therefore all UK military aerodromes are so designated.

2.2 It is the Ministry of Defence policy to encourage the use of active Government aerodromes by United Kingdom civil aircraft on inland flights, provided this is consistent with defence requirements and local interests. Those aerodromes notified as available to civil aircraft are listed in AD 1.1 Paragraph 2.12, but permission to use any government aerodrome must be obtained from the operating authority at the aerodrome concerned before landing (in this connection filing of a flight plan does not constitute prior permission). Unless there are special circumstances, permission will not normally be given for flights outside normal working hours of the aerodrome concerned.

2.3 Where permission is sought to use an inactive Government aerodrome, or for overseas flights, at least three weeks notice should

be given, except where the flight is of a humanitarian nature or is for agricultural aviation.

2.4 Foreign aircraft are not normally permitted to use UK Government aerodromes. However, those aerodromes identified as Military Emergency Diversion Aerodromes in GEN 3.6 may be used by foreign aircraft when the destination aerodrome, as indicated in the flight plan, is unusable because of adverse conditions.

2.5 The pilot of a civil aircraft wishing to use a military aerodrome will be required to comply with the following instructions:

a) Prior to flight departure, to obtain permission to land there from the authority at the aerodrome concerned; in this connection the filing of a flight plan does not constitute obtaining prior permission; also to provide details of the aircraft, crew and passengers. Permission to use an aerodrome may be withheld for operational or administrative reasons; rejection of a request for such reasons must be accepted as final;
b) all aircraft must comply with the ATC procedures in force at the aerodrome. Aeronautical information which is not published in the UK AIP may be obtained from the MIL AIP;
c) if making an instrument approach, pilots of civil aircraft should calculate their Aerodrome Operating Minima in accordance with AD 1.1 Paragraph 4;
d) after landing, to report personally to Air Traffic Control and give details of the aircraft, crew and passengers. Note that control of entry precautions normal to a particular military aerodrome will, in the interests of security, be applied to all persons arriving or departing by civil aircraft;
e) before taking-off, to report personally to Air Traffic Control and give particulars of flight crew and passengers, and obtain taxiing instructions. The pilot is responsible for deciding whether or not to proceed after receipt of clearance to taxi and take-off.

2.6 Hangarage for civil aircraft may be provided subject to agreement and, if provided, will be entirely at the owners risk.

2.7 Fuel, oil, or similar products, may be provided at the Commanding Officer's discretion but servicing or loading of civil aircraft cannot be undertaken except in cases of distress or exceptional circumstances. Pilots may make their own arrangements with civil petrol agents to refuel their civil aircraft on the aerodrome, provided that they furnish adequate cover against damage or loss arising from the presence of the agent's equipment and that prior permission for such arrangements is obtained from the Commanding Officer of the station. No permanent positioning of civil refuelling equipment or parties will be permitted, unless the approval of the Ministry of Defence has been obtained.

2.8 Liability will not be accepted by the controlling Department, its servants or agents, or by any servant or agent of the Crown for the loss or damage, by accident, fire, flood, tempest, explosion or any other cause to aircraft, or for loss or damage, from whatever cause, arising to goods, mail or other articles belonging to any person, even if such loss or damage is caused by or arises from negligence on the part of the Department's servants or agents or any servant or agent of the Crown. The use of military aerodromes will be permitted only upon the understanding that the controlling Department and the Crown will be held indemnified against all claims whatsoever made by third parties in respect of personal injuries (whether fatal or otherwise), damage to or loss of property howsoever caused, which may arise as a result of the facilities granted.

2.9 The use of any apparatus such as tractors, cranes, chocks, starter trolleys, etc, belonging to or under the charge of the controlling Department, by the personnel of aircraft or other persons making use of the aerodrome, will be entirely at the risk of the person using such apparatus, and no liability will be accepted for any loss, damage or injury caused by or arising from the use of any such apparatus (whether under the control or management of any servant or agent of the controlling Department or of the Crown or otherwise) other than liability for personal injuries or death caused by or arising from negligence on the part of any servant or agent of the controlling Department or the Crown. The use of such apparatus will be permitted only upon the understanding that the controlling Department and the Crown will be held indemnified against all claims whatsoever which may result from such use. It must, further, be clearly understood that the controlling Department does not in any way guarantee the safety or fitness of any such apparatus or of any equipment, petrol or oil, or similar products, supplied.

2.10 The civil use of Government aerodromes is, in addition to the limitations referred to above, subject to the appropriate charges being paid at the time. Use is also subject to the availability of appropriate Air Traffic Control and crash/rescue services as laid down by Ministry of Defence regulations.

2.11 The Government aerodromes listed in paragraph 2.12 are hereby notified for the purposes of the UK Air Navigation Order, subject to the conditions so specified as available for the take-off and landing of aircraft engaged on flights for the purpose of the public transport of passengers or for the purpose of instruction in flying.

2.12 These aerodromes do not necessarily comply with the specifications of ICAO Annex 14 because of their military use. However, the safety of civil registered aircraft operations is regulated by the UK CAA, while the UK Ministry of Defence (MoD) retains responsibility for all aspects of military registered aircraft operations and for the physical and military operational conditions at these aerodromes. The MoD is also responsible for publishing the necessary and appropriate flight and aerodrome safety information. Civil registered aircraft operators are reminded of their obligations under the UK Air Navigation Order.

| | |
|---|---|
| Boscombe Down (MoD) | Mildenhall (RAF) |
| Brize Norton (RAF) | Northolt (RAF) - Refer to AD 1.3 |
| Leuchars (RAF) | Waddington (RAF) |
| Yeovilton (RNAS) | |

Aeronautical information in respect of these aerodromes may be obtained from the MIL AIP.

2.13 UK Military Aerodromes are not subject to the requirements in EU Regulation 216/2008 as amended by EU Regulation 1108/2009, EU Regulation 1035/2011 (relating to ANS) and EU Regulation 139/2014 (relating to aerodromes) and may not comply with the

# AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

Annex 14 Volumes 1 and 2 of the ICAO Convention. Civil Operators requiring further information should contact the particular aerodrome in question; that unit will provide the requisite information and support.

## 3 LOW VISIBILITY PROCEDURES

### 3.1 CAT II/III Operations at Aerodromes

3.1.1 Promulgation of an aerodrome/runway as available for Category II or Category III operations means that it is suitably equipped and that procedures appropriate to such operations have been determined and are applied when relevant.

3.1.2 Promulgation implies that at least the following facilities are available:

- ILS - certificated to relevant performance category.
- Lighting - suitable for Category promulgated.
- RVR System - will be an automatic system for Category II and III.

3.1.3 Special procedures and safeguards will be applied during Category II and III operations. In general, these are intended to provide protection for aircraft operating in low visibilities and to avoid disturbance to the ILS signals. The details of any special taxi routes, runway turn-off points and runway holding points are shown in AD 2.

3.1.4 Protection of ILS signals during Category II or III operations may dictate that runway holding positions are more distant from the runway than the runway holding positions used in good weather. Taxiways lying within the ILS Sensitive Area are marked by colour coded taxiway centre-line (alternate yellow/green lights). Pilots should avoid stopping their aircraft within the ILS Sensitive Area and should make their 'Runway Vacated' call only after the aircraft is clear of the Sensitive Area.

3.1.5 In actual Category II or III weather conditions pilots will be informed by ATC of any unserviceabilities in the promulgated facilities so that they can amend their minima, if necessary, according to their operations manual. Pilots who wish to carry out a practice Category II or Category III approach are to request Practice Category II (or Category III) Approach on initial contact with Approach Control. For practice approaches there is no guarantee that the full safeguarding procedures will be applied and pilots should anticipate the possibility of resultant ILS signal disturbance.

3.1.6 Details of aircraft operator requirements for low minima operations, Category ll and lll, are contained within the Air Operations Regulation UK (EU) Regulation 965/2012 which can be obtained from the CAA website.

## 4 AERODROME OPERATING MINIMA

### 4.1 Introduction

4.1.1 This section of the AIP specifies the notified method of calculating Aerodrome Operating Minima (AOM).

### 4.2 General Requirements

4.2.1 Under the provisions of the UK Air Navigation Order, public transport aircraft shall observe AOM and aerial work and private aircraft shall observe AOM when conducting an approach to a runway with a notified Instrument Approach Procedure (IAP).

4.2.2 On 1 January 2021 UK AMC, GM and CS was adopted by CAA as Regulation (EU) No. 965/2012 as retained (and amended in UK domestic law) under the European Union (Withdrawal) Act 2018 replacing Commission Regulation No. 965/2012.

The UK Air Operations Regulation and Acceptable Means of Compliance and Guidance Material are available at:

Air Operations | Civil Aviation Authority (caa.co.uk).

4.2.3 All flight operations by aircraft within the UK Flight Information Region (FIR) are to operate with AOM no lower than calculated using the UK Air Operations Regulation. This is the same method as used to calculate minima published on commercially available flight guides.

4.2.4 For operations to AOM lower than Category 1 and the use of Enhanced Visual Systems to use reduced AOM values, advice should be obtained from Shared Services Centre, Civil Aviation Authority, Gatwick Airport South, West Sussex RH6 0YR.

4.2.5 It should be noted that the privileges of pilot licenses, Rules of the Air and limitations in the aircraft Flight Manual can be more restrictive than the AOM contained in this section. In establishing the AOM that will apply, full account must be taken of:

a) the type and handling characteristics of the aircraft;
b) the composition of the flight crew and their competence and experience;
c) the dimensions and characteristics of the runway which may be selected for use;
d) the adequacy and performance of the available visual and non-visual ground aids;
e) the equipment available on the aircraft for the purpose of navigation and/or control of the flight path, as appropriate, during the take-off, the approach, the flare, the landing, roll-out and missed approach;

f) the obstacles in the approach, and missed approach and climb-out areas required for the execution of contingency procedures and necessary clearance;
g) the obstacle clearance altitude/height for the instrument approach procedures; and
h) the means to determine and report meteorological conditions.

### 4.3 Commercial Air Transport (CAT) Operations

4.3.1 For CAT operators, the method of calculating AOM should be in accordance with the most restrictive of their company operations manual or the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

### 4.4 Public Transport Operations

4.4.1 For Public Transport aircraft registered in the UK the methods of calculating AOM in relation to 'specified' AOM in Article 107 shall be those in the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

4.4.2 For Public Transport aircraft not registered in the UK the AOM in relation to Article 108(3) shall be the most restrictive of their company operations manual or the UK Air Operations Regulation, unless more restrictive minima are notified in respect of a particular aerodrome.

### 4.5 Aerial Work and Private Aircraft

4.5.1 For Aerial Work and private aircraft operations the AOM in relation to Article 109 shall be no lower than published in the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

4.5.2 The take-off minima selected for all flights by single-engine aeroplanes should be adequate to ensure a high probability of a successful forced landing being made should a failure of the engine occur after take-off.

### 4.6 Altimeter Error

4.6.1 When calculating Decision Height (DH), account must be taken of the errors of indicated height which occur when the aircraft is in the approach configuration. Details of the Pressure Error Correction (PEC) should be available from the aircraft Flight Manual or handbook. In the absence of this information a PEC of +50 FT has been found to be suitable for a wide range of light aircraft and should be used. This addition of 50 FT need only be applied to DH. The required RVR should be calculated prior to applying the PEC.

4.6.2 The use of a radio altimeter is only applicable to approved Category 2 and Category 3 operations. For an aircraft flying a Category 1 or non-precision IAP, DH/Minimum Descent Height (MDH) is indicated on the pressure altimeter. At DH/MDH any readings from a radio altimeter may be unreliable because of the large area of terrain providing return signals to the instrument.

4.6.3 Temperature Error. Pressure altimeters are calibrated to indicate true altitude under International Standard Atmosphere (ISA) conditions. Any deviation from ISA will therefore result in an erroneous reading on the altimeter. The altimeter will over-read for temperatures below ISA and the following table details the values to correct this error.

| Aerodrome | Altitude Above Altimeter Source Elevation (FT) (normally destination elevation) | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Temp °C | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 1500 | 2000 | 3000 | 4000 | 5000 |
| 0° | 20 | 20 | 30 | 30 | 40 | 40 | 50 | 50 | 60 | 90 | 120 | 170 | 230 | 280 |
| -10° | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 | 150 | 200 | 290 | 390 | 490 |
| -20° | 30 | 50 | 60 | 70 | 90 | 100 | 120 | 130 | 140 | 210 | 280 | 420 | 570 | 710 |
| -30° | 40 | 60 | 80 | 100 | 120 | 140 | 150 | 170 | 190 | 280 | 380 | 570 | 760 | 950 |
| -40° | 50 | 80 | 100 | 120 | 150 | 170 | 190 | 220 | 240 | 360 | 480 | 720 | 970 | 1210 |
| -50° | 60 | 90 | 120 | 150 | 180 | 210 | 240 | 270 | 300 | 450 | 590 | 890 | 1190 | 1500 |
| Values to be added to published altitudes (FT) | | | | | | | | | | | | | | |

### 4.7 Obstacle Clearance Height (OCH)

4.7.1 The DH/MDH for an approach is determined in part by considering obstacles that could affect the approach of a particular aircraft. In broad terms, the more accurate the aid supporting the approach to be flown and the slower the approach speed of the aircraft, the smaller the area in which obstacles need to be considered. The height which is calculated to clear all obstacles by a defined margin within a particular area is called Obstacle Clearance Height and is the lowest height above the elevation of the relevant runway threshold or above the aerodrome elevation used in establishing compliance with the appropriate obstacle clearance criteria.

4.7.2 The OCH is listed for individual aerodrome approaches on the relevant Instrument Approach Chart in section AD 2. For the

purposes of calculating OCH helicopters are categorised as Aeroplane Category A.

## 4.8 Determination of DH/MDH

4.8.1 **Instrument Rating Holders in Current Practice**

4.8.1.1 A pilot with a valid instrument rating and who is in current practice may use the minima calculated in accordance with this section.

4.8.2 **IMC Rating / IR (Restricted) Holder in Current Practice**

4.8.2.1 Pilots with a valid Instrument Meteorological Conditions (IMC) Rating or Instrument Rating (Restricted) (IR(R)) are recommended to add 200 FT to the minimum applicable DH/MDH, but with absolute minima of 500 FT for a precision approach and 600 FT for a non-precision approach. The UK IMC Rating / IR(R) may not be valid outside UK territorial airspace, therefore such pilots should check the validity of their rating for the State in which they intend to fly. If the rating is not valid pilots must comply with the basic licence privileges, subject to the regulations of that State.

4.8.3 **Pilots not in Current Practice**

4.8.3.1 A pilot not in current practice should try to avoid having to make an instrument approach in poor weather conditions. If pilots have to make such an approach, even if they are fully confident of their abilities, they are advised to add 100 FT to their calculated DH/ MDH. Further increments should be added depending on when the pilot was last in full practice, and their familiarity with the aircraft, the procedure and the aerodrome environment.

## 4.9 Approach Ban - All Aircraft

4.9.1 The requirements for the commencement and continuation of an approach (approach ban) applicable to all CAT operations is given in CAT.OP.MPA.305.

4.9.2 The approach ban requirements for public transport operations, aerial work and private operations are defined in the UK Air Navigation Order. The ‘specified’ minima are detailed below and reflect the UK Air Operations Regulation.

4.9.3 An aircraft may commence an instrument approach regardless of the reported RVR/Visibility but the approach shall not be continued below 1,000 FT above the aerodrome if the relevant RVR/Visibility for that runway is at the time less than the specified minimum for landing.

4.9.4 If, after passing 1,000 FT in accordance with paragraph 4.9.3, the reported RVR/Visibility falls below the applicable minimum, the approach may be continued to DA/H or MDA/H.

4.9.5 The approach may be continued below DA/H or MDA/H and the landing may be completed provided that the required visual reference is established at the DA/H or MDA/H and is maintained.

4.9.6 The touchdown zone Runway Visual Range (RVR) shall always be controlling.

## 4.10 Military aerodromes in UK Territorial Airspace

4.10.1 The majority of military aerodromes in the UK use PANS-OPS design criteria for their approach procedures; the method of determining AOM is as outlined above. Where additional criteria are needed to meet unique military requirements, Military Instrument Procedures and Standards (MIPS) are used. The MIPS used are NATO AATCP-1 Approach criteria and all charts utilising MIPS are clearly labelled.

There are 3 exceptions where aerodromes operate in accordance with FAA requirements, utilising TERPS design criteria: RAF Fairford, RAF Lakenheath and RAF Mildenhall. All associated charts are clearly labelled as TERPS.

4.10.2 For non-precision approaches the Procedure Minimum may be taken to be the OCH.

4.10.3 DH/MDH should then be determined as previously described and the related RVR obtained from AATCP-1.

4.10.4 OCH information will not be used at British Military Aerodromes.

4.10.5 Instrument Approaches and landings at UK Military Aerodromes are usually flown on QFE, as is flying in the visual circuit. Aircraft that are unable to comply with the above procedure should inform ATC and will be accommodated wherever possible.

## 4.11 Overseas Aerodromes

4.11.1 AOM at overseas aerodromes should not be lower than those published as State minima or permitted by the privileges of the pilot's

# AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

licence by the UK or overseas State.

### 4.12 Aerodromes Without Published Instrument Approach Procedures

4.12.1 For an aircraft landing at an aerodrome without an instrument approach procedure either:

a) a descent should be made in VMC until in visual contact with the ground, then fly to the destination; or
b) an IAP at a nearby aerodrome should be flown and proceed as in (a); or
c) if neither (a) nor (b) is possible, first obtain an accurate fix and then descend not lower than 1,000 FT above the highest obstacle within 5 NM (8 KM) of the aircraft. If visual contact (as at (a) above) has not been established at this height, the aircraft should divert to a suitable alternate with a published instrument approach procedure.

## 5 OTHER INFORMATION

# AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN

## 1 RESCUE AND FIRE FIGHTING SERVICES

1.1 The categories of fire and rescue equipment given at AD 2.6, their relevance to individual aircraft, and the minimum scales of equipment required to meet the respective categories are contained in Regulation (EU) No. 139/2014 as retained (and amended in the UK domestic law) under the European Union (Withdrawal) Act 2014, and associated rules and Civil Aviation Publication - CAP 168 - 'Licensing of Aerodromes'. They approximate closely to those contained in the relevant ICAO publications.

1.2 For the convenience of aircraft operators the relationship of the rescue and fire fighting categories to individual aircraft is summarised as follows: A = Aerodrome, H = Heliport

| Aerodrome Fire and Rescue Category | Aircraft Overall Length (M) | Fuselage Width (M) |
|---|---|---|
| ‡Special | 0 up to but not including 9 | 2 |
| A1 | 0 up to but not including 9 | 2 |
| A2 | 9 up to but not including 12 | 2 |
| A3 | 12 up to but not including 18 | 3 |
| A4 | 18 up to but not including 24 | 4 |
| A5 | 24 up to but not including 28 | 4 |
| A6 | 28 up to but not including 39 | 5 |
| A7 | 39 up to but not including 49 | 5 |
| A8 | 49 up to but not including 61 | 7 |
| A9 | 61 up to but not including 76 | 7 |
| A10 | 76 up to but not including 90 | 8 |
| ‡ Aerodromes which are generally licensed solely in order that flying instruction may take place. | | |

1.3 For the convenience of helicopter operators the relationship of the Rescue and Fire Fighting categories to individual helicopters is summarised as follows:

| Heliport Category | † Aircraft Overall Length (M) |
|---|---|
| ‡Special | 0 up to but not including 15 |
| H1 | 0 up to but not including 15 |
| H2 | 15 up to but not including 24 |
| H3 | 24 up to but not including 35 |
| † Helicopter length includes rotors and tail boom. | |
| ‡ Aerodromes which are licensed solely in order that flying instruction may take place. | |

## 2 RUNWAY SURFACE CONDITION ASSESSMENT AND REPORTING / SNOW PLAN

### 2.1 Organisation of the Runway Surface Condition Reporting and Winter Service

2.1.1 Agreement has been reached through the International Civil Aviation Organisation (ICAO) to apply standard procedures at international aerodromes within the European/Mediterranean Region, for the clearance of winter contaminants (frost, snow, ice, slush and associated water) from aerodrome surfaces and for the assessing and reporting of aerodrome surface conditions during adverse weather conditions. From 4 November 2021, UK aerodromes use the Global Reporting Format (GRF).

2.1.2 Prior to the onset of winter conditions, aerodrome operators prepare a plan to effect efficient clearance and measurement procedures intended to ensure maximum availability of the aerodrome. The plan is formulated in co-operation with Air Traffic Services and the aerodrome users. Arrangements are made to ensure that the plan can be implemented as soon as meteorological forecasts indicate the likelihood of surface contamination. The first priority is to clear operational runways and other essential parts of the movement area. Provision for assessment and reporting procedures are made. Subsequently, the surfaces cleared are maintained free of contaminant as far as is reasonably practicable.

### 2.2 Surveillance of Movement Areas

2.2.1 Surveillance of the movement area will be carried out typically from vehicles by trained aerodrome operator personnel. All reports will be based on human assessment of each runway third for % coverage, depth, and type of contaminant.

### 2.3 Measuring Methods and Measurements Taken

2.3.1 Continuous Friction Measuring Equipment (CFME) is not used for GRF purposes at UK aerodromes.

### 2.4 Actions Taken to Maintain the Usability of Movement Areas

2.4.1 Mechanical snow clearing equipment; blowers, sweepers, ploughs and rotary brushes form the main part of the contaminant clearance equipment used at most large aerodromes. Various methods are employed and brief details of those available at

## AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

individual aerodromes are given in the individual aerodrome entry of the AIP.

2.4.2 As far as practicable, clearance techniques employed prevent the build-up of snowbanks. Where this is unavoidable, every effort is made to restrict snowbanks to such a height and distance apart as to ensure safe manoeuvring of the most critical aircraft, in this context, normally using the aerodrome. Snowbanks are reported as soon as these are likely to affect safe manoeuvring by the most critical aircraft, in this context, normally using the aerodrome. Details of snowbanks will be notified in the situational awareness section of the SNOWTAM.

2.4.3 Slush and associated standing water are cleared whilst it is forming. Clearance may have to be repeated at intervals and some interruption of operations may be inevitable.

2.4.4 Salt is only used if it is found to be essential and is restricted to areas around edge drains to prevent slush build-up and to ensure continuous drainage. Liquid or other chemicals used for clearing ice on runways, taxiways and aprons are non-toxic and should have no detrimental effects on aircraft, aerodrome surfaces or the friction value of aerodrome pavements.

### 2.5 System and Means of Reporting

2.5.1 At UK aerodromes, ATS or the aerodrome operator according to local organisation, assess and report runway surface conditions.

2.5.2 UK aerodromes use the Global Reporting Format (GRF) which comprises an assessment by airport operations staff using a Runway Condition Assessment Matrix (RCAM) and the consequent assignment of a Runway Condition Code (RWYCC) ranging from 6 to 0. This code is complemented by a description of the surface contaminant based on type, depth and % coverage for each third of the runway. The code is based on the effect of the runway conditions on aircraft braking.

***Note:*** *With the introduction of the GRF the requirement to include supplementary information regarding the state of the runway in METAR is removed.*

| Runway Condition Assessment Matrix (RCAM) | | | |
|---|---|---|---|
| Assessment Criteria | | Downgrade assessment criteria | |
| **RWYCC** | **Runway surface description** | **Aeroplane deceleration or directional control observation** | **Special air-report of runway braking action** |
| 6 | DRY | - | - |
| 5 | FROST<br><br>WET<br>(The runway surface is covered by any visible dampness or water up to and including 3 MM depth)<br><br>**Up to and including 3 MM depth:**<br><br>SLUSH<br><br>DRY SNOW<br><br>WET SNOW | Braking deceleration is normal for the wheel braking effort AND directional control is normal | GOOD |
| 4 | **-15 °C and lower outside temperature:**<br><br>COMPACTED SNOW | Braking deceleration OR directional control is between good and medium | GOOD TO MEDIUM |
| 3 | WET (“slippery wet” runway)<br><br>DRY SNOW or WET SNOW (any depth) ON TOP OF COMPACTED SNOW<br><br>**More than 3 MM depth:**<br><br>DRY SNOW<br><br>WET SNOW<br><br>**Higher than -15 °C outside air temperature:**<br><br>COMPACTED SNOW | Braking deceleration is noticeably reduced for the wheel braking effort applied OR directional control is noticeably reduced | MEDIUM |
| 2 | **More than 3 MM:**<br><br>STANDING WATER<br><br>SLUSH | Braking deceleration OR directional control is between medium and poor | MEDIUM TO POOR |

# AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

| Runway Condition Assessment Matrix (RCAM) | | | |
|---|---|---|---|
| Assessment Criteria | | Downgrade assessment criteria | |
| RWYCC | Runway surface description | Aeroplane deceleration or directional control observation | Special air-report of runway braking action |
| 1 | ICE | Braking deceleration is significantly reduced for the wheel braking effort applied OR directional control is significantly reduced | POOR |
| 0 | WET ICE<br>WATER ON TOP OF COMPACTED SNOW<br>DRY SNOW or WET SNOW ON TOP OF ICE | Braking deceleration is minimal to non-existent for the wheel braking effort applied OR directional control is uncertain | LESS THAN POOR |

2.5.3 The outcome of the assessment and associated RWYCC are transmitted using a Runway Condition Report (RCR) forwarded to air traffic services and the aeronautical information services for dissemination to pilots. The pilots will use the RWYCC to determine their aircraft's performance by correlating the code with performance data provided by their aircraft's manufacturer. This will help pilots to correctly carry out their landing and take-off performance calculations for wet or contaminated runways.

***Note:*** *Information provided via the Runway Condition Report is disseminated by SNOWTAM regardless of the nature of the contaminant. WET runway conditions are included in the runway condition report (RCR).*

2.5.4 The assessment process of assigning a RWYCC is a deterministic process, starting with the identification of the various contaminants, that determines what initial RWYCC must be reported. Based on all other information available, this initial RWYCC can be downgraded or upgraded using procedures detailed aerodrome specific procedures.

2.5.5 The revised scale GOOD, GOOD TO MEDIUM, MEDIUM, MEDIUM TO POOR, POOR and LESS THAN POOR is used by the flight crew to characterize perceived braking action and lateral control of the aeroplane during landing roll. When an aerodrome receives pilot reports indicating a braking action perceived as worse than that being reported the aerodrome operator should consider reassessing the runway surface conditions. RWYCCs 0 through 6 are mapped to this terminology in the runway condition assessment matrix (RCAM) and describe a consistent runway surface condition in relation to its effect on aircraft braking performance and lateral control. The RCAM correlates the RWYCC, the agreed set of criteria and the aircraft braking action which the flight crew should expect for each value of the RWYCC.

2.5.6 The aerodrome operator reports the runway surface condition over each third of the runway using a runway condition report (RCR). The report includes a runway condition code (RWYCC) using numbers 0 to 6, the contaminant coverage and depth, and a description reported in capital letters using the following terms:

a) COMPACTED SNOW; (snow that has been compacted into a solid mass such that aeroplane tyres, at operating pressures and loadings, will run on the surface without significant further compaction or rutting of the surface);
b) DRY;
c) DRY SNOW; (snow from which a snowball cannot readily be made);
d) DRY SNOW ON TOP OF COMPACTED SNOW;
e) DRY SNOW ON TOP OF ICE;
f) FROST; (ice crystals formed from airborne moisture on a surface whose temperature is at or below freezing; frost differs from ice in that frost crystals grow independently and therefore, have a more granular texture);
g) ICE; (water that has frozen or compacted snow that has transitioned into ice in cold and dry conditions);
h) SLUSH; (snow that is so water-saturated that water will drain from it when a handful is picked up or will splatter if stepped on forcefully);
i) STANDING WATER; (water of depth greater than 3 MM);
j) WATER ON TOP OF COMPACTED SNOW;
k) WET;
l) WET ICE; (ice with water on top of it or ice that is melting);
m) WET SNOW; (snow that contains enough water to be able to make a well-compacted, solid snowball, but water will not squeeze out);
n) WET SNOW ON TOP OF COMPACTED SNOW;
o) WET SNOW ON TOP OF ICE.

***Note 1:*** *RCAM is used to allocate the appropriate Runway Condition Code to the runway surface description. The same contaminant may me associated with more than one RCC, depending mainly on depth (e.g. SLUSH, DRY SNOW, WET SNOW), temperature (COMPACTED SNOW) or additional conditions (WET).*

***Note 2:*** *WET condition can be associated with two Runway Condition Codes: 5, if the runway surface is covered by any visible dampness or water up to and including 3 MM depth; or 3, if the runway is "slippery wet". States that follow EASA Regulations additionally use SPECIALLY PREPARED WINTER RUNWAY for runway condition code 4 and the descriptor WET for runway condition code 3 is replaced by SLIPPERY WET.*

2.5.7 A standard depth gauge may be used to measure the depth of snow, slush or water on runways as part of the overall assessment. Readings are taken at approximately 300 M intervals between 5 and 10 M on each side of the centre-line and clear of the effects of rutting. By international agreement depth information is given in millimetres representing the mean of readings obtained for each

# AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

third of the total runway length.

## 2.6 The Cases of Runway Closure

2.6.1 Every attempt will be made to keep runways open and operational during adverse weather conditions. However as much advance notice of runway closure as possible will be provided to appropriate ATS Units and promulgated via NOTAM.

## 2.7 Distribution of Information about Runway Surface Conditions

2.7.1 Information on the current state of progress of snow clearance and on the conditions of the movement areas is available from a designated authority at the aerodrome concerned. Information on pavement conditions is also be available by RTF or ATIS from the aerodrome concerned.

2.7.2 Information on current surface conditions at UK and other European aerodromes generally is also available from the following sources:

a) SNOWTAM;
b) Automatic Terminal Information Service (ATIS);
c) RTF between ATS and aircraft operators.

2.7.3 The SNOWTAM provides a standard Runway Condition Report (RCR) which includes an assessment of each third of the runway including information on the runway designator, type, extent and depth of deposit.

2.7.4 The maximum validity of SNOWTAM is 8 hours. New SNOWTAM must be issued whenever a new RCR is prepared by the aerodrome. When no SNOWTAM is issued after 8 hours of a previous SNOWTAM for an aerodrome, the old SNOWTAM is expired and it should be assumed that there is no more significant runway surface condition to be reported.

2.7.5 ATIS message received by pilots includes operational runway direction, contaminant type, depth and percentage coverage.

2.7.6 RTF reports to pilots provide an assessment in plain language of the available runway length, including a description of the prevailing conditions i.e. ice, snow or slush, the Runway Condition Code, together with the time of the measurement.

# AD 1.3 INDEX TO AERODROMES AND HELIPORTS

| Aerodrome/Heliport name<br>Location Indicator | | Type of traffic permitted to use the aerodrome/heliport | | | Reference to AD section and remarks |

**CHANGE (9/25):** DONCASTER SHEFFIELD REMOVED.

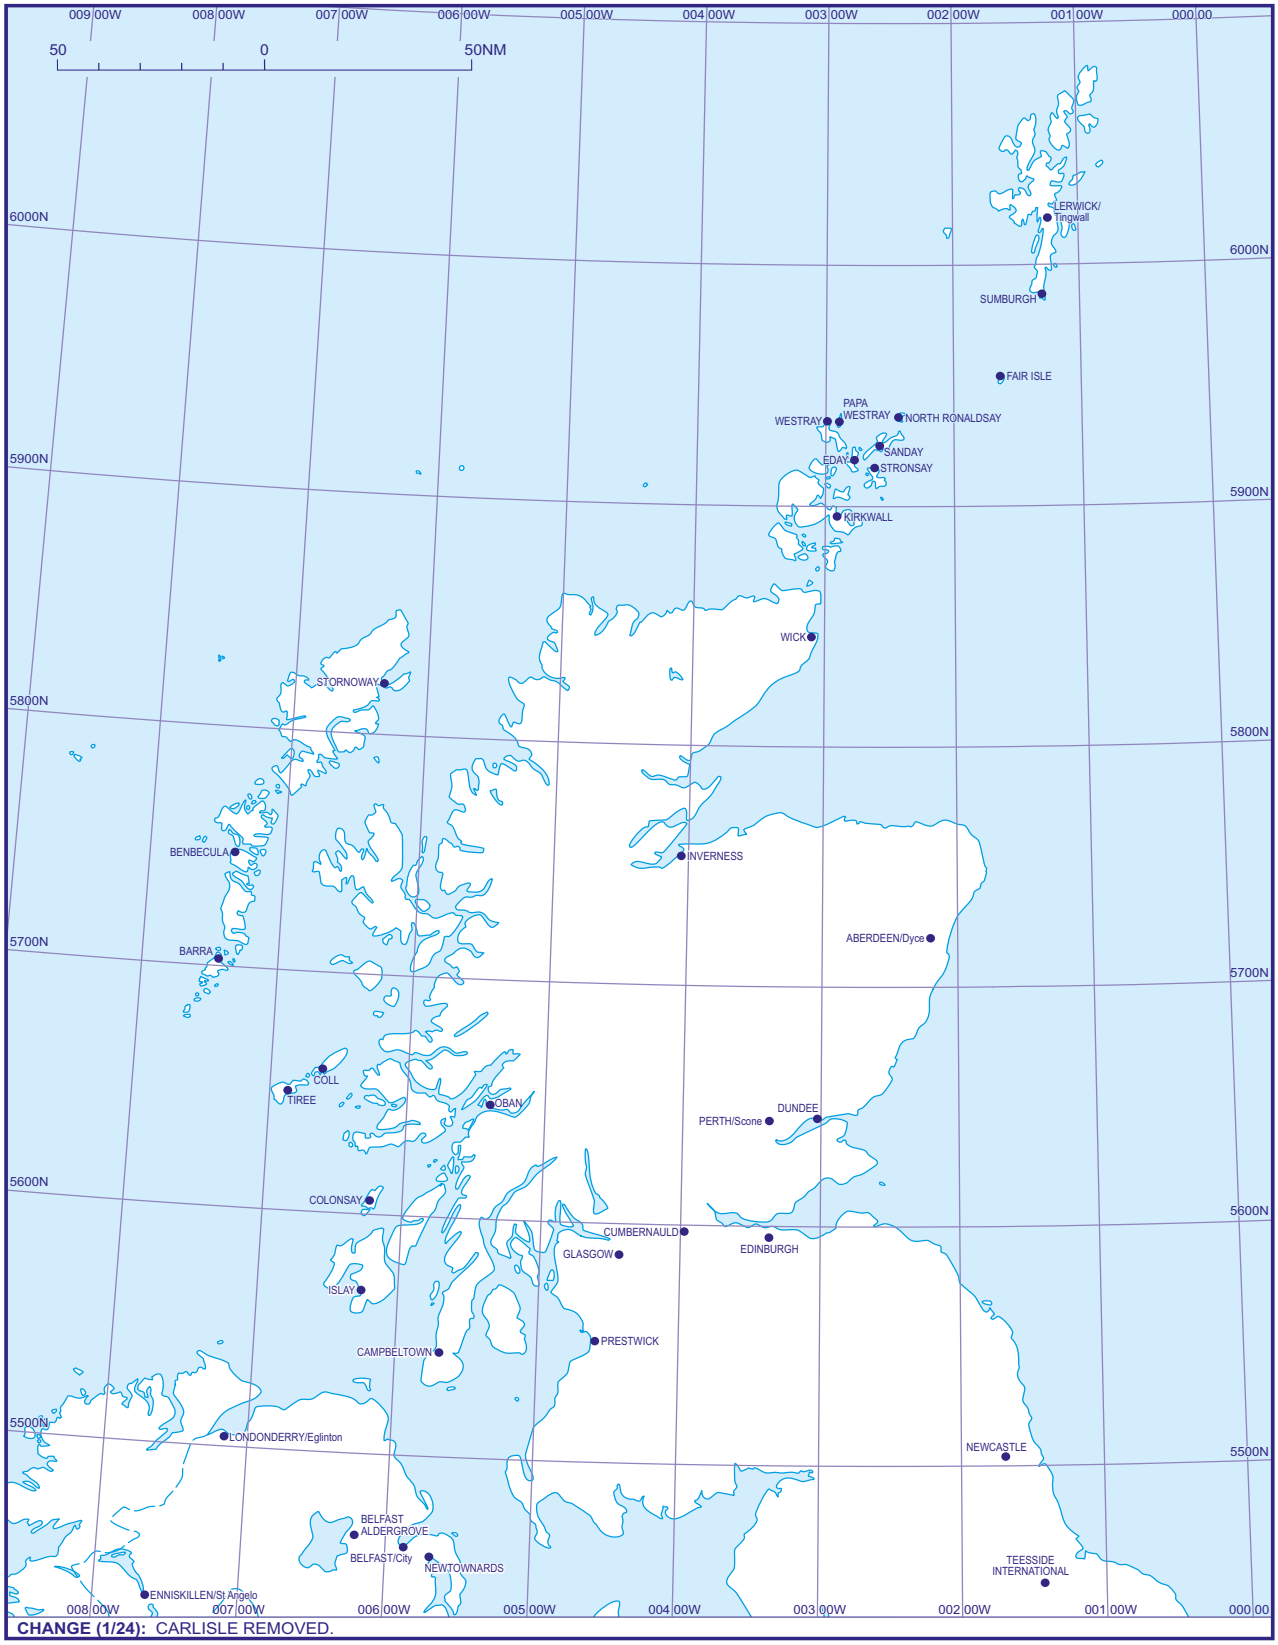
AERO INFO DATE 06 JUN 25

AD 1.3-4

**FOR THE LATEST CHANGES IN INFORMATION THIS CHART SHOULD BE CHECKED AGAINST THE AD 2 AND AD 3 SECTIONS OF THE UK AIP**

## AD 1.3 INDEX TO AERODROMES AND HELIPORTS (continued)

# AERODROMES LISTED WITHIN THE AD SECTION OF THE UNITED KINGDOM AIP



**CHANGE (1/24):** CARLISLE REMOVED.

AERO INFO DATE 30 OCT 23

AD 1.3-5

**FOR THE LATEST CHANGES IN INFORMATION THIS CHART SHOULD BE CHECKED AGAINST THE AD 2 AND AD 3 SECTIONS OF THE UK AIP**

**INTENTIONALLY BLANK**

# AD 1.4 GROUPING OF AERODROMES/HELIPORTS

## 1 Aerodrome Categorisation

1.1 Responsible Authority

1.1.1 The Civil Aviation Authority, through its Safety and Airspace Regulation Group (SARG), Manager Aerodromes and ATM, is responsible for the general surveillance of all licensed and certificated civil aerodromes in the United Kingdom. Enquiries relating to aerodromes and licensing/certification should be made to Aerodromes Sub-Department Tel: 01293-573419. See GEN 1.1 for address.

1.2 Licence Types

1.2.1 In the United Kingdom there are two types of civil aerodrome licence, namely Public Use Licence and Ordinary Licence.

1.2.2 Aerodromes or Heliports operated in accordance with a Public Use Licence must have their hours of availability notified in the UK AIP and the aerodrome/heliport must be available to all operators on certain equal terms and conditions. However, this does not necessarily mean that the aerodrome is available to all flights without limitation. Aircraft operators must check and comply with the requirements and conditions of use indicated at AD 2 or AD 3.

1.2.3 Aerodromes or Heliports operated in accordance with an Ordinary Licence may accept flights operated by the holder of the licence or by those specifically authorised by that licence holder. This normally means that prior permission is required for most flights but it does not exclude the possibility of scheduled or non-scheduled public transport flights being arranged after the formal agreement of the licence holder.

1.2.4 The annotations within column 4 of the table at AD 1.3 reflect the aerodrome/heliport licence type and must be interpreted in conjunction with the above descriptions and with the conditions of use indicated at AD 2 and AD 3.

1.3 Government Aerodromes

1.3.1 Detailed descriptions of Government aerodromes are not listed in the UK AIP.

1.3.2 Several Government aerodromes accept civil traffic subject to prior approval. These aerodromes are listed at AD 1.3 and detailed information about them is published in the UK Military documentation which is available to civil pilots on application to the RAF AIDU at Northolt (see GEN 3.2.3 for address and contact details).

1.3.3 Refer to AD 1.1 subsection 2 for general conditions of use.

1.4 Unlicensed Aerodromes/Heliports

1.4.1 Unlicensed Aerodromes/Heliports are not published in the UK AIP, except as detailed in Paragraph 1.4.2 below, however NOTAM may be issued notifying safety related changes affecting the operating conditions at any unlicensed Aerodrome/Heliport.

1.4.2 Where the CAA has approved a helicopter Point-in Space procedure (PinS) to an unlicensed Aerodrome or Heliport the unlicensed Aerodrome/Heliport will be published in the UK AIP AD 2 or AD 3. All PinS procedures are for use by CAA approved operators only, but details are published in the AIP to make airspace users aware of the presence of a PinS procedure and to assist users in taking appropriate mitigating actions in the vicinity of a PinS.

1.4.3 For further details regarding PinS refer to CAA Publication CAP2520 - Policy and Guidance for the implementation of Point-in-Space Helicopter Operations in the UK.

1.5 Aerodromes/Heliports published in the UK AIP that DO NOT operate under the conditions of IFR or SVFR are considered outside of the scope of Regulation (EU) 73/2010 (ADQ) and are listed here:

| Designator | Name |

| 11 | De-icing | See AD 2.4. |
| 12 | Remarks | Aerodrome Operator:<br>Delayed fixed-wing aircraft scheduled to operate 0600-2230 (0500-2130) must request extended opening by 2100 (2000). All other fixed-wing traffic must request extended opening with at least 24 hours notice.<br><br>Fixed-wing aircraft operating between 2300-0600 (2200-0500) must be Quota Category 4 or below as defined in the Department for Transport, Noise Restrictions Notice for London Airports published bi-annually as a Supplement.<br><br>Customs/Immigration:<br>Prior arrangement required before 2100 (2000) for scheduled delayed flights (international flights and domestic flights carrying interlined international passengers and their effects). Nonscheduled flights require prior arrangement with a minimum of 24 hours notice.<br><br>Fuelling:<br>Outside of operational hours AVTUR JET A-1 and AVGAS 100LL available by arrangement with Signature on 01224-723636. |

## EGPD AD 2.4 HANDLING SERVICES AND FACILITIES

| | | |
|---|---|---|
| 1 | Cargo handling facilities | By arrangement with Swissport. |

| | | |
|---|---|---|
| 2 | Fuel and oil types | AVTUR JET A-1, AVGAS 100LL |
| 3 | Fuelling facilities/capacity | |
| 4 | De-icing facilities | By arrangement with nominated handling agent. |
| 5 | Hangar space for visiting aircraft | |
| 6 | Repair facilities for visiting aircraft | |
| 7 | Remarks | All aircraft must have a handling agent appointed prior to arrival/departure.<br>Handling agencies are:<br>Dalcross Handling:<br>Tel: 01224-348517; Fax: 01224-348515; E-mail: abzops@dalcrosshandling.com; SITA: ABZDHXH; Frequency: 131.415 MHz<br>Signature:<br>Tel: 01224-723636; Fax: 01224-725458; SITA: ABZECXH; Frequency: 131.615 MHz<br>Operators must include Aberdeen Airport SITA address of ABZPA7X for all flights inbound to Aberdeen. |

## EGPD AD 2.5 PASSENGER FACILITIES

| | | |
|---|---|---|
| 1 | Hotels | Eight Hotels, 500 metres. |
| 2 | Restaurants | Restaurant and bar. |
| 3 | Transportation | Buses, taxis and car hire. Nearest railway station Dyce 2 NM. |
| 4 | Medical facilities | First aid treatment. |
| 5 | Bank and Post Office | Bureau de Change |
| 6 | Tourist Office | |
| 7 | Remarks | |

## EGPD AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

| | | |
|---|---|---|
| 1 | AD category for fire fighting services | RFF Category A7<br>RFF Category 8 available by arrangement. |
| 2 | Rescue equipment | |
| 3 | Capability for removal of disabled aircraft | Yes. Contact: 01224-725793 or 01224-725055. |
| 4 | Remarks | |

## EGPD AD 2.7 SEASONAL AVAILABILITY - CLEARING

| | | |
|---|---|---|
| 1 | Type of clearing equipment | Manoeuvring Area: Mechanical, Chemical de-icing. Apron Walkways: Chemical/granule de-icing. |
| 2 | Clearance priorities | Standard. See AD 1.2.2. |
| 3 | Remarks | Latest information from: Airside Operations; Tel: 01224-725055; ATC Tel: 01224-727160. |

## EGPD AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

| | | |
|---|---|---|
| 1 | Apron surface and strength | ECHO APRON<br>Surface: Concrete and asphalt<br><br>MAIN APRON<br>Surface: Concrete and asphalt |
| 2 | Taxiway width, surface and strength | Taxiway ECHO: 15 M<br>Surface: Asphalt<br><br>Taxiway MIKE: 23 M<br>Surface: Concrete and asphalt |
| 3 | Altimeter checkpoint location and elevation | Main Apron 204 FT Echo Apron 188 FT |
| 4 | VOR checkpoints | |
| 5 | INS checkpoints | See Aircraft Parking/Docking Chart. |
| 6 | Remarks | |

## EGPD AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

| | | |
|---|---|---|
| 1 | Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands | Stands 1A, 7A, 10A, 10L, 10R, 30 and 31 available under marshaller guidance only. Stand Guidance System on all other stands and Stop arrows (on Stands 6-14 and 17). Parking guidance facilities to be used from P1.<br><br>In some strong light conditions, pilots may experience glare on Safedock system (Stands 1-5, 15 and 16). If unable to correctly interpret Safedock guidance, pilots must request marshalling assistance. |
| 2 | Runway and taxiway markings and lighting | Runway marking aid(s):<br>16/34: Runway designation, runway threshold, runway edge lines and lights, runway/taxiway centreline, fixed distance, touchdown.<br><br>Taxiway marking aid(s):<br>Yellow centre-line paint marking.<br><br>Taxiway light(s):<br>Green centre-line on Taxiways Alpha, Charlie, Delta and Mike, blue edge lights and/or reflective markers on other taxiways. |
| 3 | Stop bars and runway guard lights (if any) | Red stop bars are located at holding points A4, C3, D2, E1, E2, E3, E4, E5, E6, E7, E8, E9, M1, M5, M7 and M9 and are in use at all times during the hours of ATC operation. No aircraft is to cross a red stop bar unless given a specific instruction to do so under escort from an Airside Operations vehicle. |
| 4 | Other runway protection measures | |
| 5 | Remarks | Aircrews are to note that the Stand Entry Guidance is activated by Airline and Handling Agent staff as prescribed in CAP 642. Aircrew should not enter the stand unless the stand guidance is illuminated or if advised that it is unserviceable, under marshaller guidance only. An emergency stop sign has also been installed on all SEG equipped stands. When activated, an electronic red flashing 'STOP' warning sign is illuminated. Aircraft must not enter the stand under any circumstances until the sign has been switched off.<br><br>Runway 05/23, Runway 14/32 and Runway 36 Helistrip designators and aiming point marked (Runway 23 only).<br><br>Three WDI: 571143.71N 0021124.09W (LGTD) - 571228.15N 0021222.45W (LGTD) - 571209.15N 0021211.76W (LGTD). |

# EGPD AD 2.20 LOCAL AERODROME REGULATIONS

## 1 AIRPORT REGULATIONS

a) All flights are subject to the prior approval of the Operations Director, Aberdeen International Airport Ltd and prior notification to Airport Coordination Ltd, who act as an agent for the airport. With the exception of General Aviation and Military flights, requests for ad-hoc slot allocations should be made to ACL during working hours, Mon-Fri 0830-1700 (0730-1600), by e-mail: lonacxh@acl-uk.org; or Tel: 0161-493 1850, Fax: 0161-493 1853, or at all other times to Airside Operations 01224-725055. OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com/default.aspx?AspxAutoDetectCookieSupport=1.
b) Use of the aerodrome for training purposes is subject to the prior permission of the Operations Director, Aberdeen International Airport Ltd.
c) Ground running of aircraft engines for test or maintenance is subject to the approval of the Operations Director, Aberdeen International Airport Ltd and shall be kept to the minimum consistent with operational needs. Ground runs are not permitted on Sun 1100-1300 (1000-1200).
d) Ambulance, Offshore Emergency and Medivac flights (including helicopters) are not subject to the restrictions as detailed in AD 2.3 Item 1 and Item 12 (paragraph 1).
e) Non-radio aircraft subject to PPR from ATC.
f) Use of APUs on Echo Apron is restricted to +/- 45 minutes from arrival or departure. Beyond this time, aircraft requiring power must use Ground Power Units arranged through the ground handling company.
g) Flight Planning: Any Flight Plan requiring submission must be faxed to ATC: 01224-727170. The Flight Plan Form (CA48/RAF F2919) must also contain a contact telephone number.

***Note:*** *Any Flight Plans sent to EGPDZPZX for onward transmission will not be actioned.*

## 2 GROUND MOVEMENT

a) Subject to apron capacity, aircraft not departing within 2 hours may be relocated to a remote parking area.
b) Only aircraft with a wingspan of 19 M or less are permitted to self manoeuvre on Stands 1 to 16, under marshaller guidance. Ground crews must be in attendance at such aircraft that intend to undertake this manoeuvre.
c) Pilots should always use the minimum power necessary when self-manoeuvring their aircraft on all areas of the aerodrome.
d) Standard pushback procedures for Stands 1-17 are:

i. All aircraft must conduct curved pushbacks from Stands 1, 1A, 9, 12, 13 and 14. Curved pushbacks from all other stands available on request with ATC. Aircraft on Stand 16 that require a curved pushback will be instructed to conduct a curved pushback behind Stand 17 to face east, followed by a pull forward manoeuvre behind Stand 15.
ii. Embraer E195-E2 on Stands 2, 3 and 4 and Airbus A321 on Stand 3 to conduct curved pushbacks.
iii. Aircraft of length 44 M or more (Airbus A321 or longer) to conduct a curved pushback from Stand 7 and 7A.
iv. Except as noted in (ii) and (iii), all aircraft from Stands 2, 3, 4, 5, 6, 7, 8, 10, 10L, 10R, 11, 15, 16 and 17 are to conduct straight pushbacks.

Powerback manoeuvres may be conducted from Stands 1-8, 10 (including 10L and 10R), 11 and 15-17 by aircraft of Jetstream 41 size or smaller. Powerbacks are not permitted from Stands 9 and 12-14.

ATC approval for all pushback manoeuvres must be obtained prior to pushback commencing. Pilots must inform ATC if the pushback manoeuvre issued cannot be conducted.

e) Remote hold available at Holding Point D1A (facing west) with the following restrictions:

i. Maximum wingspan size of 36 M. When the remote hold is in use, aircraft with a wingspan greater than 36 M must be escorted past the holding aircraft;
ii. Only one aircraft may use the remote hold at any one time;
iii. Use is granted on a strict order of request basis (to request the facility contact GMC or TWR);
iv. The remote hold is available 0600-0900 (0500-0800) and 2000-2230 (1900-2130) each day and by arrangement with Airside Ops and ATC;
v. ATC may remove the remote hold from use at any time;
vi. When the remote hold is in use, holding points D2 and A4 will not be available for aircraft movement;
vii. Remote hold is not available for use when Low Visibility Procedures are in force.

f) At all times, aircrew are responsible for their wingtip/rotortip separation and, if in any doubt, should stop, hold position and request marshaller assistance.
g) Taxiway Echo movement restrictions:

i. The section of Taxiway Echo between Holding Point E8 and the Compass Base is available to vehicles for non-towing movements only.
ii. Due to a 4% longitudinal slope along the section of Echo Taxiway between the NHV Apron and the Compass Base, all aircraft may taxi to/from the Compass Base from E9 under their own power with caution. During winter operations and periods of adverse weather, Airside Operations may temporarily close this section of taxiway or restrict the use of it to permit only aircraft under tow to access the Compass Base.

h) Holding Point T1 may only be used by aircraft with a wingspan up to 24.8 M.
i) Pilots will be issued with 'Runway in Use' and 'Pressure Setting' information prior to start-up clearance being given. There after, taxi instructions will contain only holding point designators.
j) Full ATC clearance is available from EOBT -15 minutes.
k) Aircraft vacating Runway 16 at Holding point M1 must not taxi beyond Holding point M2 without onward ATC taxi clearance.
l) Simultaneous aircraft movements through Holding points C3 and D2 are not permitted.
m) Pilots taxiing from Stands 30/31 should expect to turn left after leaving the stand onto Taxiway Charlie or Delta (depending on parking direction).
n) Pilots instructed to park on Echo Apron must park under marshaller guidance unless otherwise authorised by Airside Ops.

## 3 CAT II/III OPERATIONS

Not applicable.

## 4 WARNINGS

a) Except for light signals, ground signals are not displayed.
b) Intensive large helicopter activity.

Light aircraft should be aware of the possible effect of rotor downwash and wake vortices generated by large helicopters operating to/ from the aerodrome.

c) The width of the Taxiway Echo is 15 M and suitable for use by aircraft up to 20 M wingspan only unless under marshaller guidance. Use of Taxiway Alpha between A1 and A2 is restricted to aircraft not exceeding 19.7 M wingspan. The width of Taxiway Charlie between Taxiway Mike and Taxiway Bravo is 7.5 M and suitable for use by helicopters only.
d) PAPI approach slope guidance for Runway 16 should not be used until the aircraft is established on the extended centre-line of the runway.
e) Moderate/severe turbulence and windshear may be experienced on approaches to all runways when the 1000 FT wind exceeds 15 KT from the sector 200° through west to 320°.
f) Owing to the terrain around Bennachie (11 NM NW of Aberdeen Airport), GPWS warnings are possible on intermediate approach to Runway 16 from the south and west.
g) Occasional crane activity at the following positions (all relative to the ARP):

i. 255-280°/1000-1600 M up to 140 FT AGL;
ii. 355°/800-1400 M up to 115 FT AGL.

h) Pilots of aircraft departing from aerodromes located within the Aberdeen CTR must ensure they are in receipt of an explicit controlled airspace entry clearance prior to departure. It should be noted that the passing of flight plan details to ATC does not constitute a request for, or the issue of, a controlled airspace entry clearance.
i) Adverse weather conditions: Increased spacing on final approach may be in operation during periods of adverse weather conditions (cloud ceiling of 300 FT or less and/or IRVR 1000 M or less). Increased periods of holding may be required and operators should fuel plan accordingly.
j) Model aircraft flying at:

i. Haremoss' position 570515N 0020912W, approximately 1.5 NM northwest of Portlethen. Model aircraft not exceeding 13 KG in weight may be operated up to 400 FT AGL, daily, during daylight hours;
ii. Meikle Wartle position 572146N 0022656W and site elevation 420 FT AMSL, approximately 5 NM north-northwest of Inverurie. Model flying may take place above 400 FT AGL.

## 5 HELICOPTER OPERATIONS

a) Locally based operators may be authorised to carry out landings on Runway 23H independently of operations on Runway 16/34 in accordance with procedures approved by the CAA. The landing distance available for these operations is reduced to 220 M, the end of which is indicated by yellow runway guard lights and the E6 stop bar.
b) Night approaches and landings on Runway 23H are not permitted if the HAPI (Helicopter Approach Path Indicator) is unserviceable. Helicopters approaching Runway 23H must not descend below the HAPI glidepath before crossing the railway.
c) ICAO helicopter rotor clearances require minimum separation distances between the blade tips of two moving helicopters. Adequate separation exists between:

i. A helicopter holding at C3 and a helicopter turning from A4 onto Taxiway Delta;
ii. A helicopter holding at M5 and a helicopter using disused Runway 18;
iii. A helicopter holding at B1 and a helicopter on Taxiway Charlie between C1 and C2.

## 6 USE OF RUNWAYS

a) Runways 05H/23H, 14H/32H and 36H are only available for helicopter movements.
b) Runway 14/32 is not available for take-off and landing at night. However, ground and hover taxi movements on Runway 14/32 in order to access Runway 16/34 are permitted at night.
c) Runway 36

i. With the exception of paragraph 6c ii, Runway 36 is not available for any aircraft movements at night. Additionally, no aircraft movements on this section of manoeuvring area in the reciprocal direction to Runway 36 are permitted at night.
ii. Movements between Runway 16/34 and Holding Point M5 traverse part of Runway 36. Such movements are permitted at all times.

d) Pilots of departing aircraft must inform ATC if a backtrack is required from their runway holding point. This information should be passed to ATC prior to line up clearance being issued.

## 7 TRAINING

a) All training flights are subject to approval by ATC. General training flight acceptance policy:

   i. Mon-Fri: Instrument training flights by civil aircraft other than those based at Aberdeen Airport will not be accepted. Circuit training by military aircraft will not be accepted and military practice diversion instrument approaches limited to 0800-2000 (0700-1900) where approved by ATC;
   ii. Sat-Sun: Instrument training flights by civil aircraft are permitted subject to ATC approval. Military practice diversion instrument approaches limited to 0800-2000 (0700-1900) where approved by ATC;
   iii. Daily: Aircraft on EXAM callsigns will be accepted where approved by ATC.

b) Pilots of training aircraft carrying out go-arounds are advised that for the purposes of terrain clearance, that portion of the flight will be treated as a departure.
c) Training may be curtailed if significant noise complaints are received.

# EGPD AD 2.21 NOISE ABATEMENT PROCEDURES

All aircraft inbound to or outbound from this aerodrome are required to conform to the following procedures, notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.
b) Inbound IFR aircraft greater than 5700 KG may conduct Continuous Descent Approaches (CDA) from first contact with Aberdeen ATSU to an altitude of 4000 FT. In order to facilitate CDAs, when in receipt of an Approach Radar service and when ATC workload permits, controllers will attempt to provide appropriate descent instructions and distance from touchdown information on at least two occasions prior to reaching 4000 FT. Additional range checks may be requested by aircrew.

   Actual speed control will be issued by ATC as required for separation and sequencing purposes, however pilots conducting a CDA should expect speed restrictions of 250 KT or less below FL 100, 210 KT or less when 20 NM from touchdown and 160 KT or less when 10 NM from touchdown.

c) IFR aircraft shall not join final approach to either runway at a height of less than 1500 FT Aberdeen QFE unless they are propeller driven aircraft whose MTWA does not exceed 5700 KG when the minimum height shall be 1000 FT Aberdeen QFE.
d) In addition to paragraph 2.21(c), aircraft conducting an instrument approach shall not descend below 1800 FT Aberdeen QFE before intercepting the ILS or norminal glidepath nor thereafter fly below it. Aircraft landing without ILS assistance shall follow a descent path consistant with a 3° glidepath (or the approach procedure recommended profile if different).
e) Approach to Helistrip 23 aiming point should be on a heading of 218° (MAG).
f) Subject to Air Traffic Control requirements and weather conditions

   i. Training circuits should be undertaken to the west of the aerodrome;
   ii. Fixed-wing departures should be on Runway 34. Arrivals should be on Runway 16;

g) Aircraft operating between 2330-0600 (2230-0530) are requested to use minimal reverse thrust for noise abatement where this will not compromise the safe conduct of flight.

# EGPD AD 2.22 FLIGHT PROCEDURES

## 1 HOLDING

a) The main holding pattern will be based on the VOR ADN but ATC may request aircraft to hold at DOWNI, L ATF. Details of all these patterns are as follows.

| Holding Point | Details |
|---|---|
| VOR ADN | Holding axis 159° MAG, turning left at the facility. Lowest holding altitude 2500 FT. |
| DOWNI (570439N 0020621W) | Holding axis aligned on ADN VOR RDL 160° (Inbound track 340° MAG) between 15 DME ADN (DOWNI) and 20 DME ADN, turning right at the fix. Lowest holding altitude 2500 FT. |
| L ATF | Holding axis 339° MAG, turning right at the facility. Lowest holding altitude 2500 FT. |

## 2 ENTRY/EXIT LANES

a) To facilitate the operation of aircraft to and from Aberdeen/ Dyce Airport, the following entry/exit lanes have been established for use under the stated conditions and subject to the provisions of the Air Traffic Control rules as stated at ENR 1.4.

i. A lane, 3 NM wide, known as the Peterhead Lane with centre-line from Hackley Head 571949N 0015717W (a point on the Aberdeen CTR boundary) thence southwest along the coast to Bridge of Don, then along the River Don to the point at which it crosses the Aberdeen Aerodrome Traffic Zone;
ii. a lane, 3 NM wide, known as the Stonehaven Lane with centre-line from 565522N 0021200W (a point on the Aberdeen CTA boundary) thence northeast along the coast to Bridge of Don, then along the River Don to the point at which it crosses the Aberdeen Aerodrome Traffic Zone;
iii. a lane, 3 NM wide, known as the Inverurie Lane with centre-line the Aberdeen/Inverness railway line extending from 571931N 0023510W (a point on the western boundary of the Aberdeen CTR) through Inverurie and Kintore to the point at which it crosses the Aberdeen Aerodrome Traffic Zone. Additionally, for aircraft taking-off from Runway 16 or proceeding for a landing on Runway 34, a branch lane of similar width is established with centre-line the A96 road extending from Kintore to the point at which it crosses the Aberdeen Aerodrome Traffic Zone.

b) These lanes are shown at AD 2-EGPD-4-1.

i. Use of the lanes is subject to clearance being obtained from ATC Aberdeen, irrespective of prevailing weather conditions. This clearance is to be obtained by non-radio equipped aircraft before take-off and by radio equipped aircraft before entering the lane.
ii. Aircraft using the lanes must remain clear of cloud and in sight of the ground or water, not above 2000 FT Aberdeen QNH (unless authorised by Aberdeen ATC).
iii. An aircraft using a lane shall keep the centre-line on its left, unless otherwise instructed by ATC.
iv. Pilots of aircraft are responsible for maintaining adequate clearance from the ground or other obstructions.
v. When Runway 34 is in use, pilots operating on the Stonehaven Lane, should expect an ATC clearance to route offshore not above 1000 FT (Aberdeen QNH) when south of Girdleness.

## 3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Initial Departure Routings:

i. Pilots can expect that the initial 'after departure' instruction will usually contain a waypoint or heading that is not the first waypoint contained in the flight plan.

b) Pilots of aircraft at intermediate runway holding points that require a runway backtrack for departure should inform ATC prior to lining up on the runway.
c) On first contact with Aberdeen Radar, pilots of departing aircraft are required to report their passing altitude (based on Aberdeen QNH) and cleared altitude or Flight Level.
d) The width of Runway 16/34 is twice that promulgated in two locations due to additional pavement on the east side of the runway. Pilots lining up on Runway 16/34 abeam Holding Points M7 or E9, or at the Runway 34 threshold must ensure they are correctly lined up on the runway centre-line prior to departure.
e) The Preferred Departure Routes specified in the following table are compatible with ATC requirements and the tracks are to be flown by all departing jet aircraft and by all other departing aircraft of more than 5700 KG MTWA unless otherwise instructed by ATC or unless deviations are required in the interests of safety.

| Runway | ATC Clearance | Procedures |
|---|---|---|
| 16 | Via P600 GLESK | Climb straight ahead. At ADN DME 8.5 NM or 800 FT AAL whichever is the later, turn right to LAVTI (570818N 0022417W). At LAVTI turn left to GLESK. |
| 16 | Via ADN VOR Y904/Y905/P600 LESNI | Climb straight ahead. At ADN DME 8 NM or 600 FT AAL, whichever is the later, turn left to ADN VOR. At ADN VOR turn on course. |
| 34 | Via P600 GLESK | Climb straight ahead to 1000 FT AAL. After reaching 1000 FT AAL turn left to GLESK. |
| 34 | Via ADN VOR Y904/Y905/P600 LESNI | Climb straight ahead to ADN VOR. At ADN VOR turn on course. |

***Note:*** *See AD 2.22 3(a)(i) for additional after departure warning.*

## 4 ABERDEEN ROYAL INFIRMARY (ARI) OPERATIONS

a) Pilots of aircraft operating to/from ARI should be aware of the potential for conflictions and/or TCAS events to occur with aircraft operating to/from Aberdeen Airport. To reduce conflictions, the following procedures apply:

i. When inbound to ARI, pilots will be issued with departure instructions as follows:

1. For VFR departures: Hold overhead ARI not above 500 FT on Aberdeen QNH until in two way communication with ATC;
2. For Special VFR departures: Contact ATC by telephone when on the ground to obtain clearance.

ii. In the case of (b) pilots may attempt to contact ATC via RTF to obtain a clearance but if unable to establish two-way communications shall telephone 01224-727159 to pass flight details. A departure clearance will be issued with a departure time window (normally ETD to ETD +5, but will be subject to other traffic). Pilots unable to comply with this time window must telephone the number above to renegotiate the ETD.

b) Pilots must not depart from ARI unless in possession of a departure clearance from ATC.

## 5 VFR FLIGHTS

a) Pilots intending to conduct survey, inspection or photographic flights within Aberdeen CTR are requested to contact Aberdeen ATC on 01224-727160 prior to departure.

## 6 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

## 7 HELICOPTER ROUTES

a) **Arrivals**

Runway 16 in use

| Approach | Via | Route |
|---|---|---|
| IFR<br>Including Track WHISKEY | HMRI 026 to 086 | Track WHISKEY to Hackley Head then as directed by radar to ILS 16. |
| | HMRI 092 and greater | ADN DME 30 direct to Hackley Head then as directed by radar to ILS 16. |
| VFR/Special VFR | HMRI 026 to 086 plus Sumburgh | Track WHISKEY to Hackley Head - cross Hackley Head not above 1000 FT* - direct to join circuit. |
| Including Track WHISKEY | HMRI 092 only | 30 NM - direct Hackley Head cross Hackley Head not above 1000 FT* - direct to join circuit. |
| | HMRI 092 and greater | 30 NM - direct to GORSE then BOD. Cross BOD not above 1500 FT then join circuit.<br><br>(*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.) |

Runway 34 in use

| Approach | Via | Route |
|---|---|---|
| IFR<br><br>Including Track ECHO | HMRI 026 to 086 | Track ECHO to GORSE then as directed by radar to ILS 34. |
| | HMRI 092 and greater | ADN DME 30 direct to GORSE then as directed by radar to ILS 34. |
| VFR/Special VFR<br><br>Including Track ECHO | HMRI 026 to 062 plus Sumburgh | Track ECHO to ATSIB (572629N 0014337W) - VANOR (571408N 0020304W). Cross VANOR not above 1000 FT* pass south of Corby Loch to join circuit. |
| | HMRI 068 to 086 | 30 NM direct to ATSIB (572629N 0014337W) - VANOR (571408N 0020304W). Cross VANOR not above 1000 FT* pass south of Corby Loch to join circuit. |
| | HMRI 092 and greater | 30 NM - direct to GSE then to BOD. Cross GSE not above 1500 FT then join circuit.<br><br>(*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.) |

b) **Departure**

Runway 16 in use

| Standard Departure | Route | Altitude | HMRI |
|---|---|---|---|
| SPIKE IFR | After noise abatement, turn left to VANOR, then to SPIKE. After SPIKE, route via Track ECHO to intercept HMRI. | Cross VANOR at 3000 FT. | For HMRI 023 to 053 and Sumburgh. |
| SHRUB IFR | After noise abatement, turn left to SHRUB. After SHRUB intercept HMRI at 40 NM. | Climb to 3000 FT level by the coast. | For HMRI 059 to 101. |
| GORSE IFR | After noise abatement turn left to Bridge of Don then to GORSE, then to intercept the HMRI at 40 NM. | Cross BOD 3000 FT. | For HMRI 107 and greater. |
| ATSIB VFR/Special VFR | After noise abatement, turn left to pass south of Corby Loch via VANOR to ATSIB. Traffic for HMRI 045 to 104 route direct from ATSIB to intercept HMRI at 40 NM, north of HMRI 045 follow track ECHO to intercept HMRI. | Not above 1000 FT* to VANOR. After VANOR not above 1000 FT* or as directed by ATC.<br><br>(*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance). | For HMRI 101 and less including Sumburgh. |
| GORSE VFR/Special VFR | After noise abatement, turn left to Bridge of Don then to GORSE, then to HMRI at 40 NM. | Not above 1500 FT to Bridge of Don. After Bridge of Don not above 1500 FT or as directed by ATC. | For HMRI 107 and greater. |

Runway 34 in use

| Standard Departure | Route | Altitude | HMRI |
|---|---|---|---|
| PETOX IFR | After noise abatement turn right to PETOX, to intercept the HMRI radial south of PETOX, or after PETOX via track WHISKEY to intercept the HMRI, or continue on track to Sumburgh. | Intercept the HMRI radial at 3000 FT or cross PETOX at 3000 FT. | For HMRI 071 and less. |
| Forties IFR | After noise abatement, turn right to NOBAL, After NOBAL intercept the HMRI at 40 NM DME. | Cross NOBAL at 3000 FT. | For HMRI 077 and greater. |
| SPIKE VFR/Special VFR | After noise abatement turn right to Hackley Head then direct to SPIKE then track ECHO to HMRI (or HMRI enroute to SPIKE). | Not above 1000 FT* to Hackley Head. After Hackley Head not above 1000 FT* or as directed by ATC.<br><br>(*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.) | For HMRI 071 and less, including Sumburgh. |
| HACKLEY VFR/Special VFR | After noise abatement turn to Hackley Head to HMRI at 40 NM. | Not above 1000 FT* to Hackley Head. After Hackley Head not above 1000 FT* or as directed by ATC.<br><br>(*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.) | For HMRI 077 and greater. |

## 8 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the Aberdeen area of responsibility, but intending to remain outside Class D airspace within the area bounded by the following coordinates and maintaining a listening watch only on Aberdeen Radar frequency, 119.055 MHz, are encouraged to select SSR code 4270.

564236N 0022113W - thence clockwise by the arc of a circle radius 30 NM centred on 571209N 0021153W to 573600N 0013814W - 564236N 0022113W.

b) Selection of 4270 does not imply the receipt of an ATC service. Pilots of aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Class D airspace at all times.
c) Whilst squawking 4270, pilots should be aware that Aberdeen Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 4270 shall be deselected.

| See AD 2.18 for details. | | |

For **MINIMUM INITIAL ALTITUDE** see EGPD 5-2.

**OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA**

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

**LOSS OF COMMUNICATION PROCEDURES**

**Initial Approach**

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher, to **ADN VOR** or **NDB(L) ATF** as appropriate to the procedure being flown†.

**Intermediate and Final Approach**

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **ADN VOR** or **NDB(L) ATF** as appropriate to the procedure being flown†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

**GENERAL INFORMATION**

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL055, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**

**CHANGE (8/25):** SMAA BOUNDARIES REVISED. ALTITUDES REVISED.

AERO INFO DATE 19 MAY 25

AD 2-EGPD-5-1

## ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

## ABERDEEN/DYCE

**MINIMUM INITIAL ALTITUDE**

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 572823N 0021953W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572101N 0015803W - 570903N 0015030W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 565810N 0015518W - 571838N 0021602W - 572823N 0021953W.

b) **2300** in the sector defined by the lateral limits; 572525N 0022935W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572823N 0021953W - 571838N 0021602W - 565810N 0015518W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 565533N 0020835W - 570410N 0021455W - 572525N 0022935W.

c) **2800** in the sector defined by the lateral limits; 571453N 0023307W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572525N 0022935W - 570410N 0021455W thence clockwise by an arc of a circle radius 14.5NM centred on 571838N 0021602W to 570527N 0022702W - 571453N 0023307W.

d) **3200** in the sector defined by the lateral limits; 570527N 0022702W thence anticlockwise by an arc of a circle radius 14.5NM centred on 571838N 0021602W to 570410N 0021455W - 565533N 0020835W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 570224N 0022504W - 570527N 0022702W.

Further descent to **1300** may be given within the Approach Areas shown when on 40° leg or Final Approach.

**CHANGE (8/25):** AREAS A,B,C BOUNDARIES REVISED. ARC CENTRES REVISED.

## EGJA AD 2.20 LOCAL AERODROME REGULATIONS

### 1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Channel Islands CTR.
b) All aircraft using Alderney Airport and its facilities must comply with the requirements of the United Kingdom Civil Aviation (Insurance) Regulations 2005 and any future published amendments to these Regulations.
c) The use of the aerodrome is subject to 'Airport Terms and Conditions of Use'. These are available from Airport Administration, Tel: 01481-227766 or on the Guernsey Airport website (www.guernsey-airport.gov.gg).
d) The Director of Civil Aviation for the Bailiwick of Guernsey has issued Exemptions from the Air Navigation (Bailiwick of Guernsey) Law 2012 authorising operations in Bailiwick of Guernsey airspace including Guernsey and Alderney Airports, by home-built aircraft registered in ECAC Member States, and non-home-built aircraft registered in the UK, Ireland and France, operating on a National airworthiness certificate. (Separate exemptions extend the effect to Jersey Airport and Jersey Airspace).

   Note that the exemptions do not exempt the pilot or operator from obtaining permission from Jersey ATC for flight in the Channel Islands Control Zone, from Guernsey ATC for flight in Guernsey airspace and use of Guernsey and Alderney Airports, or from the requirement to carry a transponder whilst flying within the Channel Islands Control Zone.
e) On arrival, pilots and passengers of all General Aviation aircraft must report to Flight Clearance to carry out Special Branch and Customs clearance.
f) All commercial flights and aircraft over 4 tonnes MTOW using Alderney Airport are required to use the services of a handling agent.

g) The operator of an aircraft carrying dangerous or hazardous cargo must notify the Aerodrome Fire Service, Tel: 01481-822551 prior to the arrival of the aircraft or before loading of cargo prior to departure from the aerodrome. The carriage of such cargo is subject to a permission granted under the Air Navigation (Bailiwick of Guernsey) Law 2012.
h) All aircrew and persons employed at Alderney Airport whilst airside, are required to wear high visibility clothing at all times. Aircrew wearing high visibility clothing must escort passengers (not wearing high visibility clothing) to and from their aircraft. Pilots in charge of aircraft are responsible for ensuring that their crew and passengers comply with these requirements.
i) Due to restricted apron parking all aircraft requiring parking on the hard apron must request prior permission, Tel: 01481-822851. This does not apply to locally based aircraft and scheduled services.
j) In respect of Aerodrome Operating Minima, the notified method of calculating Aerodrome Operating Minima for the purposes of the Air Navigation (Bailiwick of Guernsey) Law 2012 shall be that published in the UK AIP, Section AD 1.1 subsection 4, Aerodrome Operating Minima.
k) Applications for civilian formation flights in Special VFR within the CI Control Zone should ideally be made in writing or by e-mail to Jersey ATC Operations (atc.ops@jerseyairport.com) ideally with a minimum of seven days notice. Short notice application may be made to the Jersey ATC Watch Manager, Tel: +44 (0)1534-446086.

## 2 GROUND MOVEMENT

a) Grass Taxiway A and light aircraft parking area connects apron to Runway 21 threshold and is also used as a taxiway route from other runways to apron.
b) To prevent hazards to taxiing aircraft all chocks and picketing blocks should be removed to the edge of the parking area after use.

## 3 CAT II/III OPERATIONS

Not applicable.

## 4 WARNINGS

a) Arriving and departing aircraft on Runway 08/26 may observe a white RVR light at the upwind end of the runway, in the approach lights when the runway edge lights are on.
b) Caution advised due to turbulence caused by nearby cliffs.
c) Low boundary fence installed short of Runway 03 and 31 thresholds showing orange/white markers.
d) Due to coastal location, birds, including a large number of pheasants on the aerodrome, are a hazard throughout most of the year. This hazard level is raised during the migration season.
e) The aerodrome boundary fence 0.9 M high to the north and south of Runway 08/26 between the 08 threshold and the intersection with Runway 13/31 is within the runway strip.
f) The aerodrome boundary fence 0.9 M high to the north and south of Runway 08/26 between the 26 threshold and the intersection with Runway 03/21 is within the runway strip.
g) In Approach/Take-off Areas Obstruction: 26/Approach 08/Take-off Track 303 FT AMSL 494228.98N 0021228.78W.
h) Runway 08/26, between the thresholds of the runway, standing water may be present in excess of 3 MM in depth during and after periods of rain.

## 5 HELICOPTER OPERATIONS

Not applicable.

## 6 USE OF RUNWAYS

a) Pilots are advised to take particular note of the following - Grass Runways 03/21 and 13/31 have undulations across the entire length and width. The surface of both grass runways is rough and uneven.

## 7 TRAINING

a) Circuit training must be booked in advance with Alderney Tower Tel: 01481-822851.
b) Instrument training must be booked in advance with Guernsey Approach Tel: 01481-227766, ext 2130.
c) A request message in item 18 of an FPL does not constitute a request for training.

# EGJA AD 2.21 NOISE ABATEMENT PROCEDURES

a) All aircraft must conform to the following procedures, which may be departed from only to the extent necessary for avoiding immediate danger.

   i. Every operator using the airport shall ensure that at all times aircraft are operated in a manner calculated to cause the minimum disturbance practicable over all parts of the Island. In particular pilots will avoid overflying St Annes below 700 FT AAL.
   ii. Circuit procedures - Standard circuit height for joining and training is 700 FT AAL. Circuit training only permitted on Runways 08/26 and 13/31 and whenever possible, circuits to be confined to the West of 13/31 or South of 08/26.
   iii. Unless otherwise authorised or instructed by Air Traffic Control the above procedures shall apply to all aircraft approaching, landing, going around or taking-off in accordance with Air Traffic Control clearance and shall apply in both VMC and IMC.

# EGJA AD 2.22 FLIGHT PROCEDURES

## 1 RADIO COMMUNICATION FAILURE PROCEDURES

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1.
b) Radio Failure in the Circuit

i. The pilot of an aircraft in the circuit experiencing radio failure should set the transponder code to 7600, and make one orbit away from the airfield. At the end of the downwind leg, proceed to final and land, providing the runway is clear.
ii. The pilot of an aircraft on base leg or final, having been cleared to final when the failure occurs, should, if time permits, change code to 7600, continue the approach and land, providing the Runway is clear.
iii. The pilot of a non transponder equipped aircraft should adopt the same procedure as in i, or ii.

## 2 INBOUND/OUTBOUND PROCEDURES

a) Arrival routes at AD 2-EGJA-7-1 may be varied at the discretion of ATC.
b) Procedures for Outbound Aircraft.

i. Standard Outbound Routes to Airways.
ii. Standard departure routes for aircraft joining the airways system are detailed below.

| Departures to | Via | Route |
|---|---|---|
| North | Q41 | ORTAC - THRED |
| North East | G271 | AGANO[3] - GULDA - BENIX[1] |
| East | N160 | AGANO[3] - LUSIT - CAN[2] |
| South East | V20 | ORVAL - UPALO |
| South | R14/A25 | MINQI - DIN |
| South West | G27 | LERAK - BADUR |
| West | N160 | TUNIT - LIZAD |
| North West | N862 | SKERY - BHD |

***Note 1:*** *For airfields East of London. Flights inbound to EGLC may route via ORTAC.*

***Note 2:*** *Not available above FL 90.*

***Note 3:*** *Position of AGANO - 493954N 0020000W.*

c) Aircraft Outbound to the FIR

i. IFR flights wishing to leave the Channel Islands Control Zone to enter the London or Brest FIR's will normally be cleared by the most direct route consistent with the current traffic situation.
ii. VFR and Special VFR flights will normally be instructed to route via/to one of the Visual Reference Points, as detailed at EGJJ AD 2.22 and AD 2-EGJJ-3-1.

## 3 VFR FLIGHT

a) A flight plan must be filed for all flights within and intending to transit the Channel Islands CTR. For flights between Guernsey and Alderney and vice versa, abbreviated flight plan details may be submitted on forms available at either aerodrome.
b) VFR clearance to operate within the Alderney ATZ will not be granted if the reported visibility is less than 5 KM or the reported cloud ceiling is less than 1500 FT in accordance with SERA.5001.
c) Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
d) Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5001. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
e) VFR Flights may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

## 4 SPECIAL VFR FLIGHT

a) Prior Permission

i. A flight plan must be filed for all Special VFR flights in the Channel Islands CTR. For flights between Guernsey and Alderney and vice versa, abbreviated flight plan details may be submitted on forms available at either aerodrome.
ii. Special VFR clearances for flights within the Channel Islands CTR may be requested and will be given whenever traffic conditions permit. Special VFR flights within the Alderney ATZ will be subject to the general conditions laid down for Special VFR flights in SERA.5010. Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.

iii. The use of Special VFR clearances is intended to be limited to light aircraft which cannot comply with full IFR requirements and wish to proceed to or from an aerodrome within or to transit the Channel Islands CTR.

b) Special Routes

i. Aircraft operating in accordance with Special VFR will normally be cleared via the published VRPs or on tracks to/from adjacent aerodromes or navigation aids, or as per flight planned route.
ii. Special VFR may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

c) Weather Minima

i. Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5010. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
ii. Special VFR clearances to operate within the Alderney ATZ will not be granted to a fixed wing aircraft if the reported visibility is less than 1500 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iii. Special VFR clearances to operate within the Alderney ATZ will not be granted to a helicopter if the reported visibility is less than 800 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iv. The Director of Civil Aviation has approved the issue of Special VFR clearances at night.

## 5 SARK RESTRICTED AREA

a) Pilots are to note that flight is not permitted at a height of less than 2000 FT above ground level within 3 NM of 492546N 0022145W on the Island of Sark (EGR095) except with the permission of the Channel Islands Director of Civil Aviation or from Guernsey ATC as necessary.

## 6 FLIGHT PLANS

a) See ENR 1.11.

## 7 CARRIAGE AND OPERATION OF SSR TRANSPONDERS

a) The carriage and operation of SSR transponder equipment with the following capability is mandatory when flying within the Channel Islands CTR, CTA or TMA:

i. when operating as a VFR or Special VFR Flight;
ii. when operating under IFR - Mode A 4096 codes and Mode C with altitude reporting capability.

b) Exemptions from the requirements may be given in the following circumstances:

i. for notified agreed events such as air rallies etc., applications for exemption must be made in writing to Manager - Air Traffic Control, Jersey Airport, Channel Islands, Email: atc@jerseyairport.com at least one calendar month before the event;
ii. for short notice exemptions, applications must be made to the Watch Supervisor, Jersey Airport, Tel: 01534-446086 giving full details. Such exemptions will not normally be granted unless it is considered that exceptional circumstances exist.

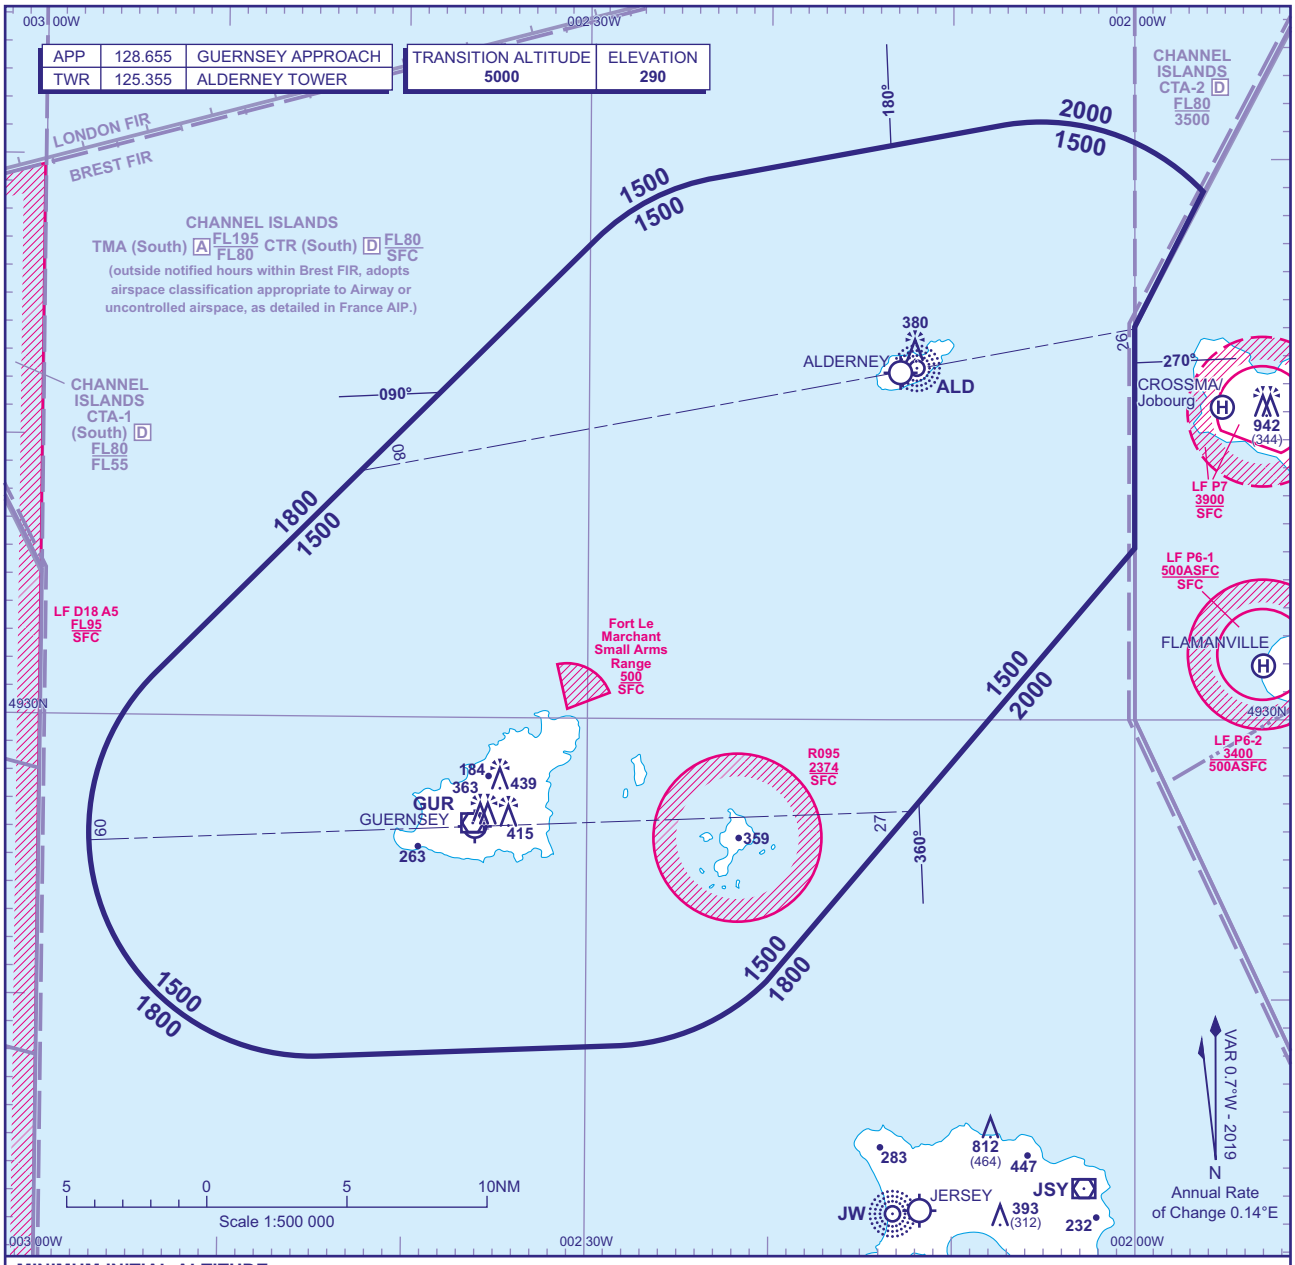
## ALDERNEY



### MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the radar controller is **1500** in the sector defined by the lateral limits; 493129N 0025341W - 494705N 0022941W thence clockwise by an arc of a circle radius 8NM centred on 494125N 0022058W to 494919N 0022301W - 495113N 0020710W thence clockwise by an arc of a circle radius 8NM centred on 494320N 0020510W to 494850N 0015613W - 494401N 0020000W - 493607N 0020000W - 492038N 0022007W thence clockwise by an arc of a circle radius 8NM centred on 492618N 0022846W to 491818N 0022821W - 491751N 0024431W thence clockwise by an arc of a circle radius 8NM centred on 492551N 0024458W to 493129N 0025341W.

### OUTSIDE THE DESIGNATED APPROACH SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

### LOSS OF COMMUNICATION PROCEDURES

**Initial Approach**
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **ALD NDB(L)**†.
**Intermediate and Final Approach**
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **ALD NDB(L)**†.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

### GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights area shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
