HEIGHTS IN FEET AGL (260)

BELFAST/ CITY

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 544924N 0054828W thence clockwise by an arc of a circle radius 8NM centred on 544127N 0054707W to 543636N 0053610W - 542737N 0054658W thence clockwise by an arc of a circle radius 8NM centred on 543227N 0055753W to 543049 0061119W - 543020N 0060024W - 543708N 0055218W - 544659N 0054421W - 544924N 0054828W.

b) **2300** in the sector defined by the lateral limits; 544924N 0054828W - 544659N 0054421W - 543958N 0055001W - 544409N 0060039W - 544616N 0055807W - 544924N 0054828W.

c) **2800** in the sector defined by the lateral limits; 544409N 0060039W - 543958N 0055001W - 543708N 0055218W - 543020N 0060024W - 543049N 0061119W thence clockwise by an arc of a circle radius 8NM centred on 543227N 0055753W to 543714N 0060853W - 544409N 0060039W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2900**, or last assigned level if higher to **NDB(L) HB**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) HB**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be Issued If the aircraft Is either establlshed on the flnal approach track or on an Intercept of 40° or less, and In the case of Instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (12/26): MAZE HELIPORT ADDED.

EGPL AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use of Benbecula aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.
b) High Visibility Clothing is to be worn when airside.
c) Unmanned Air System (UAS) operators should request permission from Benbecula ATS at least 24 hours in advance of the flight within the Flight Restricted Zone (FRZ) to allow sufficient time for impact assessment and NOTAM action.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Intensive military activity takes place in the vicinity. ATS/ATIS will advise EGD701A-F, EGD701Y and EGD704 activity. Instrument approaches to Runway 06 may not be available or may be restricted during periods of activity. The entry procedure from the BEN VOR and the BBA NDB, for instrument approaches to Runway 24, may not be available or may be restricted during periods of activity.
b) The aerodrome is frequently opened for Air Ambulance and SAR flights outside published hours.
c) The use of the aerodrome is unavailable for 'out of hours' permit holders due to airport security restrictions.
d) All taxiways are closed, except between threshold of Runway 06 and the apron.
e) There are no marked parking stands on the apron due to rapid changes in wind conditions, marshallers will be provided when possible.
f) Grass areas are soft and unsafe. Poor load bearing characteristics may be found on the runway/taxiway strips and the area adjacent to the apron. Only marked taxiway to be used.
g) The apron area is subject to aerodrome security procedures during published hours.
h) Flocks of geese present on, and in fields adjacent to, the aerodrome, all year round.
i) Runway 24 during strong winds, moderate turbulence may be experienced on final between 8 to 4 NM.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

a) Whenever weather conditions allow, the preferred runway for landing is Runway 24 and the preferred runway for departure is Runway 06.
b) Runway departure restriction for aircraft requiring the use of a licensed aerodrome:

    i. **Runway 06/24**. Except where an AOC holder has a less restrictive State authorised take-off minima, departures in RVR conditions of less than 400 M are not permitted

7 TRAINING

a) Training flights are subject to prior approval and acceptance by ATC.

EGPL AD 2.21 NOISE ABATEMENT PROCEDURES

Not applicable.

EGPL AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5

2 NORTH ATLANTIC DEPARTURES

a) Due to the proximity of the Shanwick Oceanic boundary to Benbecula, pilots must consider time scales for submitting an ’RCL’. Refer to ENR 2.2, paragraph 3.8.2 for details.

3 AIR TRAFFIC SERVICES OUTSIDE CONTROLLED AIRSPACE

a) During notified ATC Hours of service:

i. A procedural service will be routinely applied for IFR flights. Pilots will be expected to accept levels, radials, tracks and/or time allocation.
ii. A basic service will be applied to VFR flights. IFR flights may request a basic service.

b) Outside notified ATC Hours of service:

i. A basic service will be applied to SAR and Ambulance flights by a Flight Information Service Officer.

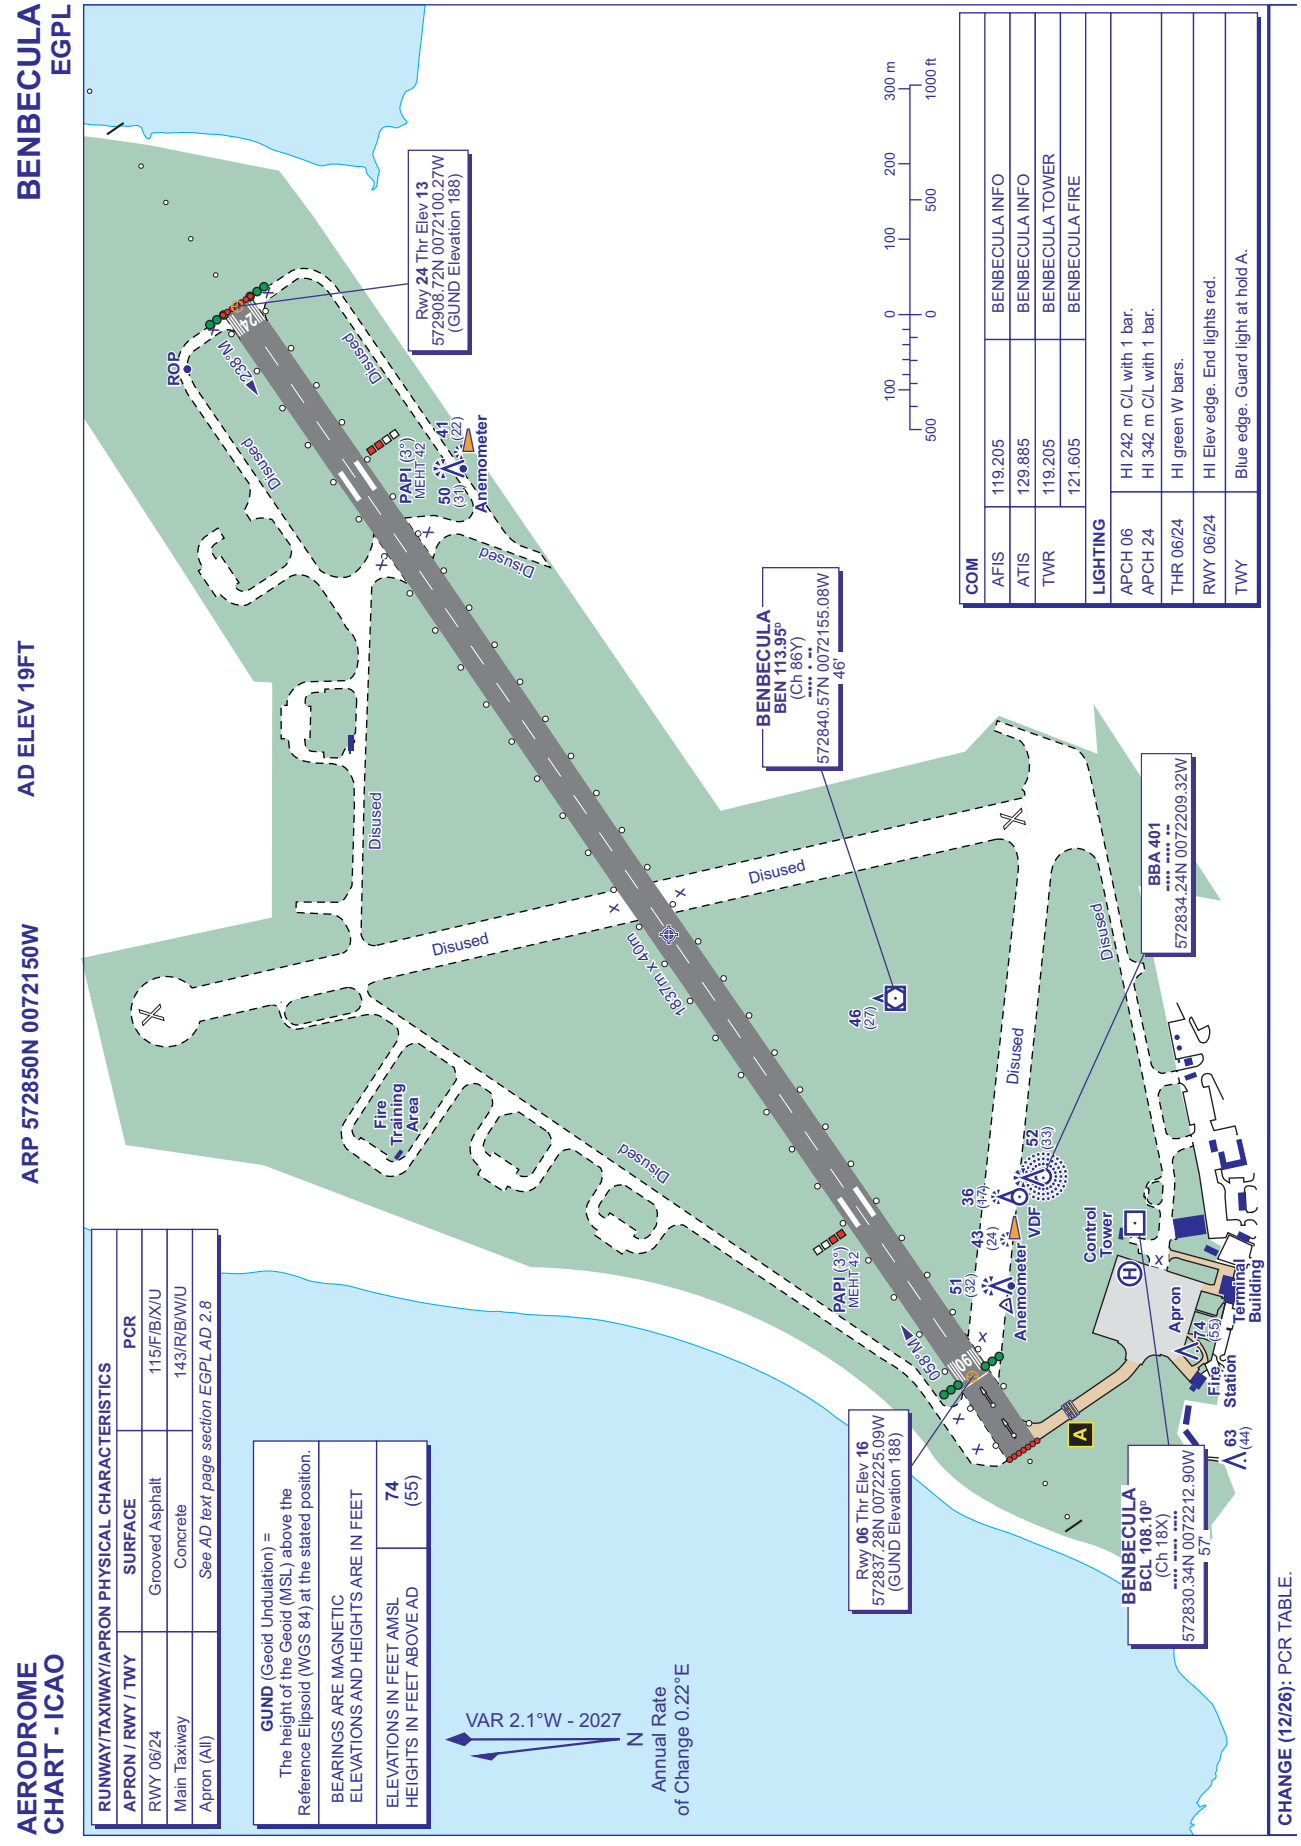
4 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

5 CIRCUITS

a) Circuit Height: 1000 FT AAL unless instructed by ATC.
b) Circuit Directions: Runway 06 - LH; Runway 24 - RH.
c) Joining instructions as instructed by ATC.

EGPL AD 2.23 ADDITIONAL INFORMATION



a) Aircraft operators are responsible for the searching of any aircraft parked either overnight or within the demarcated area prior to departure.

AERO INFO DATE 21 NOV 25

EGKB — BIGGIN HILL

EGKB AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGKB — BIGGIN HILL

EGKB AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 511951N Long: 0000157E
2	Direction and distance from city	12 NM SSE of London
3	Elevation / Reference temperature / Mean Low Temperature	584 FT / 20 °C / -
4	Geoid undulation at AD ELEV PSN	149 FT
5	Magnetic Variation / Annual Change	1.39°E (2027) / 0.17°E
6	AD Administration Address Telephone E-mail address Web address	BIGGIN HILL AIRPORT LTD. Biggin Hill Airport, Biggin Hill, Kent, TN16 3BH 01959-578500 (Admin) 01959-578525 (ATC/Ops/Fuel) 01959-578552 (Handling) operations@bigginhillairport.com www.bigginhillairport.com
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGKB AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Fri 0630-2300 (0530-2200); Sat, Sun and PH 0800-2200 (0700-2100).
2	Customs and immigration	UK Border Force available during AD operational hours. UK GAR (General Aviation Report) required prior to international arrivals.
3	Health and sanitation	As AD Hours.
4	AIS Briefing Office	As AD Hours.
5	ATS Reporting Office (ARO)	As AD Hours.
6	MET Briefing Office	As AD Hours.
7	ATS	See also AD 2.18.
8	Fuelling	As AD Hours.
9	Handling	As AD Hours.
10	Security	H24
11	De-icing	As AD Hours.
12	Remarks	Use of this aerodrome is strictly PPR. Operations are not permitted outside of aerodrome operating hours.

EGKB AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Contact Biggin Hill Airport Flight Operations.
2	Fuel and oil types	JET A-1, Sustainable Aviation Fuel (SAF JET A-1), AVGAS 100LL Oils by arrangement.
3	Fuelling facilities/capacity	JET A-1 fuel truck, SAF JET A-1 fuel truck, AVGAS 100LL self serve pumps, truck on request. Defueling available on request.
4	De-icing facilities	Yes – Contact Biggin Hill Airport Flight Operations.
5	Hangar space for visiting aircraft	Yes.
6	Repair facilities for visiting aircraft	Yes.

7	Remarks	Mandatory handling applies to all non-based aircraft over a MTOW of 6001 KG. All non-based arrivals above a MTOW of 6001 KG must report to the Main Apron or nominated handling agent apron unless by prior arrangement (Biggin Hill Ops 01959-578525). Portable water, toilet servicing, GPU, airstart and airstairs all available. Biggin Hill Ops – Channel 131.790 Biggin Hill Executive Handling Handling and associated ground equipment for all light aircraft and business aviation aircraft up to B737/A320 size, larger aircraft on request.

EGKB AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotels on the airport and in the vicinity.
2	Restaurants	Cafe, Bar. VIP and executive catering by arrangement
3	Transportation	Buses, taxis, car hire and limousines. Nearest railway stations: Bromley South and Orpington. Rail/Air link by shuttle bus.
4	Medical facilities	Limited first aid treatment.
5	Bank and Post Office	Biggin Hill Village 1.5 miles.
6	Tourist Office	-
7	Remarks	Passenger terminal plus two VIP lounges.

EGKB AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 RFFS Category 7 accepted under remission.
2	Rescue equipment	4 x 6x6 Major Foam Tender.
3	Capability for removal of disabled aircraft	Refer to Airport Operations Manager or FSM.
4	Remarks	-

EGKB AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical & Chemical De-icing.
2	Clearance priorities	Standard. See Airport Winter Operations Plan.
3	Remarks	Latest information from: Biggin Operations Tel: 01959-578525.

EGKB AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	MAIN APRON Surface: Tarmac and Concrete Some portions of the Main Apron have a slope of 2%. PCR 470/F/C/X/U SOUTH EAST APRON Surface: Concrete PCR 470/F/C/X/U
2	Taxiway width, surface and strength	Taxiway ALPHA: 15 M Surface: Asphalt. Between A1-A2: Concrete. PCR 296/F/C/X/U Taxiway BRAVO: 15 M Surface: Asphalt PCR 453/F/C/X/T Taxiway CHARLIE: 15 M Surface: Asphalt Engine run area width 35 M. PCR 296/F/C/X/U

VOR/DME 1.58°E (2027) 1.6°E (2026)	DET	120X 117.300 MHz	H24 Hours of operation for aerodrome purposes: Mon-Fri 0630-2300 (0530-2200); Sat, Sun and PH 0800-2200 (0700-2100).	511814.41N 0003550.19E	645 FT	VOR DOC: 20 NM/50,000 FT (35 NM/50,000 FT in Sector R288-028 and 45 NM/50,000 FT in Sector R248-288). DME DOC: 60 NM/50,000 FT.

EGKB AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Not available to aircraft unable to communicate with ATC.
b) Aerobatic manoeuvres and low flypasts are prohibited unless prior approval has been given by the aerodrome operator.
c) Microlight flying is prohibited at this airport.
d) Prior to use of this aerodrome, the terms and conditions are to be obtained from the aerodrome operator.
e) All international flights must provide a completed GAR (General Aviation Report) prior to arrival.
f) Biggin Hill Airport is PPR for all aircraft movements. PPR can be obtained directly by use of the booking form at www.bigginhillairport.com (General Aviation Tab) or at www.Bigginbooking.com. The booking form should be submitted a minimum of 30 minutes prior to ETD or ETA. The filing of a Flight Plan (FPL) complies with the requirement to obtain PPR.

g) All personnel must wear hi-visibility personal protective equipment whilst operating on the aprons.
h) Biggin Hill Airport does not permit cost sharing flights advertised through online “flight sharing” platforms. Flights suspected to be operated under this premise may be subject to operational restrictions and are expressly prohibited by the airport authority.
i) Winter Operations - Biggin Hill Airport adheres to a clean aircraft policy with regards to de-icing/anti-icing of aircraft.
j) Drone (UAV) operators requesting to operate within the Biggin Hill FRZ must gain permission through the Biggin Hill Airport Drone Authorisation portal: https://bigginhillairport.com/community/noise/drones/.

2 GROUND MOVEMENT

a) Caution reduced wing tip clearance between taxiing and parked aircraft on Main Apron. Marshalling guidance provided.
b) Aircraft taxiing from any ramp/apron must use minimum power until established on the taxiway centre-line. When calling for start, ramp position must be passed to ATC.
c) Due to the number of personnel and vehicles operating on the Main Apron, pilots are to operate at minimum taxiing speed when approaching or transiting this area.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) The only visual signals are light signals.
b) Biggin Hill is located on the North Downs with an aerodrome elevation of 584 FT AMSL and is often subjected to strong winds. Consequently, aircraft are likely to experience turbulence and windshear on landing and take-off on all runways.
c) Pilots of departing aircraft are warned of the presence of other aircraft joining the visual circuit from the ‘Deadside’. The joining aircraft will fly across the mid point of the runway in use at altitude of 1584 FT (1000 FT AAL) at 90° to the runway heading before turning left/ right onto the downwind leg. Pilots of high performance fast climbing aircraft should be particularly alert.
d) Obstacle marking and lighting: Control Tower, VDF Antenna, VOR/DME site, hangars and anemometer east of Runway 03 threshold. ILS glidepath and localizer sites, anemometer mast and Northern Terminal Hangar.
e) Aircraft under tow at night may not be displaying nav/anti-collision lights.
f) Sections of Taxiway Foxtrot exceed the maximum longitudinal slope requirements and therefore the sight distance requirements as per CAP 168, Chapter 3.
g) A section of the taxiway graded area to the north of Taxiway Foxtrot has an up slope of 5.8%.

5 HELICOPTER OPERATIONS

a) In order to avoid noise sensitive areas surrounding the aerodrome, helicopters must conform to normal fixed-wing joining, departure and circuit procedures unless otherwise instructed by ATC.
b) Pilots of helicopters should take particular note of a noise sensitive area on the northern aerodrome boundary prohibiting close right-base approaches for Runway 21, direct departures to the north from Runway 03 or West from the TLOF (F Taxiway).
c) Helicopter circuit training is not permitted at Biggin Hill.

6 USE OF RUNWAYS

a) The width at both ends of Runway 03/21, is twice that delineated by the associated edge lights due to extra pavement at one side.
b) Except where a public transport operator has a lower State authorised take-off minima, the Aerodrome Authority cannot approve departures in RVR conditions of less than 400 M.

7 TRAINING

a) Use of the aerodrome for training is subject to the following:

i. The aerodrome is not available for circuit and instrument approach training by non-Biggin Hill based aircraft of less than 3000 KG MTWA.
ii. The number of aircraft in the visual circuit will be determined by ATC, subject to the prevailing weather conditions and other commercial or corporate traffic.
iii. The aerodrome is not available to Student Pilots unless accompanied by an appropriately qualified pilot.
iv. A booking system exists for instrument training. The filing of a flight plan does not constitute a booking. Contact Biggin Hill ATC on +44 (0)1959-578522 for all instrument training bookings.
v. Circuit Training may be suspended during periods of high traffic density.

EGKB AD 2.21 NOISE ABATEMENT PROCEDURES

1 GENERAL

a) Every operator of aircraft using the airport shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in the area surrounding the airport.
b) Only those aircraft meeting ICAO Chapter 3 criteria or better will be accepted. Contact Flight Operations on +44 (0)1959-578500.
c) Pilots are requested to avoid the use of reverse thrust or reverse pitch above idle power settings on landing, consistent with the safe operation of the aircraft.

d) Due to the close proximity of residential areas, ground running of engines or Auxiliary Power Units (APU) shall be kept to a minimum consistent with operational requirements. At no time shall APUs be run for more than 30 minutes without Aerodrome Operator consent.
e) The use of the Noise Preferential Routings is supplementary to the noise abatement take-off techniques published by specific aircraft manufacturers.
f) The Noise Preferential Routings may at any time be departed from as necessary for safety reasons.

2 NOISE ABATEMENT PROCEDURES - IFR DEPARTURES

a) **Runway 21/03 IFR Departures**

i. London Biggin Hill Airport is located close to densely populated and largely residential areas. In order to support operating hours that include night time aircraft operations, compliance with NPRs is required and is enforced by a Noise Monitoring and Track Keeping System (NMTKS).
ii. Aircraft failing to comply with NPRs and/or noise limits may be subject to additional charges as set out in the London Biggin Hill Airport Schedule of Fees and Charges. As with other London airports, frequent or repeated noise and/or track violations may result in a permanent exclusion from the airport.
iii. Calibrated Noise Monitors are located approximately 1 KM from the threshold of each runway and lie directly under the approach and departure path. Additionally, a mobile noise monitor may be positioned anywhere from time to time deemed appropriate by the airport operator. Nominal departure track limits are programmed into the NMTKS along with minimum heights set at two points in the standard departure route.

b) **Runway 21 Departures**

i. On departure speed should be restricted to V2+25 KIAS and in any case no more than 185 KIAS, in accordance with the Standard Departure Route (SDR), until passing over BIG eastbound in order to achieve the best practical angle of climb whilst keeping thrust to the minimum required for an expeditious departure.
ii. Following rotation, runway track should be maintained accurately.
iii. On crossing the upwind end of Runway 21, an immediate right turn should be commenced to track 219° M in order to avoid residential housing located at Norheads Farm. In accordance with the SDR, a right turn should be commenced promptly at BIG 1 DME in order to route back over the airfield on track towards DET. Speed in excess of 185 KIAS will result in a radius of turn which exceeds the designated track limits and may therefore result in a track violation. In strong south/southwesterly winds, particular attention should be given to radius of turn.
iv. In order to safely maintain the relatively low speed mandated by this procedure and dependent upon aircraft type, consideration should be given to delaying flap retraction until passing BIG outbound at or above 2100 FT AMSL in order to ensure a sufficiently tight radius of turn is achievable.
v. The procedure is designed to prevent unnecessary overflight of the built up areas lying to the north of the airport. Pilots should pay particular attention to avoiding overflight of these areas. Achieving the correct radius of turn is therefore essential.
vi. Additionally, an altitude limit violation will occur if the noise monitor at Norheads Farm is overflown below 1000 FT AMSL (400 FT AAL) or the BIG is overflown below 2100 FT AMSL.

c) **Runway 03 Departures**

i. On departure speed should be restricted to V2+25 KIAS and in any case no more than 185 KIAS until at or above 2100 FT AMSL in order to achieve the best practical angle of climb whilst keeping thrust to the minimum required whilst at low level.
ii. Following rotation, runway track should be maintained accurately. Upon reaching BIG 1 DME aircraft should commence an immediate right turn to DET in accordance with the Standard Departure Route (SDR).
iii. In order to safely maintain the relatively low speeds required by this procedure and dependent upon aircraft type, consideration should be given to delaying flap retraction until at or above 2100 FT AMSL in order to ensure a sufficiently tight radius of turn is achieved.
iv. The procedure is designed to prevent unnecessary overflight of the built up areas lying to the north of the airport. Pilots should pay particular attention to avoiding overflight of these areas. Excessive speed on departure or a failure to commence a right turn immediately upon reaching BIG 1 DME will likely result in a track violation.
v. Additionally, a limit violation will occur if the noise monitor at Milking Lane Farm is overflown below 1000 FT AMSL (400 FT AAL) or 2100 FT AMSL is not achieved after 5 track miles.

d) **General Exclusion**

Pilots should note that none of these provisions will apply in any emergency. Commanders must place the safety of their aircraft ahead of published NPR requirements.

3 VFR NOISE ABATEMENT PROCEDURES

a) All VFR Noise Departure Turns are based from the ARP (Lat: 511951N Long: 0000157E).
b) London Biggin Hill Airport is located close to densely populated and largely residential areas. In order to support extended operating hours that include night time aircraft operations, compliance with NPRs is required and is enforced by a Noise Monitoring and Track Keeping System (NMTKS).
c) Aircraft failing to comply with NPRs and/or noise limits may be subject to additional charges as set out in the London Biggin Hill Airport Schedule of Fees and Charges. As with other London airports, frequent or repeated noise and/or track violations may result in a permanent exclusion from the airport.
d) Calibrated Noise Monitors are located approximately 1 KM from the threshold of each runway and lie directly under the approach and departure path. Additionally, a mobile noise monitor may be positioned anywhere from time to time deemed appropriate by the airport operator. Noise Sensitive Areas (NSAs) over Keston, Downe, Farnborough and Orpington are programmed into the NMTKS along with minimum heights set at each noise monitor.

e) **Runway 21 Departures**

i. All aircraft departing Runway 21 VFR are required to turn right, after passing the aerodrome boundary, to make good a track of 219° magnetic:

1. If safe to do so, aircraft departing to the west via Kenley should continue to 1 NM, before turning right and setting course, avoiding the villages of Woldingham and Warlingham;
2. If safe to do so, aircraft departing to the east or northeast via Sevenoaks or Swanley should continue to 2 NM before turning left and tracking to the southeast, remaining south and east of Tatsfield Village. A useful visual reference for the turn is to remain south of the Tatsfield golf course;
3. Once an aircraft has left the ATZ, it should not re-enter the ATZ without the appropriate ATC clearance. Aircraft intending to route to via Swanley should ensure that they arrange their flight in order to avoid the eastern limits of the ATZ whilst tracking northeast. CAUTION – there may be numerous aircraft joining from the east..

f) **Runway 03 Departures**

i. All Aircraft departing Runway 03 VFR are required to climb straight ahead until 1 NM:

1. Single Engined Piston Aircraft departing to the west via Kenley to make a left turn at 1 NM en-route to leave the ATZ;
2. Jet, Turbo-Prop and Twin-Engine Aircraft departing to the west via Kenley to turn Left not before 1 NM en-route to leave the ATZ;
3. Aircraft departing east or southeast via Sevenoaks or northeast via Swanley, to turn Right at 1 NM to leave the ATZ en-route. CAUTION – there may be numerous VFR aircraft joining from the east;
4. If safe to do so, aircraft departing to the north, continue en-route but avoiding overflight of the Noise Sensitive Areas of Orpington and Chelsfield. Expect an early frequency change to the next agency, due to the close proximity of London Heathrow and London City CTAs;
5. If safe to do so, all pilots must in all cases avoid overflight of the residential areas to the north and east especially Keston, Farnborough, Orpington and Downe.

g) **Visual Circuits**

i. All circuits at London Biggin Hill Airport are conducted to the west of the aerodrome (Right Hand - Runway 21, Left Hand - Runway 03). Overflight of the following Noise Sensitive Areas should be avoided, if safe to do so, unless necessary to fulfil an ATC instruction such as to extend downwind for spacing, Keston Village, The Leavesdon Estate and Leaves Green. Aircraft with an approach speed category of A or B that are unable to comply with these requirements should not plan to make use of London Biggin Hill Airport.
ii. If safe to do so, aircraft joining the visual circuit from the east or southeast should avoid overflight of the Noise Sensitive Areas of Downe Village and Biggin Hill Village.

h) **Noise Sensitive Areas**

i. Safety always takes priority over NSAs. The NMTKS will track all aircraft arriving at and departing from London Biggin Hill Airport. Aircraft entering a Noise Sensitive Area will automatically become the subject of a track violation report which will be considered by the airport Noise Abatement and Safety Review Board (SANARB) for consideration of a penalty charge. All penalty charges levied are donated to local good causes. In the case of repeated violations of wither noise or track limits, permanent exclusion from the airport may result.

EGKB AD 2.22 FLIGHT PROCEDURES

1 CIRCUIT PROCEDURES

a) Aircraft taking off, 'going around' or making 'touch and go' landings are to remain at or below 500 FT QFE until the upwind end of the runway in use has been passed, when a left or right turn (as appropriate) should be initiated. Aircraft joining the circuit for landing are to fly across the mid-point of the runway in use at 1000 FT QFE at 90° to the runway heading, a left or right turn (as appropriate) should be made onto the downwind leg.
b) Variable circuits - LH on Runway 03, RH on Runway 21. Circuit heights are 1000 FT QFE (1600 FT QNH) at all times.

2 STANDARD DEPARTURE ROUTES - VIA ATS ROUTE NETWORK

Departure to	Designator	Via	Route
North	Brookmans Park 2 (BPK 2)	L10/N601	DET - N601 - BPK
Northeast	DAGGA 2 (Note 5)	M604	DET - M604 - DAGGA
Southeast	Dover 2 (DVR 2)	L9/L10/Q70	DET - L6 - DVR/DET - Q70 - VABIK
South & southwest	Lydd 2 (LYD 2)	M189	DET - LYD
West	SAXBI 2	N27	DET - N601 - BPK - SAXBI

Note 1: *Departures from Runway 21, follow Noise Abatement Procedure turning right to pass overhead BIG VOR at 2400 FT ALT.*

Note 2: *Departures from Runway 03, after noise abatement, turn right to intercept DET VOR RDL 275° to DET.*

Note 3: *When established on DET VOR RDL 275°, not above 2500 FT ALT until 9 DME DET, then to 4 DME DET at 4000 FT ALT.*

Note 4: *For positioning flights to London Luton/London Stansted, follow BPK 2 SDR to DET then join DET 2A, at altitude as directed by ATC.*

Note 5: *Cross DET VOR/DME fix 017°/7 NM at 5000 FT ALT.*

3 OUTBOUND IFR TRAFFIC OUTSIDE CONTROLLED AIRSPACE

IFR traffic departing from Biggin Hill will be co-ordinated with 'Thames Director'.

Note 1: *Caution -Kenley Aerodrome and associated glider flying.*

Note 2: *IFR Training Flights intending to utilize the services of 'Thames Director' are to obtain prior approval from Biggin Hill ATC, Tel: 01959-578525.*

4 PROCEDURES FOR INBOUND AIRCRAFT

a) **Standard Arrival Routes Biggin Hill**

i. The standard routes for inbound aircraft are detailed in the Standard Arrival Routes (STAR) shown at AD 2-EGLC-7-STAR Charts (and associated database coding tables).

b) **RNAV1 IFR Arrivals from the ATS En-Route Structure via JACKO or GODLU**

i. Runway 21: Aircraft and crews equipped and approved for RNAV1 operations can expect to be cleared to fly the RNAV1 Transition for Runway 21 as detailed in AD 2-EGKB-7-1 (and its associated data base coding table) and then complete an appropriate approach procedure for Runway 21.

ii. Runway 03: Aircraft and crews equipped and approved for RNAV1 operations can expect to be cleared to fly the RNAV1 Transition for Runway 21 as detailed in AD 2-EGKB-7-1 (and its associated database coding table) followed by an instrument approach to Runway 21 and then circle to land on Runway 03 – this is subject to ATC clearance, weather minima and traffic conditions. Please note Visual Manoeuvring (Circling) is conducted west of the aerodrome.

c) **Non-RNAV1 IFR Arrivals from the ATS En-Route Structure via JACKO or GODLU**

i. After passing JACKO or GODLU, non-RNAV1 arrivals will be vectored by ATC for arrival at Biggin Hill prior to transfer to Biggin Hill for the appropriate approach procedure. In the event of RCF the procedures detailed in EGKB AD 2.22 paragraph 6 are to be followed.

5 VFR/IFR FLIGHTS

a) **Traffic Services Outside Controlled Airspace**

i. VFR arrivals, departures and overflights:

Pilots should state the type of service required. If no specific service is requested by the pilot, these flights will be provided with a Basic Service by default.

ii. IFR arrivals following an Instrument Approach and departures via Standard Departure Routes:

Unless otherwise requested by the pilot, these flights will be provided with a Procedural Service by default.

iii. IFR arrivals and departures:

Pilots of inbound flights intending to commence a visual approach and departing flights on routes other than standard departure routes should state the type of service required. If no specific service is requested, a Basic Service will be provided.

iv. IFR overflights:

Pilots of these flights should state the type of service required (Basic Service or Procedural Service).

b) **VFR Arrival Procedures**

All inbound aircraft should comply with ATC instructions where possible.

i. VFR Arrivals from the East:

Pilots should make first contact with Biggin Approach no later than 5 NM from Biggin Hill. Unless ATC issue alternative joining instructions, all aircraft should route and report 3 NM due east of Biggin Hill Airport (*Note 1*) descending to circuit height of 1000 FT QFE (altitude 1600 FT QNH) (*Note 2*), route over the mid-point of Runway 21/03 and turn downwind left-hand or right-hand as required.

Note 1: *Due to Runway 03 departure procedures, pilots should at all times avoid routing towards the north-eastern section of the Biggin Hill ATZ. Pilots should not turn towards the Biggin Hill ATZ until south of VRP M25 Junction 4 (remaining at least 5 NM away from Biggin Hill) or as directed by Biggin Hill ATC.*

Note 2: *Pilots should arrange their flight to be level at circuit height no later than 3 NM from Biggin Hill unless there is conflicting traffic.* ***Caution****: aircraft leaving the Biggin Hill ATZ between altitude 2000-2400 FT QNH eastbound.*

ii. VFR Arrivals from the North, West and South:

Pilots should make first contact with Biggin Approach at the earliest opportunity, in all cases, no later than 5 NM from Biggin Hill Airport. All inbound aircraft shall route as directed by Biggin Hill ATC and be level at circuit height of 1000 FT QFE (altitude 1600 FT QNH) no later than 3 NM from Biggin Hill unless there is conflicting traffic.

Caution: Aircraft joining from the west should avoid overflying Kenley Gliding site.

c) Traffic Information is derived from pilots reports and Aerodrome Traffic Monitor (ATM) data.

6 RADIO COMMUNICATION FAILURE PROCEDURES

In the event of complete Radio Communication Failure (RCF) in an aircraft, the pilot is to adopt the appropriate procedure in ENR 1.1 paragraph 3.4 except where described below:

a) **Inbound RNAV 1 Aircraft via JACKO or GODLU**

i. **Via JACKO**

1. **RCF occurring prior to arrival at JACKO**. The pilot is to adopt the RCF procedures detailed in ENR 1.1 paragraph 3.4.2.2.4 squawking Mode A 7600 when the RCF is detected. On leaving the JACKO hold, follow the routing JACKO – BABKU direct RAVSA – GAPGI – ATPEV – LCE07 – OSVEV, complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.
2. **RCF occurring on the sequencing leg after JACKO**. Squawk Mode A 7600. Fly at the last assigned level to the end of the sequencing leg at LCE23, route RAVSA – GAPGI – ATPEV – LCE07 – OSVEV, complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.
3. **RCF occurring having been cleared off the sequencing leg**. Squawk Mode A 7600. Fly direct to RAVSA – GAPGI – ATPEV – LCE07 – OSVEV complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.

ii. **Via GODLU**

1. **RCF occurring prior to arrival at GODLU**. The pilot is to adopt the RCF procedures detailed in ENR 1.1 paragraph 3.4.2.2.4 squawking Mode A 7600 when the RCF is detected. On leaving the GODLU hold, follow the routing GODLU – ELMIV direct RAVSA – GAPGI – ATPEV – LCE07 – OSVEV, complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.
2. **RCF occurring on the sequencing leg after GODLU**. Squawk Mode A 7600. Fly at the last assigned level to the end of the sequencing leg at LCE13, route RAVSA – GAPGI – ATPEV – LCE07 – OSVEV, complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.
3. **RCF occurring having been cleared off the sequencing leg**. Squawk Mode A 7600. Fly direct to RAVSA – GAPGI – ATPEV – LCE07 – OSVEV complying with the vertical profile shown on the chart, then route to ALKIN and continue in accordance with the standard procedures from ALKIN.

b) **Inbound Non-RNAV 1 Aircraft via JACKO or GODLU**

In the event of complete (RCF) in an aircraft, the pilot is to adopt the appropriate procedure described at ENR 1.1 paragraph 3.4.2.2.4 until reaching JACKO or GODLU. When ready to commence an arrival procedure, the pilot is to follow the procedure as detailed below.

i. **Via JACKO**.

Route via JACKO (FL 80) – TRIPO (6000 FT) – SPEAR (5000 FT) – ALKIN (3000 FT) and continue in accordance with the standard procedures from ALKIN.

ii. **Via GODLU**.

Route via GODLU (FL 100) – DET (4000 FT) – ALKIN (3000 FT) and continue in accordance with the standard procedures from ALKIN.

Note: *Due to the proximity of the London Control Zone aircraft shall not track further west than the BIG 350R, where the aircraft shall make a left turn direct to ALKIN and continue in accordance with the standard procedures from ALKIN.*

c) **Outbound Aircraft**

i. For the purposes of RCF, the climb to flight planned level should be commenced after the last position shown in the standard departure routes where an altitude or flight level is specified.

7 INSTRUMENT APPROACH PROCEDURES (IAP)

Instrument Approach Procedures for this aerodrome are established outside controlled airspace. See ENR 1.5.

8 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero.ais.

EGKB AD 2.23 ADDITIONAL INFORMATION

a) Mode S Barometric Pressure Setting Data

London Terminal Control has the ability to downlink Mode S Barometric Pressure Setting (BPS) data. Therefore, if the downlinked pressure data is at variance with the BPS expected by Air Traffic Control, pilots can expect additional challenge. When Air Traffic Control pass a reminder of the appropriate BPS, it is anticipated that the aircrew will cross check the altimeter settings and confirm set.

BIGGIN HILL

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2100** in the sector defined by the lateral limits; 512038N 0000835W - 512207N 0000314E - 511829N 0000545E thence clockwise by an arc of a circle radius 4NM centred on 511651N 0000005W to 511548N 0000613W - 512038N 0000835W.

b) **2000** in the sector defined by the lateral limits; 513022N 0001000W thence clockwise by an arc of a circle radius 3NM centred on 513016N 0000512W to 513040N 0000026W - 512556N 0000036E - 512207N 0000314E - 512038N 0000835W - 512426N 0001026W - 513022N 0001000W.

c) **2000** in the sector defined by the lateral limits; 511818N 0002650W - 512038N 0000835W - 511548N 0000613W thence anticlockwise by an arc of a circle radius 4NM centred on 511651N 0000005W to 511829N 0000545E - 512207N 0000314E - 512606N 0003549E - 511814N 0003550E - 510853N 0001125W - 511056N 0002519W - 511818N 0002650W, except within 3NM radius circle enclosing the Wrotham Mast (511914N 0001714E) where the minimum altitude is **2300**.

d) **1900** in the sector defined by the lateral limits; a circle radius 3NM centred on 513119N 0001542W.

e) **1800** in the sector defined by the lateral limits; 513723N 0003108W - 514239N 0003533E - 512606N 0003549E - 512207N 0000314E - 512556N 0000036E - 513040N 0000026W thence anticlockwise by an arc of a circle radius 3NM centred on 513016N 0000512W to 513022N 0001000W - 512426N 0001026W - 512038N 0000835W - 511818N 0002650W - 513723N 0003108W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate final approach aid. If not possible proceed at not above **2300**, to join the **ALKIN** holding pattern†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to join the ALKIN holding pattern†.

†In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. 913FT vertical separation approved against the Crystal Palace mast to meet ATS operational requirements.
7. The ATC Surveillance service is provided by Primary and/or Secondary Radar equipment.
8. **Thls chart may only be used for cross-checkIng of altItudes assIgned when In recelpt of an ATC Surveillance servIce.**

EGBB AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Taxiing guidance signs: Taxi-holding position; Guide lines at apron. Terminal Apron (Stands 1-86). All aircraft stands are laid out for nose-in/push-back; nose-wheel guidelines are provided and marshalling assistance is available, if required, on request through ATC GMC. Stands 15, 16, 40, 41 L/R/C, 42 L/R/C, 54 L/R/C - 57L/R/C, 58 and 59 have directional information provided by a Stand Entry Guidance (SEG). Stands 1-14, 20-25, 60, 70-77, 80-86 will be under marshaller instructions. All Stands except 75-77 are fitted with a fixed electrical ground power unit. Pilots must not enter an aircraft stand unless SEG is activated and the correct aircraft type is displayed, or the marshaller has signalled clearance to proceed. In the event of there being no activated SEG displayed upon approach to the stand, flight crews must hold position on the taxiway and advise GMC of the non-activation of the SEG. Aircrew must not attempt to self-park if the SEG is not activated. Aircrew are to note that all SEG systems are activated by their ground handling agent. The activation of SEG systems should indicate that a safety check of the stands has been made by the handling agent prior to the arrival of the aircraft. Elmdon Apron (Stands 501-506 and 601) will be under marshaller instructions. Pilots of light aircraft not using the full stand facilities should await marshaller instructions before proceeding onto the stands to park.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 15/33: Designation, runway edge, threshold, centre-line, TDZ. Taxiway light(s): Green centre-line lighting (15 M spacing) plus blue edge on curves and red stop bars. No green centre-line on Taxiway J and Taxiway L.
3	Stop bars and runway guard lights (if any)	No stop bar at J1. Stop bars at runway entrance points are in operation H24. Stop bars at T4 are only omnidirectional.
4	Other runway protection measures	-

EGBB AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Unless by prior agreement aircraft arriving or departing on international flights must clear Customs on Stands 1-86.
b) Slots for all commercial air transport movements must be cleared with Airport Co-ordination Ltd: SITA: LONACXH; e-mail: lonacxh@acl-uk.org; Tel: 020-8634 0636, Fax: 020-8564 0691.
c) Operators are required to have made arrangements for ground handling prior to arrival. Unless in an emergency, inbound diversions will only be accepted subject to stand availability. However operators should note that off-loading and aircraft turnaround may be subject to significant delays.
d) The wearing of high visibility clothing by all employed on the apron including flight crew and attendants is mandatory. It is the responsibility of the aircraft captain to ensure passengers are escorted by aircrew or ground handling staff at all times when on foot in external areas of the Aerodrome.
e) Aircraft not able to communicate with ATC by radio will not be accepted.
f) FEGP must be used whenever available and serviceable. Use of aircraft Auxiliary Power Units (APUs), and diesel Ground Power Units is subject to strict controls as set out in published airport regulations. APUs should be shut down as soon as practicable following arrival and not restarted until 30 minutes prior to departure.
g) It is a requirement that every airline using Birmingham Airport must have local orders compatible with Birmingham Emergency Orders. Airlines and General Aviation operators should also note that it is their responsibility to recover their aircraft in cases of disabled aircraft and aircraft wreckage. They must have appropriate arrangements in place, and confirmed in writing to Birmingham Airport, before commencing flying operations into the aerodrome. Birmingham Airport will act as coordinating body throughout the recovery operation and has only limited equipment which may be used to assist in the recovery of aircraft.
h) Birmingham operates a standard taxi time of 15 minutes. Operators must ensure all flight plans filed include a taxi time of 15 minutes.

2 GROUND MOVEMENT

a) Clearance Delivery

i. ATC Clearances may be obtained by Voice RTF or Datalink Departure Clearance Service (DCL). Pilots should not request their clearance or SID information earlier than EOBT-19 minutes.
ii. Voice RTF

1. Pilots of departing aircraft are to call Birmingham Delivery on 121.930 for ATC clearance stating aircraft type, stand number and code letter of latest ATIS received. All operators are to report ready for start with Birmingham Delivery and then proceed as directed by ATC.

iii. Data link Departure Clearance (DCL)

1. Pre-departure clearance by datalink is available at Birmingham for suitably equipped aircraft. Details of the DCL service may be obtained from ATC Operations on +44 (0)121-767 1235.
2. DCL service is available from EOBT-19 minutes.
3. DCL Clearances will not be issued if requested earlier than EOBT-19 minutes. If requested early, a standby message will be delivered and the clearance will automatically be delivered at EOBT-19 minutes.
4. Successful clearances must be ACCEPTED within 10 minutes of receipt or a 'revert to voice' message will be received.
5. If any data errors are detected by the system a 'revert to voice' message will be received.
6. If the attempt to obtain a clearance is unsuccessful the aircraft should revert to voice RTF.
7. Departing aircraft must report their aircraft type, stand number and code letter of latest ATIS received. All operators are to report ready for start with Birmingham Delivery and then proceed as directed by ATC.

b) Birmingham Airport is equipped with an Advanced Surface Movement Radar utilising Mode-S.

i. Aircraft operators intending to use Birmingham Airport shall ensure that Mode-S transponders are able to operate when the aircraft is on the ground.
ii. Flight crew shall:

1. Select AUTO mode and the assigned Mode-A code.
2. If AUTO mode is not available Select ON (e.g. XPNDR) and assigned Mode-A code:

(aa) From the request for push back or taxi whichever is earlier;

(bb) After landing, continuously, until the aircraft is fully parked on stand.

3. When fully parked on stand select STBY.

iii. Whenever the aircraft is capable of reporting Aircraft Identification (i.e. call sign used in flight), the Aircraft's Identification should also be entered from the request for push back or taxi whichever is earlier (through the FMS or the Transponder Control Panel). Flight Crew must use the ICAO defined format for entry of the Aircraft Identification.
iv. To ensure that the performance of systems based on SSR frequencies (including airborne TCAS units and SSR radars) is not compromised; TCAS should not be selected before approaching the holding point. It should then be deselected after vacating the runway.

Aircraft taxiing without flight plan should select Mode A code 2000.

c) All operators requesting tow are to contact Birmingham Ground on 121.805.
d) Taxiing with engine(s) shut down: The Airport Company will, where possible, facilitate operators wishing to taxi to or from the terminal with less than all engines running. Operators that would like to undertake taxiing with less than all engines operating should in the first instance contact the Airfield Operations Manager, with details of the particular aircraft types involved and likely schedule times.
e) Elmdon Apron:

i. Marshalling is mandatory for all aircraft parking on the Elmdon Apron;
ii. Pilots are advised that parking on the Elmdon apron is under marshaller guidance only. Care should be exercised due to the proximity of other aircraft when manoeuvring. Code E aircraft will be provided with follow-me guidance when entering Taxiway Foxtrot due to reduced main gear wheel to paved edge clearance on the bend.
iii. pilots are reminded of the need to maintain unobstructed access to the hangars at all times.
iv. Ground handler must be present on all aircraft start-up on the Elmdon Apron.

f) Due to restrictions, Taxiways Tango, Uniform and Stands 81-86 inclusive may not be used during the period Mon-Sat 2300-0700 (2200-0600), Sun 2300-0800 (2200-0700); except in extenuating circumstances as defined in the night flying policy.
g) Aircraft commanders are asked to use minimum power settings when manoeuvring.
h) Self-manoeuvring on Terminal Apron Stands is prohibited at all times unless approved by Airfield Operations.
i) Taxiway Restrictions:

i. Follow ATC instructions to vacate the runway and taxi to stand. No aircraft is to proceed beyond C2 / E2 / S3 (Runway 15 Arrivals) or A6 (Runway 33 Arrivals) without clearance from ATC.

j) A380 Aircraft Operations:

i. Operators of A380 aircraft may designate Birmingham as a nominated diversionary aerodrome subject to prior agreement with the Head of Airfield Operations Tel +44 (0)121-767 7384 and assessment of facilities at Birmingham by the Airline. The use of Birmingham as an alternate for A380 operations is also subject to UK CAA approval on an individual airline basis.
ii. Maximum of 3 A380s can be handled at any time (subject to stand availability).
iii. Follow-me may be requested via ATC if required.
iv. Departing aircraft must use the CAT III runway holds at all times, irrespective of weather conditions.
v. Diverting A380 aircraft will be provided with RFF Category 9 in accordance with UK CAA CAP 168 Chapter 8.

3 CAT II/III OPERATIONS

a) Runways 15 and 33, subject to serviceability of the required facilities, are suitable for Category II/III operations by operators whose minima have been accepted by the Civil Aviation Authority.
b) During Category II/III operations, special ATC procedures (ATC Low Visibility Procedures) will be applied. Pilots will be informed by ATIS broadcast or by RTF when these procedures are in operation.

c) Departing aircraft: ATC will require departing aircraft to use the Category II/III holding points located at A2, AL1 and S2 and the Category I/II/III holding points located at E1 and F1 as appropriate.

Arriving aircraft: Pilots should delay the call 'Runway vacated' until the aircraft is clear of the amber and green coded section of the taxiway lead-off lights.

d) Arriving aircraft should note that all appropriate runway exits are illuminated. Pilots should select the first convenient exit unless advised by ATC

4 WARNINGS

a) Taxiway Delta between D4 and D5 is restricted to aircraft with a maximum wingspan of 42 M. Aircraft with a wingspan exceeding 42 M will be routed via Taxiway E.
b) Pilots of long-wheelbase aircraft such as B777-300 should exercise caution when negotiating taxiway curves and intersections as main-gear to pavement edge clearance may be limited.
c) Due to runway orientation relative to prevailing winds, pilots should anticipate crosswinds and may experience building induced turbulence and wind shear on aerodrome in strong winds.
d) Pilots are warned that there is a possibility of Pigeons crossing the runway up to 100 FT AGL. Bird dispersal including the use of pyrotechnics in operation H24.
e) Pilots are warned that unauthorised ground based laser lights have been directed towards aircraft in the vicinity of the airfield. All incidents should be reported immediately via the Tower to the Airport Authority.
f) Operators should note that Birmingham Airport is unable to accept A340-600 aircraft due to limitation on taxiway curves.
g) Aircraft requiring to back-track along the runway must be capable of turning within the runway width of 46 M.
h) Visual/light signals from ATC are not available.
i) The Alpha Loop taxiway adjacent to the Runway 15 threshold is authorised for use by aircraft of Code A-C inclusive only.
j) Pilots are warned that when the runway surface condition is broadcast as wet, standing water could be encountered on the runway edge between Taxiways Foxtrot and Bravo.
k) Airlines should be aware of the increased risk of insect nesting during the spring and summer months. During this time, the use of pitot tube covers should be considered.
l) Pilots may experience localiser deviations due to Code D and above aircraft vacating at the end of the runway.
m) Pilots should be aware that autonomous equipment may be operating on the airfield.
n) Birmingham Airport is unable to accept Group 1-3 (MTOW 2 tonnes and under) fixed-wing aircraft. Group 1-3 fixed-wing aircraft declaring an emergency are exempt of this restriction.

5 HELICOPTER OPERATIONS

a) Helicopters to arrive and depart as instructed by ATC. All helicopters should expect to land on and depart from the main runway.

6 USE OF RUNWAYS

a) Preferential Runway.

Runway 33 will be selected as the preferred runway for departures and arrivals when the runway surface is dry and the mean surface wind speed as displayed from Runway 33 anemometer site is 5 KT or less. Aircraft requiring the use of Runway 15 must advise ATC and state that is for operational reasons.

7 TRAINING

a) Use of the aerodrome for training purposes is subject to the approval of Birmingham Airport Limited and the following conditions:

i. Training aircraft must climb straight ahead to 1000 FT QFE before turning, unless otherwise instructed by ATC;
ii. Aircraft above 5700 KG MTWA taking off from Runway 15 must climb straight ahead to 1.5 NM DME I BIR or 500 FT QFE whichever is later then turn as instructed by ATC;
iii. Training flights are restricted to commercial based operators (Easyjet, Jet2, Ryanair and TUI), NPAS, Air Ambulance (Helimed) and RAF Brize Norton only;
iv. Jet aircraft above 5700 KG require prior approval; contact: 0121-767 1210.

b) **Circuits**

i. Circuits by jet aircraft of more than 5700 KG MTWA on training flights will be carried out at 2500 FT QNH. Descent below this altitude should not take place until abeam the airfield on the downwind leg usually:

Runway 33 – right hand circuits;

Runway 15 – left hand circuits.

ii. Direction may be varied for environmental reasons.

c) **Procedural Instrument Training**

i. All procedural instrument training for non-turbo-jet aircraft of 5700 KG or less will require approval from ATC and is subject to prevailing traffic.

8 ROUND ROBIN FLIGHTS

a) Operators wishing to undertake round robin flights are required to contact ATC on 0121-767 1235 prior to requesting flight clearance to confirm that the intended flight routing matches the flight plan submitted. Operators wishing to undertake round robin flights who do not comply with this requirement will not receive flight clearance and pushback until the routing has been confirmed.

EGBB AD 2.21 NOISE ABATEMENT PROCEDURES

1 NOISE

a) Noise Preferential Routeings and Procedures - all aircraft inbound or outbound from this aerodrome are required to conform to the following procedures; notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

2 GENERAL

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the aerodrome.
b) Unless on radar vectors, aircraft shall avoid the congested areas of Hampton-in-Arden and Balsall Common to the southeast of the aerodrome and Dorridge, Knowle and Hockley Heath to the southwest of the aerodrome.

3 TAKE-OFF AND MISSED APPROACHES

a) Every jet aircraft using the aerodrome shall, after take-off or 'go-around' attain as soon as safety permits, a rate of climb of at least 500 FT per minute at power settings which will ensure progressively decreasing noise levels at points under the flight path.

4 ILS APPROACHES

a) Unless otherwise instructed by ATC, aircraft using the ILS in IMC or VMC shall not descend below 2000 FT QNH before intercepting the glidepath nor fly below the glidepath thereafter. An aircraft approaching without assistance from ILS or radar shall follow a descent path which will not result in its being at any time lower than the approach path which would be followed by an aircraft using the ILS glidepath.

5 CONTINUOUS DESCENT APPROACHES

a) Turbo-jet and turbo-prop aircraft are expected to apply continuous descent, low power, low drag approach techniques at all times.
b) Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a low power, low drag, continuous descent approach profile. ATC will provide estimated track distance to touchdown to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the glidepath at the appropriate height for the distance without level flight.
c) To facilitate these techniques aircraft should be flown no faster than 250 KT from the Speed Limiting Points and below FL 100 and 250 KT-210 KT during the intermediate approach phase. Thereafter speed should be managed so as to achieve a continuous descent using as little power or drag as possible. ATC may impose speed control if required for separation purposes. ATC will impose a speed of 180 KT or less inside 10 DME I-BM/I-BIR.
d) CDAs will commence from ALT 6000 FT QNH.
e) ATC will provide regular range checks. Pilots who require additional track mileage to facilitate a successful CDA should inform ATC as soon as the requirement is apparent.

6 VISUAL CIRCUITS APPROACHES – GENERAL

a) **Propeller driven aircraft MTWA 5700 KG or less**

i. For aircraft in this category, the minimum height for joining the final approach track shall be 1000 FT QFE for all approaches.

b) **All aircraft except those excluded in paragraph 6 a**

i. All aircraft carrying out visual circuits/approaches to Runways 33 and 15 shall not, unless instructed by ATC, descend below 2500 FT QNH (2175 FT QFE) on the downwind legs until they are abeam the aerodrome, after which a continuous rate is to be maintained.
ii. Aircraft must not join the final approach track to any runway at a height of less than 1825 FT QNH (1500 FT QFE), except when carrying out a right hand visual circuit to Runway 33 when the minimum height for joining the final approach track will be 1225 FT QNH (900 FT QFE).
iii. To minimise noise disturbance to congested urban areas adjacent to the aerodrome, base turns to visual circuits to Runway 15 and 33 are shown in the map at AD 2-EGBB-4-1. These should be flown whenever possible.
iv. To minimise disturbance in areas adjacent to the aerodrome, captains are requested to avoid the use of reverse thrust after landing, consistent with safe operation of the aircraft, especially between 2300-0700 (2200-0600).

7 NOISE PREFERENTIAL ROUTINGS

a) The Noise Preferential Routings given below are compatible with ATC requirements and shall apply in both VMC and IMC. The tracks are to be flown by all departing jet aircraft and by all other aircraft with a maximum certified weight exceeding 5700 KG unless otherwise

instructed by ATC or unless deviations are required in the interests of safety. The use of the route is supplementary to noise abatement take-off techniques. After take-off, pilots should ensure that they are at a minimum height of 500 FT QFE before initiating any turn. The obligations of NPRs for Runway 33 cease when the aircraft is at an altitude of 3000 FT or above. The obligations of NPRs for Runway 15 northbound departures cease when the aircraft is at an altitude of 3000 FT or above. The obligations of NPRs for Runway 15 southbound departures (including COWLY, CPT, DTY) cease when the aircraft is at an altitude of 4000 FT or above.

i. Take-off – Runway 15:

Climb straight ahead to 1.5 NM DME I BIR or 500 FT QFE whichever is later then:

Take-off Runway	Routing	Procedure
15	Left turn to a track of less than 060°	Turn left as instructed by ATC
	Left turn to a track of 060° or greater	At 2 DME I-BIR turn left as instructed by ATC
	Right turn out (non-MOSUN/LUXTO)	At 4 DME I-BIR turn right as instructed by ATC
	MOSUN/LUXTO	At 2 DME I-BIR track 164° to 4 DME I-BIR
	Unable RNAV	At 2 DME I-BIR track 164° to 4 DME I-BIR

ii. Take-off – Runway 15 Aerodrome DME Out of Service:

Climb straight ahead to 4.5 NM DME HON or 500 FT QFE whichever is later then:

Take-off Runway	Routing	Procedure
15	Left turn to a track of less than 060°	Turn left as instructed by ATC
	Left turn to a track of 060° or greater	At 1.5 DME HON turn left as instructed by ATC
	Right turn out (non-MOSUN/LUXTO)	At 1.5 DME HON turn right as instructed by ATC
	MOSUN/LUXTO	Track 164° to 2 DME HON
	Unable RNAV	Track 164° to 2 DME HON

iii. Take-off – Runway 33:

Climb straight ahead to 2 NM DME I BM or 500 FT QFE whichever is later. Then either

Take-off Runway	Routing	Procedure
33	Left or right turn out°	At 2 NM DME I BM turn as instructed by ATC

iv. Take-off – Runway 33 Aerodrome DME out of service:

Climb straight ahead to 9 NM DME HON or 500 FT QFE whichever is later. Then either:

Take-off Runway	Routing	Procedure
33	Left or right turn out	At 9 NM DME HON turn as instructed by ATC

Note 1: *Directions of turn onto course shall be such that as far as possible the surrounding built-up areas will be avoided.*

b) Except in emergency and for safety reasons no aircraft movements or activities involving the running of aircraft engines shall take place on or along the first 100 M of Runway 15, Taxiway A or Taxiway B north of Hold A6 between the hours of 2300-0700 (2200-0600), unless the aircraft landed at the Airport before 2300 (2200) and is proceeding to the aprons. Pilots should note that in such circumstances Runway 15 TORA/ASDA/TODA will be reduced by 150 M.

8 AUXILIARY POWER UNITS (APU)

a) Except for stands not equipped with a serviceable Fixed Electrical Ground Power Unit, APU must be shut down immediately on arrival on stand and not restarted more than 30 minutes prior to departure without permission from the aerodrome operator.
b) Except in an emergency, no aircraft activities involving the running of APU's shall take place on the aprons between the hours of 2300-0600 (2200-0500), unless such activities are necessary in the case of an aircraft which has landed at the aerodrome before 2330 (2230).

9 NIGHT NOISE RESTRICTIONS/ALLOCATIONS

a) Birmingham Airport operates a noise policy restricting the operation of certain types of aircraft during the night period of 2330-0600 (2230-0500). Full details are available from Airport Co-ordination Limited or the Airfield Duty Manager.
b) Aircraft with a noise classification of 93 EPNdB or more are not permitted to be scheduled during the night period. Aircraft with a noise classification of 93 EPNdB or more may be permitted to operate in exceptional circumstances subject to prior approval by the Airfield Duty Manager.
c) All movements recording a level above 83 dB(A) Lmax on departure at the noise monitors located 6.5 KM from ‘start of roll’ during the night period will be subject to a runway surcharge.
d) Records of night infringements are available on request from the Birmingham Airport Sustainability Team.

10 RESTRICTIONS

a) Restrictions are imposed on the ground running of engines in the interests of noise abatement. All engine ground runs are to be approved by the ACC/ADM (0121-767 7139).

11 NOISE ABATEMENT PROCEDURES FOR HELICOPTERS

a) To minimise noise disturbance to urban areas adjacent to the airport, helicopters should, except in the case of an emergency, avoid overflying the noise sensitive area at less than 500 FT AAL. This area extends between 230° and 290° from the Western end of stand 506, to a distance of 0.5 NM

EGBB AD 2.22 FLIGHT PROCEDURES

1 RADIO COMMUNICATION FAILURE PROCEDURES

In the event of complete radio failure in an aircraft the pilot is to adopt the appropriate procedures notified at ENR 1.1.3, with the exception described below.

a) Inbound Aircraft

i. When complete communications failure occurs in the aircraft before ETA, or before EAT when this has been received and acknowledged, the aircraft will:

1. fly to the appropriate holding point (GROVE or CHASE);
2. hold at the last assigned level until the last acknowledged ETA plus 10 minutes or EAT when this has been given;
3. descend to the lowest whole flight level which gives at least 1000 FT separation from the Transition Altitude. When level transit from the appropriate holding point (GROVE or CHASE) to the BHX holding point;
4. when established in the BHX hold commence descent for landing in accordance with the approach procedure for the runway-in-use and effect a landing within 30 minutes (or later if able to approach and land visually).

ii. If complete radio communications failure occurs after an aircraft has reported to ATC on reaching the holding point, the aircraft will:

1. hold at the last assigned level at GROVE or CHASE until:

(aa) ATA over the holding point plus 10 minutes or 10 minutes after the last acknowledged communication with ATC, whichever is the later; or

(bb) EAT when this has been received and acknowledged;

2. descend to the lowest whole flight level which gives at least 1000 FT separation from the Transition Altitude. When level transit from the appropriate holding point (GROVE or CHASE) to the BHX holding point;
3. when established in the BHX hold commence descent for landing in accordance with the approach procedure for the runway-in-use and effect a landing within 30 minutes (or later if able to approach and land visually).

iii. When complete radio communication failure occurs during intermediate or final approach under radar control the procedures to be followed are detailed at AD 2-EGBB-5-1.

iv. When complete radio communication failure occurs in the aircraft following a missed approach the aircraft will:

1. fly the appropriate missed approach procedure to BHX NDB(L);
2. complete at least one holding pattern at 2500 FT;
3. then commence descent for landing in accordance with the approach procedure for the runway-in-use and effect a landing within 30 minutes (or later if able to approach and land visually)

v. The routes and levels to be used when leaving the Zone or Holding Area in accordance with the procedures given at ENR 1.1.3 are shown in the table below:

Position at time of decision	Route
BHX NDB(L) GROVE CEDAR CHASE MAPLE	Track 270°T at last assigned altitude

b) Outbound Aircraft

i. Aircraft departing under radar control from Birmingham may be instructed by the radar controller, via aerodrome control, to maintain specific headings.

ii. If, after having been instructed to maintain a specific heading after take-off, a pilot experiences radio failure, he shall climb on the assigned heading to the first altitude detailed in the clearance, maintain this heading and altitude for two minutes, and then proceed in accordance with the published radio failure procedures.

2 PROCEDURE FOR INBOUND/OUTBOUND AIRCRAFT VIA MOSUN/LUXTO

a) Birmingham-MOSUN Procedures

The Birmingham-MOSUN Procedure is only available to turbo-prop aircraft joining or leaving MOSUN FL 160 or below between Mon-Fri 0900-1700 (0800-1600) excluding public holidays.

b) Operators intending their aircraft to make use of the MOSUN procedure on departure must ensure that the following addresses are added to the flight plan:

EGWDZQZX and EGFFZPZX and EGTTZFZC

Significant delays may be encountered in the event that these addresses are omitted.

c) MOSUN Departure Clearances

When Runway 15 is in use, aircraft departing towards MOSUN will be instructed to follow the MOSUN 15 procedure. For example: “Callsign, MOSUN 15 procedure, squawk XXXX”.

i. MOSUN 15 Procedure - Runway 15

At 2 DME, turn right to track 165 to 4 DME, then turn right cleared to leave controlled airspace on track MOSUN, climb to altitude 6000 FT.

When Runway 33 is in use, aircraft departing towards MOSUN will be issued with the BRUMI 1M SID.

ii. BRUMI 1M Departure - Runway 33

The BRUMI 1M SID is available to turbo prop aircraft joining at MOSUN FL 160 or below between the hours specified in paragraph 2a.

d) During the hours when N92 is available:

When Runway 33 is in use, aircraft filing via N92 will receive an BRUMI 1M departure.

When Runway 15 is in use, aircraft departing to join N92 at LUXTO will be instructed to follow the LUXTO 15 procedure. For example:

“Callsign, LUXTO 15 procedure, squawk XXXX”

i. LUXTO 15 procedure – Runway 15

At 2 DME, turn right to track 165 to 4 DME, then turn right direct LUXTO, climb to altitude 6000 FT.

3 PROCEDURE FOR INBOUND AIRCRAFT

a) **Standard Terminal Arrival Routes (STARs)**

i. Standard Arrival routes for aircraft inbound from the airways system will be routed via the Standard Terminal Arrival Routes (STARs) detailed at AD 2-EGBB-7 charts.
ii. Where STARs are designated as RNAV1 Only, Non-RNAV 1 aircraft should file the via the existing route structure as featured in the SRD. Aircraft should not proceed beyond CHASE or GROVE without ATC clearance.

b) **Clearance to enter the CTR/CTA**

i. Aircraft flying the Airways System will be cleared into the CTR/CTA without having to request a specific entry clearance.
ii. Aircraft wishing to enter the CTR/CTA from the London FIR must obtain clearance from Birmingham Radar Control before entering Controlled Airspace.

c) **Holding.** Holding patterns are as follows:

Birmingham NDB(L) BHX	Holding axis 147° MAG, turning right at the facility. (Lowest holding ALT 2500 FT) **(See Note)**.
GROVE	Holding fix HON VOR/DME 284°/10 NM on an axis of 104° MAG turning right at the fix. Lowest holding level FL 70. Speed limit 210 KT.
CEDAR	Holding axis 147° MAG, turning right at the fix. (Lowest holding ALT 2500 FT) (**See Note**).
CHASE	Holding fix HON VOR/DME 330°/18 NM on an axis of 150° MAG turning right at the fix. Lowest holding level 5000 FT (**See Note**). Speed limit 210 KT.

MAPLE	Holding axis 327° MAG, turning left at the fix. (Lowest holding ALT 2500 FT) (**See Note**).

Note: *Aircraft holding at the above facilities may be required to do so above the upper limit of the Birmingham CTA, and within the Daventry CTA.*

d) **Missed Approaches**

i. Loss of Radio Communications – The Birmingham Standard Missed Approach Procedures are detailed within the associated Instrument Flight Procedure Charts. The following procedures shall apply in the event of executing a missed approach with loss of radio communications:

Landing direction	Procedure
Runway 15	Climb ahead to 1000 FT (QNH). Turn right onto track 166° MAG to 2500 FT or I BIR DME 4, whichever is the later, then turn left to NDB(L) BHX.
Runway 33	Climb ahead to 2500 FT (QNH) or I BM DME 2, whichever is the later. Then procedure turn right to NDB(L) BHX.

ii. Non-Radar Procedures – The Birmingham Standard Missed Approach Procedures are detailed within the associated Instrument Flight Procedure Charts. The following procedures shall apply in the event of executing a missed approach during non-radar operations.

Landing direction	Procedure
Runway 15	Climb ahead to 1000 FT (QNH). Turn right onto track 166° MAG to 3000 FT or I BIR DME 4, whichever is the later, then turn left to NDB(L) BHX.
Runway 33	Climb ahead to 3000 FT (QNH) or I BM DME 2, whichever is the later. Then procedure turn right to NDB(L) BHX.

e) **Speed Control**

i. Pilots should typically expect the following speed restrictions to be enforced:
220 KT from the holding facility during intermediate approach phase;
180 KT on base leg/closing heading to the ILS;
180-160 KT when first established on the ILS;
160 KT between 7 and 4 DME

ii. These speeds are mandatory for applying standardised CDA approaches, optimizing departure flow and for ATC separation purposes. In the event of a new (non-speed related) ATC Clearance being issued (eg an instruction to descend on ILS), pilots are not absolved from a requirement to maintain a previously allocated speed. All speed restrictions are to be flown as accurately as possible. Aircraft unable to conform to these speeds should inform ATC and state what speeds will be used. In the interests of accurate spacing, pilots are requested to comply with speed adjustments as promptly as feasible within their own operational constraints, advising ATC if circumstances necessitate a change of speed for aircraft performance reasons.

4 PROCEDURES FOR OUTBOUND AIRCRAFT

a) After departure, aircraft shall remain on the Tower frequency until instructed.
b) Departure Speed Restriction: In order to optimise the departure flow and assist in the separation between successive departing aircraft a speed limit of 250 KT IAS below FL 100 is applicable until removed by ATC. ATC may remove the speed restriction by using the phrase No ATC Speed Restriction. Pilots are reminded that this phrase does not relieve the pilot of the responsibility to adhere to the ground track of the Noise Preferential Route, which may require a speed/power limitation.
c) If for any reason pilots are unable to comply with the 250 KT IAS speed restriction the pilot should immediately advise ATC and state the minimum speed acceptable. If a pilot anticipates before departure that they will be unable to comply with the speed restriction, they should inform ATC when requesting start-up clearance, stating the minimum speed acceptable. In this case the pilot will be informed before take-off of any higher speed limitation.
d) Pilots of departing VFR flights should expect departure via one of the following 4 designated VRPs closest to the required departure track, not above altitude 2000 FT:

i. M42 Junction 10 (Tamworth);
ii. M6 Junction 3 (Bedworth);
iii. M40/M42 Interchange;
iv. Frankley Reservoirs.

Pilots should state requested VRP on first contact with ATC.

5 SPECIAL VFR FLIGHT

a) Special VFR clearances for flights within the Birmingham CTR may be requested and will be given whenever traffic conditions permit. These flights are subject to the general conditions laid down for Special VFR flights.
b) Aircraft may be given a radar service whilst within the CTR if, due to the traffic situation, ATC considers it advisable. It will remain the responsibility of the pilot to remain at all times in flight conditions which will enable him to determine his flight path and to keep clear of obstacles, and to ensure that he is able to comply with the requirements of SERA.3105 Minimum Heights, SERA.5010 Special VFR in control zones and ENR 1.2 paragraph 1.3(l). Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.

c) Clearance to make Special VFR flights below 1500 FT ALT will not be given in the sector of the Birmingham CTR enclosed by the bearings 240°T and 360°T.

6 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

7 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside Birmingham controlled airspace, within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Birmingham Radar frequency, 123.980 MHz, are encouraged to select SSR code 0010.

524800N 0015216W - 524216N 0021343W -
523130N 0021145W - 520515N 0014622W -
521600N 0011000W - 523440N 0013300W -
524800N 0015216W.

b) Selection of 0010 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the controlled airspace at all times.
c) Whilst squawking 0010 pilots should be aware that Birmingham Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 0010 shall be deselected.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1487
HEIGHTS IN FEET AGL (1001)

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 522201N 0015826W - 523630N 0012133W thence clockwise by an arc of a circle radius 17NM centred on 522722N 0014502W to 521023N 0014512W - 522201N 0015826W.

b) **2500** in the sector defined by the lateral limits; 522201N 0015826W - 523630N 0012133W thence anti-clockwise by an arc of a circle radius 17NM centred on 522722N 0014502W to 523308N 0021112W - 522201N 0015826W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher to **NDB(L) BHX†**.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) BHX†**.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of BHX NDB.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (12/26): COVENTRY HELIPORT ADDED.

BRUMI 1M

BRUMI 1M RWY 33 Climb straight ahead to **BBW01**, left to **BBW02**, left to **BBW04 - BRUMI**.

NOTE 1. Close-in obstacles exist for RWY 33 departures. See Aerodrome Obstacle Chart and EGBB AD 2.10 Aerodrome Obstacles.
NOTE 2. Adhere to maximum speed limits where specified by waypoint constraints.
NOTE 3. Maximum 250KIAS below **FL100** unless authorised by ATC.

ADDITIONAL RNAV DATA
1. DME/DME only procedure: areas of no coverage and limited redundancy are present below **2000** therefore RNAV1 SIDs are available only for approved aircraft that are either GNSS equipped or that have DME/DME and INS/IRU with automatic runway updating capability.

GENERAL INFORMATION
1. RNAV1 SIDs reflect Noise Preferential Routeings. See EGBB AD 2.21 Noise Abatement Procedures.
2. After departure, aircraft shall remain on the Tower frequency until instructed.
3. En-route cruising levels will be issued after take-off by 'London Control'.
4. Report callsign, SID designator, current altitude and cleared level on first contact with 'London Control'.

CHANGE (6/26): MAG INFO REVISED. MAG HEADINGS.

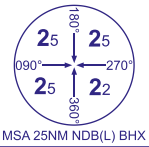
ALTERNATIVE PROCEDURE FROM EXTENDED CEDAR HOLD
Overhead CEDAR at **2500**. Extend the outbound leg of the CEDAR holding pattern to I-BIR DME 9, then turn right onto LOC. When established continue as for main procedure.

AIRCRAFT UNABLE TO RECEIVE DME
Advise ATC and continue as for normal procedure. Radar ranges will be provided at 9NM outbound and at 4NM inbound.



NOTE **1** Aircraft commencing from the NDB(L) BHX holding pattern make a 1NM procedure turn left at NDB(L) BHX to establish on appropriate outbound QDR.
2 In the event of a radar failure, BIRMINGHAM APPROACH callsign should be used on 123.980 or 131.005.

CHANGE (6/26): MAG INFO REVISED. MAG HEADINGS. COVENTRY AIRPORT CLOSED.

ALTERNATIVE PROCEDURE FROM EXTENDED MAPLE HOLD
Overhead MAPLE at **2500**. Extend the outbound leg of the MAPLE holding pattern to **2000**(1672). At I-BM DME 7 turn left onto LOC. When established continue as for main procedure.

AIRCRAFT UNABLE TO RECEIVE DME
Advise ATC and continue as for normal procedure. Radar ranges will be provided at 7NM outbound and at 4NM inbound.

NOTE 1 In the event of a radar failure, BIRMINGHAM APPROACH callsign should be used on 123.980 or 131.005.

CHANGE (9/26): MAPLE HOLD OUTBOUND TRACK CORRECTED.

AERO INFO DATE 08 JUN 26

8	Fuelling	0800-1800 (0700-1700), and by arrangement at other times.
9	Handling	As AD hours
10	Security	-
11	De-icing	As AD hours
12	Remarks	This aerodrome is strictly PPR by website (www.blackbushe.com/ppr) or by telephone for all movements.

EGLK AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	-
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL, AVGAS UL94 100 Aero, 80 Aero, D100, D80, Aero Multi.
3	Fuelling facilities/capacity	AVTUR Jet A-1 bowser with over wing and pressure refuelling capability, AVGAS 100LL mobile bowser. AVTUR Jet A-1 fixed storage capacity 45,000 LT, mobile capacity 19,000 LT. AVGAS 100LL fixed storage capacity 40,000 LT, mobile capacity 11,000 LT. AVGAS UL94 fixed storage capacity 15,000 LT. AVGAS 100LL self-service refuelling using local account card or credit card.
4	De-icing facilities	Limited to Kilfrost RDF in manual sprayers.
5	Hangar space for visiting aircraft	-
6	Repair facilities for visiting aircraft	Limited on-site engineer, by arrangement with ATSU.
7	Remarks	RFFS able to assist with pushback for some types.

EGLK AD 2.5 PASSENGER FACILITIES

1	Hotels	See Airport website: www.blackbushe.com/hotels.
2	Restaurants	Pathfinder Cafe open 0800-1600 (0700-1500) daily: www.blackbushe.com/cafe.
3	Transportation	Pre-booked Taxis or Chauffeur Services: See www.blackbushe.com/taxi. Car Hire: Enterprise Rent-A-Car Camberley will drop vehicles. Nearest Rail Station: Fleet (3.4 Miles). Complementary Crew Car available for Executive Aircraft Pilots (MTOW > 3500 KG) by prior arrangement. Book online: https://www.blackbushe.com/executive.
4	Medical facilities	Company first aiders
5	Bank and Post Office	Cash Machine (ATM) Yateley 2.0 Miles. Post Office Yateley 2.3 Miles.
6	Tourist Office	-
7	Remarks	WC and Refreshment Facilities available to all users in the Pathfinder Café. Complementary Use of Passenger Lounge, Crew Briefing Room and Shower Room in Terminal Building for Executive Aircraft Pilots (MTOW > 3500 KG). See www.blackbushe.com/executive.

EGLK AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A2 RFF Category 3 accepted under remission.
2	Rescue equipment	Simon Gloucester Saro Highlander Protector. Chevrolet Silverado 4x4 Rapid Intervention Vehicle.
3	Capability for removal of disabled aircraft	In the event of an aircraft incident, light aircraft can usually be removed using Airport resources. Large aircraft can be removed using outside contractors in conjunction with Airport staff.
4	Remarks	-

EGLK AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	-
2	Clearance priorities	-
3	Remarks	Winter Operations, no snow clearing facilities available. Contact ATSU for further information.

EGLK AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	TERMINAL APRON Surface: Asphalt -
2	Taxiway width, surface and strength	Taxiway ALPHA: 10.5 M Surface: Asphalt - Taxiway CHARLIE: 15 M Surface: Asphalt - Taxiway DELTA: 10.5 M Surface: Asphalt - Taxiway ECHO: 10.5 M Surface: Asphalt -

		Taxiway FOXTROT: 15 M Surface: Asphalt - Taxiway GOLF: 15 M Surface: Asphalt - Taxiway HOTEL: 15 M Surface: Asphalt -
3	Altimeter checkpoint location and elevation	-
4	VOR checkpoints	-
5	INS checkpoints	-
6	Remarks	-

EGLK AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Aircraft > 3500 KG MTOW will park on Apron Stands 1-9 marked on the ground and with signage, with taxiway guide lines.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 07/25: Runway designation, displaced landing thresholds, runway centre-line, continuous yellow lines mark the runway entry/exit routes. Runway light(s): Threshold - HI green, Runway Edge - HI colour coded red (pre threshold)/white, Runway End - HI red. Taxiway marking aid(s): Yellow centre-line, with green reflectors. Blue edge reflectors.
3	Stop bars and runway guard lights (if any)	Runway guard lights at holding points A1, C1, D1, E1.
4	Other runway protection measures	Illuminated runway hold signs at A1, C1, D1, E1.
5	Remarks	Three WDIs (LGTD): 511926.21N 0005105.69W - 511931.30N 0005041.24W - 511923.79N 0005027.49W.

EGLK AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGLK AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	MET OFFICE HEATHROW
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	MET OFFICE HEATHROW 9 hours.
4	Trend forecast Interval of issuance	-
5	Briefing/consultation provided	Self-briefing.
6	Flight documentation Language(s) used	Charts abbreviated plain language text. TAFs and METARs. English.
7	Charts and other information available for briefing or consultation	Available via Met Office Aviation Briefing Service.
8	Supplementary equipment available for providing information	Webcam and local Met observations at www.blackbushe.com/weather.
9	ATS units provided with information	BLACKBUSHE
10	Additional information (limitation of service, etc.)	Observations only disseminated locally.

EGLK AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Non-radio aircraft not accepted except in an emergency.
b) Limited to three aircraft undertaking circuit practice/training. All circuit bookings managed by ATSU in accordance with airport Rules & Procedures.
c) Circuit Training by non-based fixed wing aircraft not permitted.
d) Flexwing Microlights are not permitted.
e) Jets & turbo-props are required to file IFR flight plans and operate approaches in accordance with the Blackbushe Airport Rules & Procedures at www.blackbusheairport.co.uk/ifr so as to ensure the separation of dissimilar types. Jets & turbo-props must not attempt to enter the ATZ VFR unless it has been established with ATSU that the visual circuit is empty.
f) All pilots/operators are bound by the Blackbushe Airport Terms and Conditions and Rules & Procedures, which are available on the aerodrome website: www.blackbushe.com/vfr.

2 GROUND MOVEMENT

a) All IFR departures and all aircraft parked on the main apron are required to obtain start approval from AFIS before starting engines.
b) Restricted Runway Code A operations on Taxiway Delta. Aircraft with wingspan 15 M or greater or main gear wheel span of 4.5 M or greater are prohibited from using Taxiway Delta, irrespective of any instruction passed by AFIS, except in an emergency.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Fast jet aircraft mixing with much slower GA aircraft should be expected at any time during operational hours. All pilots must exercise caution and always obtain traffic information before entering the ATZ.
b) The grassed surface South of Runway 07/25 between Taxiways C and D is unsuitable for use by certain types of helicopter due to its poor grading. Pilots are cautioned to positively ascertain that the grading of this area is suitable for their operational requirements.
c) Visual glide slope guidance signals for both Runways 07 and 25 are visible to the south of the extended runway centre-lines where normal obstacle clearance is not guaranteed. They should not be used until the aircraft is aligned with the runway.
d) Caution, large concentrations of birds maybe on and in vicinity of the aerodrome.
e) Helicopter training in designated areas takes place on the airport.
f) Blackbushe is located 3.8 NM northwest of Farnborough aerodrome, which shares a similar runway orientation. Pilots should exercise caution in identifying the correct aerodrome from the air, notably when approaching Blackbushe from the south and southeast. Farnborough is distinguishable by a large silver coloured hangar and terminal complex located to the north of the runway.
g) Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class E airspace between ASLAP and 3 NM west of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class Echo airspace when the aircraft is transitioning from a higher classification of airspace.
h) Farnborough controlled airspace exists south of Blackbushe. Pilots to remain outside of this controlled airspace unless in receipt of a clearance directly from Farnborough Radar or Blackbushe Information. See also EGLK AD 2.22, Flight Procedures.
i) Model Aircraft Flying within 0.2 NM radius of 512106.53N 0005112.53W (Eversley Cricket Club, Hampshire) Max height 400 FT AGL; 700 FT AMSL.

5 HELICOPTER OPERATIONS

a) Helicopters must avoid flying parallel with fixed wing aircraft on final approach.
b) Rotary aircraft must contact Blackbushe ATSU for permission to start their rotors/engines.
c) All rotary traffic shall conform to the published circuit procedures and avoid all published noise abatement areas.
d) Rotary aircraft joining from H3/Bagshot VRP arriving from the east shall establish communication with Blackbushe ATSU prior to entering the ATZ. A standard join shall be in compliance with EGLK AD 2.22 paragraph 2 (a) below. If unable to establish communications, aircraft shall remain outside of the ATZ until this can be achieved.
e) Departing:

    i. Operators must inform Blackbushe ATSU if they intend to enter the London CTR via Bagshot VRP (H3) when booking out/ requesting PPR.
    ii. Blackbushe ATSU will obtain a VFR clearance to enter the EGLF CTR1 in accordance with Blackbushe Airport Rules & Procedures S.11 and deliver this to the operator who must acknowledge and comply with it.
    iii. Operators must not lift without first being in receipt of the clearance.
    iv. When departing, operators must comply with the published circuit, climb on the downwind leg and exit to the east of the ATZ, remaining north of the M3 until otherwise instructed by Farnborough Radar.
    v. Rotary traffic intending to enter the London CTR without transiting EGLF CTR1 must depart to the west, turn north when able to avoid the noise abatement areas and remain outside the ATZ.

6 USE OF RUNWAYS

a) When the RVR at Blackbushe is reported as 1500 M or less, Low Visibility Safeguarding will be implemented. The aerodrome will be unavailable to fixed wing VFR traffic.

b) When the RVR at Blackbushe is reported as 800 M or less, LVPs will be implemented. All arrivals are prohibited and only IFR departures permitted. Aircraft departing IFR will be required to inform the ATSU of their designated take-off alternate, as returning to the aerodrome will be unavailable. Departures IFR during LVPs must be in accordance with regulatory, or operator defined minima.
c) When the RVR is reported as 250 M or less the aerodrome will close.
d) The Airport and its runways can be closed at the Airport Managements discretion.
e) PPR is required via website or telephone for all movements.

7 TRAINING

Not applicable.

EGLK AD 2.21 NOISE ABATEMENT PROCEDURES

a) All pilots must familiarise themselves with the noise abatement areas on the airport website: www.blackbushe.com/vfr.
b) Remain well clear of the villages of Yateley and Eversley to the north/northeast of the aerodrome and Hartley Wintney to the west of the aerodrome.
c) When arriving from the northeast, position sufficiently to the west to avoid overflying Yateley and Eversley.
d) On approach to Runway 25, ensure sufficient height is maintained to avoid the use of excessive power. Keep clear of housing areas to the north.
e) On climb-out from Runway 07, a 10° turn to the south (right) as soon as safe to do so will avoid overflying Yateley.

EGLK AD 2.22 FLIGHT PROCEDURES

1 GENERAL

a) Circuits are always to the south of the airfield and are flown at 800 FT (QFE) for most fixed wing aircraft (including twins).
b) Jets & turbo-props are not to enter the visual circuit unless ATSU confirm the circuit is empty. Such aircraft shall file IFR flight plans and receive ATC instructions from Farnborough Radar onto a long final approach so as to separate dissimilar types. See www.blackbushe.com/ifr for more information and diagrams.
c) Where a light twin has difficulty integrating with slower aircraft in the 800 FT circuit, a 1200 FT circuit may be appropriate having caution to controlled airspace. Pilots must communicate their intentions with Blackbushe ATSU.
d) Rotary wing circuits are flown at 800 FT (QFE) typically inside the fixed wing circuit. All pilots should be aware of rotary traffic using non-standard circuits when using the Helicopter Training Area to the south of Runway 07/25.
e) Aircraft operating within the circuit are required to select transponder code A7010 (with associated Mode C and/or Mode S), unless having been allocated with a discrete code by an appropriate ATSU. This transponder code shall be selected before taking off into the circuit, or when rejoining the circuit to land, and prior to entering the LFA.
f) Pilots must at all times remain north of the M3 motorway to avoid straying into the Farnborough ATZ.
g) Circuit traffic shall be limited to a maximum of 3 fixed wing aircraft on circuit details, plus one aircraft departing the aerodrome, and one aircraft returning, providing for a maximum of 5 fixed wing at a time.
h) A maximum of two rotary aircraft, including arrivals and departures, to be operating at any one time.
i) When the rotary circuit is active, the fixed wing circuit shall conform to the published circuit pattern and glide approaches / low level circuits shall not be flown.
j) Circuit details shall be limited to 5 Touch & Gos / Go arounds, with a full stop landing on the 6th approach. Details may be extended if Blackbushe ATSU advises no other aircraft are waiting for a circuit slot.
k) Circuit availability will be provided to aircraft in the order in which they report ready at the holding point for the runway in use. Aircraft returning to the aerodrome and requesting circuits will only be permitted where there is an available circuit slot, and there are no aircraft on the ground waiting for access to the circuit.
l) Pilots engaged in examinations should be afforded circuit priority where possible, and the cooperation of other pilots in vacating circuit slots will be appreciated.
m) Student solo circuit details may not be conducted after 1500 (1400) on weekends and bank holidays, with the exception of winter night flying, see relevant procedures.
n) Instructors are reminded to consider whether traffic complexity levels are appropriate for solo student pilot operations when booking out, particularly whether business jets or turbo-props are expected within the planned operation period.
o) Circuits by non-based fixed wing aircraft will not normally be permitted.
p) IFR jet & turbo-prop traffic will operate straight-in “long final” approaches to Blackbushe. This is to facilitate the integration with Farnborough airspace, and to avoid faster types using the visual circuit with much slower aircraft.

    i. When an IFR fast aircraft is expected, Blackbushe ATSU may inform VFR aircraft that “jet / turbo-prop aircraft expected imminently”. When this information is provided, VFR pilots are expected to either vacate the ATZ to the northwest, or land on their next approach.
    ii. Aircraft waiting to join or re-join the visual circuit may only do so once the fast IFR aircraft is established on final and must ensure they fly their circuit to remain behind the jet or turboprop, taking into consideration wake turbulence.
    iii. Jet & turbo-prop traffic must not attempt to enter the ATZ VFR without first establishing that the visual circuit is empty.

2 JOINING AND DEPARTURE PROCEDURES

a) There are two standard VFR / SVFR joins:

i. From outside CAS (north and west). Joins from the north and west shall descend to circuit height on the “deadside” (to the north of the Aerodrome). Care must be taken not to overfly Yateley or Eversley to the north, and aircraft arriving from the north east should ensure they are positioned sufficiently west to avoid them.
ii. From within CAS (south and east). Aircraft coming from within the Farnborough CTR shall join overhead at 1,600 FT AAL to ensure they are within the LFA. They shall descend on the deadside and integrate with the visual circuit. Care should be exercised not to overfly the noise abatement area of Yateley except in an emergency.
iii. See diagrams on aerodrome website: www.blackbushe.com/vfr.

b) Downwind, base leg, and long final joins may be possible depending on circuit traffic, but pilots are advised to plan for a standard join to avoid circuit conflicts if the circuit is busy.
c) Outside published opening hours (OOH), all aircraft must join using a standard overhead join making blind calls at the appropriate point in the circuit. Pilots should be aware that other aircraft may be operating within the ATZ who may not hear or respond to their calls, and so standard joins are the safest way for all aircraft to join.
d) Runway 07 joins: When joining or descending deadside, take care to remain west of Yateley. Follow the path of disused runway 14/32, keeping it to the left at all times.
e) Unless in an emergency, all fixed wing and rotary aircraft must not depart from either runway to the north over Yateley. Aircraft must first head west before tracking north once clear of the town.
f) Runway 25 departures: If departing to the north or west, straight out departures are permitted with a turn to the right to avoid overflying Hartley Wintney.
g) Runway 07 departures: On climb out, a turn 10° to the south must be made to avoid Yateley. Unless in an emergency, all turns must be to the south. To leave the circuit, climb into the overhead (once clear of the LFA).
h) For more information on circuit procedures, including diagrams, visit the airport website: www.blackbushe.com/vfr.

3 MISSED APPROACHES

a) In the event of an aircraft carrying out a Missed Approach, pilots are requested where able, to carry out a visual circuit (south side of the Runway), remain within the Blackbushe ATZ north of the M3 and operate VFR.
b) Pilots must remain aware of the close proximity of instrument approach procedures to Farnborough, and the likelihood of traffic confliction.
c) Where remaining within the Blackbushe ATZ is not possible, the following Missed Approach tracks/altitudes are recommended to deconflict against IFR operations within Farnborough CAS. Note these have not been assessed for terrain clearance, and pilots must ensure they adhere to their own terrain clearance requirements and maintain a good lookout within Class G airspace for other aircraft in the vicinity.

i. Runway 07

1. Climb straight ahead until exiting the ATZ or 1500 FT QNH (whichever is sooner) then turn left (north) remaining outside of controlled airspace. Maintain VMC (if possible) and remain outside CAS climbing to altitude 2400 FT. Retain last assigned SSR code and contact Farnborough Radar frequency 134.355 MHz.
2. If 2 way contact cannot be established with Farnborough Radar, aircraft should either attempt a further approach to Blackbushe, or divert remaining outside of CAS as appropriate.
3. Pilots should note the Farnborough ATZ is notified as active H24.

ii. Runway 25

1. Climb straight ahead until exiting the ATZ or 1500 FT QNH (whichever is sooner) then turn right on track to the west, maintain VMC (if possible) and climb to altitude 2400 FT. Retain last assigned SSR code and contact Farnborough Radar frequency 134.355 MHz.
2. If 2 way contact cannot be established with Farnborough Radar, aircraft should either attempt a further approach to Blackbushe, or divert remaining outside of CAS as appropriate.
3. Pilots should note the Farnborough ATZ is notified as active H24.

d) Farnborough radar may offer traffic information and guidance on repositioning during its hours of operation.

4 LOCAL FLYING AREA

a) Within a Local Flying Area (LFA) of 2 NM radius, centered on the aerodrome (511926N 0005051W) excluding that part of the circle on or south of the M3 motorway, and that part north of a line joining positions 511705N 0005508W - 512112N 0004247W. The part north of these positions is existing Blackbushe ATZ.
b) Pilots are required to contain their circuits within the LFA and ATZ. In particular, on Runway 25 note to turn base leg west of Hawley Lake to avoid infringing the CTR to the east. On Runway 07 turn base leg east of The Elvetham Hotel to avoid infringing the CTR to the west. See circuit diagrams on Blackbushe Airport website for more information.
c) Pilots of aircraft operating within LFA are responsible for providing their own separation from other aircraft operating within the LFA.
d) VFR flights may take place within the LFA subject to the following conditions:

i. In compliance with the Class D Airspace weather minima as defined in ENR 1.4;
ii. Maximum altitude: 2000 FT QNH.

5 SPECIAL VFR IN THE LOCAL FLYING AREA

a) When the official meteorological report at EGLF Farnborough indicates a ground visibility less than 5 KM, all aircraft operating within the Blackbushe LFA will be considered as special VFR flights and compliance with published procedures within this section will be accepted as compliance with a special VFR clearance.

b) In accordance with ORS4 1467, the CAA has authorised an exemption to SERA 8005(b)(5), permitting multiple special VFR aircraft to operate simultaneously within the LFA subject to the following conditions:

   i. by day only;
   ii. clear of cloud and with the surface in sight;
   iii. in a flight visibility of at least 3000 M;
   iv. at a speed which, according to its airspeed indicator, is 140 KT or less, to give adequate opportunity to observe other traffic and any obstacles in time to avoid a collision; and,
   v. when the reported meteorological conditions at Farnborough Aerodrome include:

      1. a ground visibility of not less than 3000 M;
      2. a cloud ceiling of not less than 600 FT.

c) The following additional conditions exist as agreed between the Blackbushe and Farnborough ANSPs within a Letter of Agreement:

   i. Maximum altitude 1500 FT within the LFA;
   ii. A dedicated SSR Code of A0424 is to be utilised by all special VFR flights;
   iii. Blackbushe ATSU must be open and operational;
   iv. Aircraft must remain north of the M3 motorway at all times unless otherwise coordinated with Farnborough;
   v. Blackbushe will limit the number of aircraft operating within the visual circuit to three special VFR flights.

d) Separation between aircraft operating within the Blackbushe Local Flying Area is not provided. Pilots are responsible for providing their own separation from other such aircraft within said Local Flying Area.
e) All Autonomous SVFR circuits shall be flown at 800 FT AAL.
f) Aircraft joining from within the Farnborough CTR shall join overhead at an altitude of not greater than 1400 FT (1075 FT AAL) to provide adequate separation from Odiham traffic at 2400 FT.
g) The circuit is limited to three aircraft at a time operating SVFR circuits. In addition, arrivals and departures shall be permitted one at a time. Circuit availability will be provided to aircraft in the order in which they report ready at the holding point for the runway in use.
h) Departures on Runway 25 remaining outside of the LFA may continue subject to VFR rules for Class G airspace.
i) Rotary aircraft capable of operating circuits north of the LFA, remaining outside controlled airspace may continue to do so, VFR. Such aircraft must communicate their intentions to remain outside controlled airspace to Blackbushe ATSU. All fixed wing aircraft must conform to the published circuit, operate within the LFA, and will be considered special VFR.
j) If all 3 circuit slots are in use, then subsequent aircraft may depart, (including using the LFA if departing on Runway 07) but may not remain in the circuit for Touch & Gos or Go-Arounds.
k) Joining aircraft may request circuits prior when approaching the ATZ, but aerodrome policy does not permit these if all 3 circuit slots are in use. Blackbushe ATSU will state “Special VFR Circuit full, standby”. Joining traffic may then elect to join the circuit to land only; or may remain outside of the ATZ until Blackbushe ATSU advises there is a circuit slot.
l) Aircraft joining when the SVFR circuit is full that need to go-around for any safety reason are requested to follow the recommended go-around profile to avoid entering the LFA:

   i. Runway 25 – Climb straight ahead, bearing right (to the north) to avoid overflying Hartley Wintney, exit the ATZ, and position to re-join.
   ii. Runway 07 – Climb straight ahead until exiting the ATZ, or 1500 FT QNH (whichever is sooner) then turn left (north) remaining outside of controlled airspace and position around the north of Yateley (without overflying noise abatement areas) to re-join from the north west.

m) Where the official meteorological report at EGLF Farnborough indicates a ground visibility less than 3000 M, all aircraft operating within the Blackbushe LFA will be required to land on their next approach or vacate the LFA. Any special VFR flights will need to be provided a clearance to operate one at a time by Farnborough as follows:

   i. Clearance to operate within the LFA, Special VFR will need to ensure required separation from other IFR/SVFR operations, and will be relayed from Farnborough via the Blackbushe AFISO when manned, or issued directly by Farnborough Radar for aircraft operating out of hours. The separation requirement will result in only one aircraft being able to operate Special VFR at a time within the LFA;

      1. Remain clear of cloud and with the surface in sight;
      2. Maximum altitude: 1500 FT QNH;
      3. Fly at a speed of 140 KT IAS or less;
      4. A minimum cloud ceiling of 600 FT;
      5. A minimum flight visibility of 1500 M;
      6. In compliance with the requirements of ENR 1.2.

n) When IFR traffic is operating at Blackbushe, aircraft operating special VFR will be required to land or vacate the LFA in accordance with Rule 10.2 of the Blackbushe Airport Rules & Procedures.

   i. Due to the proximity of Farnborough and RAF Odiham, some types of IFR flights into or out of those aerodromes will conflict with the use of the LFA SVFR. In such situations Farnborough Radar may inform Blackbushe that SVFR is temporarily unavailable, and Blackbushe traffic shall be required to land on the next approach or vacate the LFA / ATZ.

o) Blackbushe ATSU will make use of specific phrases to advise pilots of the availability of slots within the special VFR circuit, and when aircraft are required to vacate. For examples of these see the Blackbushe Airport Rules & Procedures available on the airport website.

6 AIRCRAFT IN THE FARNBOROUGH CTR OUTSIDE THE BLACKBUSHE LFA

a) Aircraft operating VFR or Special VFR in the Farnborough CTR inbound to Blackbushe (or otherwise) must also satisfy the requirements of Rule 11 of the Rules of the Air 2015 by contacting Blackbushe ATSU before entering the Blackbushe ATZ, including the LFA. Farnborough Radar will, whenever possible, permit an aircraft to leave frequency temporarily in order to do so. If this is not possible, aircraft must leave the CTR clear of the Blackbushe LFA and route to Blackbushe from a northerly direction.

b) Pilots requiring a VFR or Special VFR clearance to transit the Farnborough CTR must not fly beyond the LFA/CTR boundary or otherwise enter the CTR until a clearance has been obtained from Farnborough Radar.

7 ATS ROUTE FLIGHTS

a) **General**

In order to provide improved ATC handling a system of Standard Routes has been established and these are published in the UK Standard Route Document (SRD) which can be found here:

http://www.nats.aero/ais.

Additionally, aircraft inbound via the ATS Route Network must follow the Farnborough Standard Arrival Routes (STAR) as shown at AD 2-EGLF-7-1 to 7-8.

b) **Flight Plans**

Pilots wishing to fly on the ATS Route System are to flight plan via the appropriate routes detailed in paras (c) and (d) and include EGLFZTZX in their Flight Plan.

c) **Inbound Aircraft**

i. **Routes**

Inbound aircraft that are RNAV 1 compliant are to flight plan via the RNAV 1 Standard Arrival Routes (STARs) associated with Farnborough as detailed in AD 2.EGLF-7-1 to 7-2 and AD 2.EGLF-7-5 to 7-8. Other aircraft are to flight plan via the RNAV 5 STARs as detailed in AD 2.EGLF-7-3 to 7-4.

Note: *Arrivals routing via RNAV 5 STARs may be tactically routed via 5LNC points detailed within the RNAV1 STAR plates. Crews should be familiar with the following 5LNC points:*

Point	Latitude	Longitude
INDOX	511839.55N	0010114.04W
DIXIB	511412.22N	0005053.53W
EVATA	510821.29N	0004557.52W
LUXIV	510510.63N	0004657.06W

ii. **Inbound Procedures**

1. After leaving the ATS Route System, pilots will normally be provided with a radar service outside CAS by Farnborough Radar during the notified operating hours shown at EGLF AD 2.18. A contact frequency will be given by London Control before leaving the ATS Route System.
2. When Farnborough Radar Unit is closed or unable to provide a radar service, pilots will be instructed to leave CAS in the vicinity of PEPIS and are then to proceed by a route which remains outside of CAS.

iii. **Speed Limits**

Speed limit points are included within the various Standard Arrival Routes (STARs) referred to in c (i).

iv. **Loss of Communications Procedures (inbound aircraft)**

Aircraft should descend to leave CAS at an appropriate point and proceed outside CAS in accordance with the Basic Loss of Communications Procedures detailed at ENR 1.1, paragraph 3.4.

d) **Departing Aircraft**

i. **Routes**

1. ATS Route joining clearance is to be requested for the first ATS Significant Point in the routes detailed below. **These routes are not assessed for obstacle clearance and do not constitute Standard Instrument Departure procedures.**
2. Pilots who wish to join the ATS Route Network at other than CPT, GWC or HAZEL should flight plan to join the Airways System when clear of the London TMA.

Note: *Pilots should be aware that the provision of ATS is extremely limited for any flight outside CAS between OCK/BIG/DET. This is due to the large number of locations from which extensive VFR operations take place in this constrained area, combined with the limitations of any ATS provision.*

Pilots should therefore take into account the lack of available ATS in any area that is known to be busy with multiple VFR operations and should anticipate the extended time that may be required to operate outside CAS before any joining clearance can be provided.

Additionally, requests made to LTC Swanwick to join CAS prior to the boundary of the London TMA may be unfulfilled due to sector workload and it should also be noted that below FL 70 a Basic Service is the only ATS available from LTC Swanwick TMA controllers.

Departure to	Via	Route	Notes
North	CPT	As per UK SRD	Includes departures to EGGW, EGSC, EGSG, EGSS and EGSU
Northeast			
West			
Northwest			
South	GWC	As per UK SRD	Includes departures to EGKA, EGKB, EGKK, EGKR, EGLC and EGMC
East	HAZEL	As per UK SRD	Includes departures to EGLD, EGLL and EGWU
Southeast			
Southwest			

Note: *See UK Standard Route Document:*

http://www.nats.aero/ais.

ii. **Procedures**

1. **Pilots are to ensure that they have received and acknowledged a joining clearance before entering CAS.**
2. The Blackbushe ATSU will notify the pending departure to London Terminal Control (Swanwick) (LTCC) and will co-ordinate the departure with Farnborough.
3. When Runway 07 is in use at Blackbushe, the Blackbushe ATSU will normally relay joining clearances, to enter the Farnborough CTR/CTA, to pilots on behalf of Farnborough. At all other times the Blackbushe ATSU will issue pilots with after departure instructions and pilots must remain outside of CAS until a clearance to enter CAS has been issued by Farnborough or LTCC.
4. Aircraft will contact Farnborough Radar as soon as possible after departure from Blackbushe whilst maintaining a listening watch on the Blackbushe frequency until clear of the ATZ. Unless otherwise instructed, the Farnborough Radar frequency is 134.355 MHz.
5. Farnborough Radar will individually coordinate entry into the ATS Route Network with LTCC once the departure is airborne. This may require the aircraft to leave Farnborough CAS prior to subsequent join into the LTMA. If this is the case, Farnborough may provide a Traffic Service or Deconfliction Service as appropriate.
6. If Farnborough Radar is closed or is unable to provide a radar service outside CAS the Blackbushe ATSU will transfer the aircraft directly to the appropriate LTCC sector and the pilot must request clearance to join CAS.
7. Pilots are reminded of the need to comply with any Air Traffic Flow Management measures in force at the time.
8. Departures outside of the opening hours of Blackbushe ATSU requiring airways joining clearance are requested to call the London Terminal Control Supervisor on 02380-401104 prior to departure in order to activate their flight plan and receive an airways squawk. During the opening hours of Farnborough pilots shall also telephone Farnborough on 01252-526015. For Farnborough opening hours see EGLF AD 2.3.

iii. **Loss of Communication Procedures (outbound aircraft)**

1. Pilots should adopt the Loss of Communications Procedures detailed at ENR 1.1, paragraph 3.4.

Flights which have not received an ATC clearance to enter CAS should not enter CAS unless an overriding safety reason compels entry.

e) **Warnings**

Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class Echo airspace between ASLAP and 3 NM West of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class Echo airspace when the aircraft is transitioning from a higher classification of airspace.

Within these volumes of airspace VFR traffic may be operating but not in communication with Farnborough.

8	Remarks	-

EGNH AD 2.3 OPERATIONAL HOURS

1	AD Administration	0700-2000 (0600-1900) and by arrangement.
2	Customs and immigration	0700-2000 (0600-1900) subject to 24 hours notice. Mandatory handling for flights originating outside the UK FIR (including N Ireland).
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	As AD Hours.
8	Fuelling	As AD hours.
9	Handling	As AD hours. OOH avaliable subject to operational limitations, contact handling agent, see AD 2.2-6.
10	Security	H24
11	De-icing	-
12	Remarks	This aerodrome is PPR.

EGNH AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	By arrangement.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL AD80, AD100, W80, W100, 100
3	Fuelling facilities/capacity	Jet A1 bowser 17,000 LT capacity.
4	De-icing facilities	Limited self-service de-icing, contact the handling agent, see AD 2.2-6.
5	Hangar space for visiting aircraft	Limited overnight hangarage up to 10,000 KG MTOW, contact handling agent, see AD 2.2-6.
6	Repair facilities for visiting aircraft	By arrangement only. B1 and B2 licensed engineers available, contact handling agent, see AD 2.2-6.

7	Remarks	Mandatory handling for aircraft >3000 KG. Airport Appointed and Authorised Handling Agent: Hangar 3 Blackpool Ltd. GPU and lavatory services available. For contact details see AD 2.2-6. AVGAS refuelling for helicopters without wheels is available, pre-note ATC via PPR.

EGNH AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotels at Airport and within 1 mile. Discount accommodation rates available, contact handling agent, see AD 2.2-6.
2	Restaurants	Large choice in the local area.
3	Transportation	Taxis, Buses. Nearest railway station Squires Gate 0.2 NM. VIP road transfers and helicopter transfers available, contact handling agent, see AD 2.2-6.
4	Medical facilities	First aid available.
5	Bank and Post Office	-
6	Tourist Office	-
7	Remarks	-

EGNH AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A4 RFF Category A5 accepted under remission. RFF Category A6 available but subject to minimum 24 hours notice and availability of category upgrade; handling requests to handling@blackpoolairport.com or blkhandling@hangar3blackpool.com if handled by Airport Authorised Handling Agent (Hangar 3).
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	15,270 KG. Contact 0844-4827171.
4	Remarks	-

EGNH AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical De-icing.
2	Clearance priorities	NHV Helipad 1 and 2 - Taxiway Alpha - Runway 10/28 - other taxiways as necessary.
3	Remarks	Latest information from: ATC 01253-472527.

EGNH AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	APRON Surface: Concrete and asphalt NIL
2	Taxiway width, surface and strength	Taxiway ALPHA: 18 M Surface: Asphalt NIL Taxiway BRAVO: 15 M Surface: Asphalt NIL Taxiway CHARLIE: 15 M Surface: Asphalt NIL Taxiway DELTA: 15 M Surface: Asphalt NIL

		Taxiway ECHO: 15 M Surface: Asphalt NIL
3	Altimeter checkpoint location and elevation	Apron 33 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking chart.
6	Remarks	-

EGNH AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Aircraft >3000 KG to be parked under the instruction of a marshaller. Marshaller guidance also available on request.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 10/28: Runway designation, runway threshold markings, centre-lines, Runway 28 TDZs. Runway light(s): Runway 28 yellow caution zone lighting. Taxiway light(s): Edge and centre-line lighting, blue edge lighting on Taxiway Alpha via the main Apron to B3 and Taxiway Echo south of Taxiway Charlie. Green centre-line lighting on Taxiway Echo north of Taxiway Charlie. Additionally reflective edge and centre-line markers are installed between B3 and B4 and on the eastern section of Taxiway Charlie (between Bravo and Echo).
3	Stop bars and runway guard lights (if any)	Runway guard lights at A3, C1, D2, E2.
4	Other runway protection measures	-
5	Remarks	At night-time taxiways with reflective markers may be used by aircraft which have a serviceable taxi or landing light which must be illuminated. It is the pilot's responsibility to refuse taxi clearance via these routes at night if not so equipped. Taxiways without powered lighting will not be used in either visibility or RVR of 1500 M or less. 2 X WDI: 534612.67N 0030110.16W (LGTD), 534627.70N 0030220.42W (LGTD).

EGNH AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGNH AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) The aerodrome is PPR for all aircraft movements. Prior permission must be obtained from ATC; this may be requested by:

- Arranging directly with ATC by telephone;
- Submitting a PPR form online https://www.blackpoolairport.com/ppr/; or
- Arranging through a based operator/handling agent.

Note: *Filing a flight plan does not constitute a PPR request.*

b) Aircraft using Blackpool Airport are recommended to carry third party insurance cover of not less than £5,000,000.
c) Aircraft using Blackpool Airport do so in accordance with Blackpool Airport Terms and Conditions, a copy of which is available on application.
d) All movements outside published hours and amendments to these must be notified to ATC and RFFS in advance, prior to 2000 (1900) on the day of operation.
e) Parachuting is not permitted at Blackpool aerodrome.
f) The wearing of high visibility clothing is mandatory for all personnel operating on the apron and manoeuvring areas, including flight crew.

g) Diversion procedure: All operators are advised that before filing Blackpool as an alternate, they are required to have made arrangements for ground handling; this arrangement is subject to the agreement of the Airport Management. Nothing in this procedure shall, however, prevent an aircraft that has declared an emergency from landing.
h) Mandatory handling is required for all aircraft >3000 KG. Handling requests to be submitted to handling agent, see AD 2.2-6.
i) Any inbound aircraft requiring fuel are requested to advise ATC before landing.

2 GROUND MOVEMENT

a) When requesting start-up, pilots should give the full callsign, type and location. Aircraft must be ready in all respects to start before calling on the appropriate frequency.
b) If within 30 minutes of a previously issued CTOT the flight is unable to comply with that CTOT, the pilot should advise Blackpool ATC (via the handling agent if needed) as soon as possible.
c) Parking for visiting aircraft is provided on the Main Apron. The northern extremity of the parking area is bounded by a 2 M high fence, marshaller assistance is available if requested by pilot. Additional parking available on Stand 1 or with based executive handling agencies.
d) Taxiing and parking on grass areas prohibited.
e) AVGAS pumps are located to the western side of the main apron; aircraft should approach the pumps so that they are facing south, on the eastern side of the fuel farm.
f) Authorised vehicles operate between the Loop Apron and Main Apron without ATC clearance. Helicopters must not overfly this area below 200 FT.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) **Potential for misidentification.** Warton Aerodrome is approximately 6 miles to the South East of Blackpool Airport and has a similar layout. The approach paths for the two main instrument runways at Warton (RWY 25) and Blackpool (RWY 28) cross each other approximately 8 NM from Blackpool and 3 NM from Warton. All pilots are reminded to exercise caution as misidentification is common. Ensure you have the correct Aerodrome in sight before committing to your approach. A video providing additional information can be accessed at https://www.youtube.com/watch?v=CQC7JnwdY8.
b) Damage to the grass areas to the edge of paved surfaces caused by rabbits.
c) Pink Foot Goose activity is present in the vicinity of Blackpool from September to April. Skeins range from 10 to 500 birds but can be in significantly larger quantities. Most activity takes place in daylight but the birds may be present at any time of day or night up to 2,000 AMSL. Route is generally North-South or South-North anywhere up to 4 KM East of the aerodrome. Goose activity affects Runway 10 climbout/28 approach and potentially 13 climbout/31 approach. ATC will normally attempt to pass warnings of detected birds.
d) Intermittent transiting Gulls crossing Runway 28 North to South and South to North from midpoint to 28 approach are possible all year round, but are most likely from April to September. Bird control is on site 7 days per week to deal with this potential hazard. Thermalling Gulls are sometimes present above an established nesting site 1000 M due North of the ARP April to September. These Gulls thermal above the site to various heights in hot weather or when disturbed by helicopters. The thermalling activity usually remains outside the approach to any of the runways currently in use. It may infringe on GA circuits or low level helicopter traffic transiting directly over this area.
e) Large flocks of Starlings may be encountered in the vicinity of the airport especially to the East and North West but are controlled to the point where only smaller flocks of 1 to 50 are encountered on the airfield itself. These birds are controlled by bird patrols and grass management. Peak period is around May.
f) Pilots, especially rotary wing, should, where possible, avoid overflying a liquid petroleum gas storage facility located at 534643N 0030126W (022 degrees True range 850 M from ARP).
g) Category A Police and Air Ambulance flights can take place at the aerodrome H24. Pilots should afford these flight priority where possible subject to the Rules of the Air Regulations and flight safety.
h) Non standard helicopter landing lighting installed adjacent to H North (SW of Control Tower), this system is strictly reserved for emergency service helicopter operations outside normal aerodrome hours.

5 HELICOPTER OPERATIONS

a) Three helicopter aiming points in the grass areas marked with an 'H':

   i. H NORTH - 534631.4183N 0030226.2817W (Approx. 160 M South West of the ATC Tower);
   ii. H EAST - 534632.7491N 0030211.7586W (Approx. 160 M South East of the ATC Tower, light helicopters maximum 2.6 Tonnes);
   iii. H SOUTH - 534611.0326N 0030208.3570W (Approx. 355 M South of Holding Point D2).

b) Procedures

   i. Air taxiing on apron areas is not permitted except with authorisation from ATC. Marshaller available on request.
   ii. All training must be booked through ATC. The filing of a flight plan does not constitute compliance.

6 USE OF RUNWAYS

a) Runways 13/31 are not available for use during night time hours. Available for Daylight use only.
b) Right hand circuits are in force for Runways 28 and 31.
c) Unless an AOC holder has less restrictive minima, take-offs in RVR less than 400 M will not be permitted as Runway 10/28 is not equipped with centre-line lighting.

7 TRAINING

a) All instrument training must be booked through ATC. The filing of a flight plan does not constitute compliance.

EGNH AD 2.21 NOISE ABATEMENT PROCEDURES

a) All aircraft are to be operated in such a manner as to cause the least possible disturbance to surrounding residential areas.
b) Every operator of turbo-jet/turbo-fan aircraft shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.
c) The following noise routeings shall apply to departing turbo-jet/turbo-fan aircraft:

i. Runways 10 and 28 - Climb straight ahead to at least 1500 FT AMSL before turning onto course;
ii. Runway 13/31 is NOT available for turbo-jet/turbo-fan engine aircraft except when weather conditions preclude the use of Runway 10/28.

Note: *The above routeings are compatible with normal ATC practice. In individual cases they may be varied owing to operational circumstances. The use of the Noise Preferential Routeings specified above is supplementary to the noise abatement take-off techniques detailed in Operations Manuals.*

d) These requirements may at any time be departed from to the extent necessary for avoiding immediate danger.

EGNH AD 2.22 FLIGHT PROCEDURES

1 IFR ROUTINGS

- Inbound from N864: via WAL
- Inbound from DTY CTA: Via POL
- Inbound from Scottish TMA: Via DCS
- Outbound to N864: Via ESTRY WAL
- Outbound to DTY CTA: Via ESTRY WAL
- Outbound to Scottish TMA: Via RIBEL/GASKO

2 INSTRUMENT APPROACH PROCEDURES

Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

3 VISUAL REFERENCE POINTS (VRP)

a) Pilots approaching Blackpool from a southerly direction under VFR must always contact Warton LARS 129.530 MHz in the first instance during their notified hours of operation.
b) During the notified hours of Warton Radar, VFR traffic departing Blackpool in a southerly direction should anticipate departure instructions to route via St Anne's Pier, then Southport Pier, not above altitude 1,500 FT AMSL until clear of Warton MATZ.
c) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

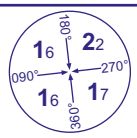
DIRECT ARRIVAL FROM VOR DME POL
(Subject to ATC approval). Depart VOR DME POL on R271 and descend **not below 2600**. Request direct approach from ATC and continue descend **not below 2600** to intercept LOC inbound at I-BPL DME 10. When established continue **not below 2000**(1972) and continue as for main procedure.



NOTE 1 During reversal procedure, aircraft should not proceed beyond I-BPL DME 13.
2 This procedure has no outer marker. Warton outer marker (75Mhz) may be received in the final approach area at approximately I-BPL DME 9.
3 An incorrect MM indication may be received at I-BPL DME 6, due to intersection with Warton ILS.
4 Lowest altitude to commence procedure from holding or missed approach is **2000**.
5 Aircraft not permitted below **1670** over EGR312 for the purpose of landing at Blackpool.

CHANGE (4/26): MAG VAR. MAG TRACKS. VM(C)OCA(OCH AAL) TOTAL AREA CAT A.

EGHH AD 2.3 OPERATIONAL HOURS

1	AD Administration	Operating hours 0615-0100 (0515-0000). Refer to AD 2.20 item 1.
2	Customs and immigration	As AD hours.
3	Health and sanitation	As AD hours.
4	AIS Briefing Office	Not available.
5	ATS Reporting Office (ARO)	Not available.
6	MET Briefing Office	Not available.
7	ATS	As AD hours. See also AD 2.18. See also AD 2.20 para 4 Warnings.
8	Fuelling	0615-0100 (0515-0000) by arrangement with Bournemouth Airport Fuelling: Email: fuel@bournemouthairport.com Tel: 01202-364217 Fax: 01202-364219 Out of Hours by prior arrangement – subject to out of hours fees per hour or part thereof.
9	Handling	As AD hours.
10	Security	H24
11	De-icing	As AD hours.
12	Remarks	Operators requiring aerodrome services between 2130 – 0100 (2030-0000) will be subject to additional charges. Such movements will incur fees in accordance with the current Bournemouth Airport Schedule of Charges and Terms of Use. Refer to AD 2.20 item 1.

EGHH AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Full. By prior arrangement through Bournemouth Airport Handling. Nearest railway siding, Christchurch 3 NM.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL
3	Fuelling facilities/capacity	Mobile bowser supply of AVTUR JET A-1 / AVGAS 100LL on request with Bournemouth Airport Fuelling.
4	De-icing facilities	Available by arrangement through appointed handling agents, Bournemouth Airport Handling or XLR Jet Centre.
5	Hangar space for visiting aircraft	Available by prior arrangement only.
6	Repair facilities for visiting aircraft	Full up to 5700 KG AUW.

7	Remarks	All aircraft that use the Eastern or Western aprons and/or the terminal facilities are required to be handled by an approved handling agent. The airports approved handling agents are: Bournemouth Airport Handling (Charter/Scheduled): Tel: 01202-364252; Email: infodesk@bournemouthairport.com XLR Jet Centre. (Executive): Tel: 01202-364401; Email: jetcentre@xlrbournemouth.com Bliss Aviation Handling Ltd (General Aviation): Tel: 01202-590888; Email: info@blissaviation.com

EGHH AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotel 1 mile.
2	Restaurants	Cafeteria, Restaurant, Buffet and Bar.
3	Transportation	Bus service; Taxis; Nearest railway station, Christchurch 3 NM.
4	Medical facilities	Limited first aid treatment.
5	Bank and Post Office	-
6	Tourist Office	Terminal Building.
7	Remarks	-

EGHH AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	Promulgated Category A7: 0615-0100 (0515-0000). Outside of promulgated HR, the RFF category provided will be as required for the specific aircraft type. RFF Category 8 provided with RFF Category 7 under remission. Category 9 available on request and by prior arrangement, minimum 24 HR notice required.
2	Rescue equipment	As detailed for Category 9.
3	Capability for removal of disabled aircraft	10,000 KG MTWA. Contact OPS Tel: 01202-364155. The registered owner or aircraft operator retains complete responsibility for the removal of the disabled aircraft. All aircraft operators at BOH are required to have aircraft recovery plans.
4	Remarks	-

EGHH AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical de-icing.
2	Clearance priorities	Standard, See AD 1.2.2.
3	Remarks	Braking action assessment by pilot report. Latest information from ATC, Tel: 01202-364150.

1	Apron surface and strength	NORTH APRON Surface: . Stands 21-23: Concrete Stand 25: Asphalt. Stands 21-23: PCR 700/R/A/X/U Stand 25: PCR 625/F/A/X/U SOUTH APRON Surface: Concrete and asphalt Stands 1-6 and 10-11: PCR 858/R/B/X/U Stand 3R: PCR 657/F/B/X/U
2	Taxiway width, surface and strength	Taxiway ALPHA: 16 M Surface: Asphalt PCR 434/F/B/X/U

		Taxiway BRAVO: 23 M Surface: Asphalt PCR 650/F/B/X/U Taxiway CHARLIE: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway DELTA: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway ECHO: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway GOLF: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway MIKE: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway NOVEMBER: 16 M Surface: Asphalt PCR 434/F/B/X/U Taxiway ROMEO: 23 M Surface: Asphalt PCR 650/F/B/X/U Taxiway TANGO: 23 M Surface: Concrete and asphalt PCR 650/F/B/X/U Taxiway WHISKEY: 16 M Surface: Asphalt PCR 434/F/B/X/U
3	Altimeter checkpoint location and elevation	Apron 34 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking Chart.
6	Remarks	Taxiway Bravo available only at the discretion of the Airport Authority when operationally required for Code D or Code E aircraft movements.

EGHH AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Restricted to B737-800 size of aircraft or smaller on apron stands. Unrestricted on remote stands. All apron stands are nose in/push back stands. Stands 1R and 3R are available for larger aircraft at the airport authority's discretion. All stands must be used under marshalling guidance that will provide stop information to pilots. Aircraft may, at times, be required to park off the painted stand guidance lines, to ensure adequate wingtip clearance.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 08/26: Taxi-holding position, runway designation, runway threshold, runway centre-line, fixed distance markings. Taxiway light(s): Green centre-line lighting on Taxiway A, B, R and T. Other taxiways have blue edge lighting. Taxiway W has centre-line and edge reflectors.
3	Stop bars and runway guard lights (if any)	Red stop bars on holding points A, B1, B2, C, D, E, G1, G4, M, N, R and T
4	Other runway protection measures	-

5	Remarks	The portion of Taxiway Golf between holding points Golf 2 and Golf 3, is within the instrument strip. Obstacle marking. WDI: 504639.35N 0015048.29W, 504642.53N 0015008.47W and 504658.98N 0014953.62W (LGTD). Pilots are advised that holding points A and N infringe the glidepath critical area. Taxiing A and N delays possible.

EGHH AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) PPR for all aircraft (see paragraphs b and c). All out-of-hours movements are subject to prior approval (PPR) and confirmation of service availability contact the Airport Duty Manager on 01202-364170. Operators are advised to consult the latest Schedule of Charges prior to operation. The Schedule is available on request or via the Bournemouth Airport website.

   i. All flights, except General Aviation and Military flights, are subject to the prior approval of the Airport Authority, Bournemouth Airport Ltd and prior notification to Airport Coordination Ltd, who act as an agent for the airport. Requests for ad-hoc slot allocations should be made to ACL during working hours Mon-Fri 0830-1700 (0730-1600) by SITA: LONACXH; e-mail: lonacxh@acl-uk.org; or Tel: +44 (0)161-493 1850; Fax: +44 (0)161-493 1853; or at all other times to the Aerodrome Duty Manager +44 (0)1202-364170. OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com/.

b) All visiting commercial and executive aircraft are subject to compulsory handling by either Bournemouth Airport Handling or XLR Jet Centre (see AD 2.4). Flights intending to operate outside the notified operating hours, are subject to prior approval from the Airport Authority. Operators where possible should provide at least 24 hours notice. Bournemouth Airport is unable to guarantee any requests outside of promulgated AD hours.
c) All visiting General Aviation aircraft are strictly subject to PPR and compulsory handling. Pilots must obtain a PPR reference number prior to arrival from Bliss Aviation Handling Ltd (01202-590888) and indicate the purpose of the visit and parking requirements. They will be required to leave the pilot's name, address and contact number. Aircraft without a PPR number will not be permitted to land.
d) Non-radio aircraft are subject to approval by ATC only.
e) Flight planning facilities for General Aviation aircraft are available at Bliss Aviation Handling. Flight Plans are not accepted over the telephone.
f) Pilots must book out with Bliss Aviation Handling or ATC by telephone (01202-364150) prior to departure. Booking out on RTF is not permitted and pilots may face lengthy delays.
g) Landing fees are usually invoiced but can be paid either in person or by telephone through Bliss Aviation Handling Ltd only.

h) In order to comply with the CAA, HSE and Department for Transport regulations, all persons entering airside areas on foot, are required to wear high visibility clothing. All persons entering the Restricted Zone are required to be escorted at all times.
i) All visiting operators must be aware of, and comply with, the airport's Terms & Conditions; these are published with the Airport Fees and Charges, available via the "Airfield Information" link on the Bournemouth Airport Website.
j) Banner towing aircraft are not permitted.

2 GROUND MOVEMENT

a) Entrance to the east and west aprons from Taxiways Alpha and Bravo is restricted to aircraft with a wingspan not exceeding 60 M. Entrance to the east and west aprons via Taxiway Charlie, Delta or Golf from the north is restricted to aircraft with a wingspan not exceeding 41 M.
b) The following restrictions apply to the use of taxiways:

Taxiways, with the exception of Taxiways Romeo and Tango, are 16 M wide and not suitable for use by aircraft with wheelbase more than 18 M and/or wheelspan of 9 M. Taxiways Romeo and Tango are 23 M wide and suitable for use by most current civil aircraft. Taxiway Bravo is 23 M wide and suitable for aircraft up to category E. (Can only be used at the discretion of the Airport Authority when operationally required). That portion of taxiway between the north end of Taxiway Whiskey and the north end of Taxiway Tango is code B with a width of 19.5 M due to the proximity of the Fire Ground Training Area.

c) Due to multiplicity of parking areas, pilots of all outbound aircraft are to state their parked position on initial RTF contact with ATC.
d) Ground Engine running for maintenance/testing is only permitted in accordance with detailed Airport Operational Instructions. All ground running must be booked with ATC (Ext 150) and have the approval of the airport authority. Charges will be in accordance with the current scale of fees and charges airport publication.
e) Compass Swing procedures are permitted at the designated site only. Requests to carry out a Compass Swing must be approved by ATC. Charges will be in accordance with the current Scale of Fees and Charges Airport Publication.
f) Pilots using Taxiway Whiskey should be alert to the movement of vehicles between European Aviation, Hangar 103 and the remotely parked aircraft on Taxiway Tango. Vehicles may be operating on a 'free-flow' basis.

3 CAT II/IIIA OPERATIONS:

a) ATC Low Visibility Procedures (LVPs) will be initiated whenever the IRVR or meteorological visibility is 1000 M and is forecast to deteriorate or the cloud ceiling is 300 FT and forecast to deteriorate.
b) CAT II/IIIa operations apply whenever the IRVR is less than 600 M and/or the cloud ceiling is less than 200 FT. Only Runway 26 is available for CAT II/IIIa operations.
c) ATC will operate a block-to-block taxi system with only one aircraft allowed in each block. Due to these limitations the arrival rate cannot be greater than 12 aircraft per hour.
d) A ‘Follow-me’ vehicle may be used to escort all arriving and departing aircraft, between aprons and the runway holding points, depending on the prevailing visibility at the time, or if requested by the pilot.
e) The following runway entry/exit points will be closed: Alpha, Charlie, Delta, Echo, Juliet, Mike and November.
f) Runway centre-line spacing is 15 M.
g) During CAT II/IIIa operations, CAT III holding points are in use. Pilots may require to backtrack the Runway and must follow ATC instructions.

4 WARNINGS

a) Three roadways, delineated by white lines, exist between the East and West Apron areas. Pedestrian crossing of the Apron taxi lane is only permitted between the designated points. All pedestrians must wear high visibility clothing. No crossing is permitted when the red stoplights are on.
b) A roadway delineated by solid white lines exists across the taxiway in the vicinity of DRAKEN hangars. These routes are uncontrolled and not visible to ATC. The area is floodlit at night and warning signs are situated at the taxiway edge. Pilots are to exercise particular caution when traversing the area. During Low Visibility Procedures and at night, access is controlled by traffic lights.
c) Pilots are warned, when landing on Runway 26 in strong southwesterly wind conditions, of the possibility of building induced turbulence and/or windshear.
d) Hang-gliders and Paragliders are operating within parts of the Bournemouth CTR coastal area, known as area 'Southbourne' (between Sandbanks and Hengistbury Head) and area 'Barton' (between Hengistbury Head and Barton-on-Sea) not above an altitude of 1000 FT (Bournemouth QNH). When active, promulgated by ATIS.
e) AD may operate outside published operating hours for prearranged flights only.

5 HELICOPTER OPERATIONS

a) All Helicopters capable of ground taxiing will use the Runway for take-off and landing and the taxiways for taxiing. All other helicopters will hover taxi using the runway and taxiways and alight and depart as directed by ATC. Helicopters must avoid overflying parked aircraft.
b) Helicopter circuits operate north of Runway 26 and at a height of 700 FT AGL.

6 USE OF RUNWAYS

a) Use of higher TORA, ASDA and TODA figures for Runway 26, shown at AD 2.13 as Runway 26X, require that traffic lights on the public road immediately to the west of the aerodrome should be illuminated. Aircraft operators or pilots are to ensure that they have notified ATC of their requirements to use the higher declared distances when they request engine start-up clearance. There is a restriction on departures from Runway 26 requiring the higher declared distances between 0730-0900 and 1600-1800 (0630-0800 and 1500-1700) when only three such departures per time period are permitted.
b) Runway 08/26 is compatible for use by wide body aircraft up to code E.

c) Due to RESA limitations all aircraft with a MTWA of 5700 KG or more, cannot use any intermediate departure point of either runway.

7 TRAINING

a) Training for non-Bournemouth based operators is only available by prior arrangement with ATC and subject to local traffic. All Turbine powered and all aircraft above 5700 KG MTWA that require visual circuits will need to comply with the Noise Abatement Procedures (AD 2.21) and may be required to be vectored for sequencing purposes.
b) Any requests for training outside the published Aerodrome Operational Hours are subject to Airport Authority approval.
c) Due to the large numbers of aircraft using the aerodrome for instrument training, a booking system is in operation. Training periods can be booked by application to ATC. The filing of a flight plan does not constitute a booking to carry out instrument training at the aerodrome. Failure to make a booking may result in the aircraft being refused use of the facilities. Pilots unable to make the booked time must inform ATC so that a new booking may perhaps be made. Pilots should inform ATC of booking cancellations. The Slot tolerance for beacon training is +/- 10 min and pilots should be aware that at peak times, not adhering to the slot may result in delays and/or cancellations. The Flow Management for Instrument Route training within Solent CTA is controlled by Southampton Airport. Bookings for route training are in addition to Instrument Training bookings made at this aerodrome.
d) All aircraft going around from an approach to either runway that do not need to comply with the Noise Abatement Procedures, shall not commence a turn before at least 1.0 DME, unless otherwise instructed by ATC for expedition or separation purposes.

EGHH AD 2.21 NOISE ABATEMENT PROCEDURES

1 GENERAL

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance to the area around the aerodrome.

2 NOISE PREFERENTIAL ROUTES

a) The following Noise Preferential Routes shall apply to all turbine powered/jet aircraft and all other aircraft with a MTWA greater than 5700 KG, unless specifically otherwise instructed by ATC, or deviation required for safety reasons.

i. Take-off Runway 26:

Climb straight ahead to 0.6 DME, then track 269° MAG to 3.1 DME, before commencing any turn. (This also applies to LH and RH Visual Circuits).

ii. Take-off Runway 08:

1. Required track between 001° and 079° MAG: Climb straight ahead to 1.0 DME, then track 074° MAG to 5.6 DME before commencing any turn.
2. Required track between 080° and 259° MAG: Climb straight ahead to 1.0 DME, then track 074° MAG to 4.1 DME before commencing any turn. (This also applies to RH Visual Circuits).
3. Required track between 260° and 360° MAG: Climb straight ahead to 2.0 DME, to be no lower than 1500 FT QNH before commencing any turn. (This also applies to LH Visual Circuits).

3 TAKE-OFF AND CLIMB PROCEDURES (INCLUDING ‘GO-AROUNDS’)

a) All light propeller driven aircraft with a MTWA of less than 5700 KG, on departure of either runway, shall not commence a turn before passing 700 FT QNH or 1.0 DME (whichever first), unless otherwise instructed by ATC.
b) Operators of aircraft using the aerodrome shall conduct flights in a manner intended to minimise noise disturbance to local communities surrounding the aerodrome, insofar as this is operationally and safely practicable.

4 ILS APPROACHES

a) When using the ILS in IMC or VMC, all turbine powered aircraft and all other aircraft with a MTWA of 5700 KG or more, shall not descend below 2000 FT QNH before intercepting the glidepath, nor thereafter fly below it. Aircraft approaching without assistance from the ILS or radar shall not at any time follow a descent path lower than that which would result from an approach using guidance from the ILS. Aircraft may be routinely vectored or execute procedural approaches below this level within the SMAA, according to ATC procedures.
b) All turbine powered aircraft and all other Aircraft with a MTWA greater than 5700 KG making Visual Approaches to Runway 26 shall intercept the final approach track at:

- Not less than 3 DME from the north;
- Not less than 4.1 DME from the south.

To Runway 08 at:

- Not less than 4 DME from either direction.

c) Between 2130-0630 (2030-0530) all aircraft that wish to self position for an ILS or a visual approach shall establish on final approach at no less than 8 DME and not below 2500 FT QNH.

5 CONTINUOUS DESCENT APPROACHES

a) Turbine powered aircraft are expected to apply continuous descent, low power, low drag approach techniques at all times.
b) Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a low power, low drag, continuous descent approach profile. ATC will provide estimated track distance to touchdown to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the glidepath at the appropriate height for the distance without level flight.
c) To facilitate these techniques aircraft should be flown no faster than 250 KT from the Speed Limiting Points and below FL 100 and 250-210 KT during the intermediate approach phase. Thereafter speed should be managed so as to achieve a continuous descent using as little power or drag as possible. ATC may impose speed control if required for separation purposes.
d) ATC will provide range checks. Pilots who require additional track mileage to facilitate a successful CDA should inform ATC as soon as the requirement is apparent.

6 REVERSE THRUST

a) Pilots are requested to avoid the use of reverse thrust or reverse pitch above idle power settings on landing, consistent with the safe operation of the aircraft.

7 VISUAL CIRCUIT HEIGHT

a) Circuit height for aircraft with a MTWA less than 5700 KG is 1200 FT QNH. For all turbine powered and all other aircraft with a MTWA above 5700 KG, the circuit height is 1500 FT QNH. Aircraft will have to comply with the Noise Preferential Routes and may be required to be vectored for sequencing purposes.
b) Low level circuits are only permitted to the south of the aerodrome and at a height of 700 FT QNH. Maximum two low level circuits per training sortie.

8 ENGINE GROUND RUNNING

a) Engine Ground Running (including idle power) is only permitted Mon-Fri 0800-2000 (0700-1900); Sat 0900-1700 (0800-1600); Sun and PH (idle power only) 0900-1700 (0800-1600). No high power engine runs on Sundays. All Engine Run Sessions must be approved by the Airport Authority and booked through ATC (ext. 150).
b) Use of APU shall be limited as much as possible. APU may be used:

   i. 5 minutes after 'On Blocks';
   ii. 30 minutes before Estimated Time of Departure (ETD).

EGHH AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Inbound Routes.

   i. Full routeings are published in the UK Standard Route Document (SRD). IFR traffic inbound to Bournemouth from the ATS Route network will be routed on the designated Standard Arrival Routes and positioned for Bournemouth by ATC. The Standard Arrival Routes are published at AD 2-EGHH-7-1 to 7-4.

b) Inbound Procedures other than from the ATS Route network

   i. Inbound aircraft other than from the west should route direct to NDB(L) BIA.

c) Holding Procedures

   i. Holding patterns are as follows:

Main Stacks	Holding
Bournemouth NDB(L) BIA (Lowest level 3000 FT ALT)	Holding axis 078° MAG turning left at the facility.
NEDUL (Lowest level 4000 FT ALT)	See AD 2-EGHH-7-4 and Coding Table on AD 2-EGHH-7-7.

2 PROCEDURES FOR OUTBOUND AIRCRAFT

a) The initial departure routes are shown below. Full routeings are published in the UK Standard Route Document (SRD). These routes may be varied at the discretion of ATC (eg. to offer more direct routeing when the traffic situation permits). Pilots must adhere to the Noise Preferential Routes detailed at AD 2.21 before turning onto the specified route. **These routes are not assessed for obstacle clearance and do not constitute Standard Instrument Departure procedures.**

Departing to	Runway	Via	Direction of Turn	Route
North	08	SAM	Left Turn	As per UK SRD
	26	SAM	Right Turn	As per UK SRD
North-West	08	SAM	Left Turn	As per UK SRD
	26	SAM	Right Turn	As per UK SRD
East	08	GWC	Right Turn	As per UK SRD
	26	GWC	Right Turn	As per UK SRD
South	08	THRED	Right Turn	As per UK SRD
	26	THRED	Left Turn	As per UK SRD
West	08	FIR	Left Turn	As per UK SRD
	26	FIR	Direct	As per UK SRD

Note: *See also UK Standard Route Document (available online from NATS/AIS website: http://www.nats.aero/ais.*

3 RADIO COMMUNICATIONS FAILURE PROCEDURES

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1 paragraph 3.4.
b) The routes to be used when leaving the CTR in accordance with the procedures at ENR 1.1 paragraph 3.4 are shown in the table below; the route to be followed is dependent on the position of the aircraft at the time the decision to leave the Airspace is made.

Position at time of decision	Route
Bournemouth NDB BIA	Track 270°(T)

4 FLIGHTS ENGAGED IN INSTRUMENT ROUTE TRAINING - FLOW MANAGEMENT REQUIREMENTS

a) Instrument Route Training may be subject to Air Traffic Flow Management at peak times.
b) All flights planned to engage in Instrument Route Training either wholly or partially within the Solent CTA must:

i. File a flight plan; and
ii. Telephone Bournemouth Approach Control to book a 'Training Slot' within the Solent CTA prior to departure. The telephone number to contact is Bournemouth 01202-364150.

Note: *It should be noted that, normally only one route training detail will be permitted in any 30 minute period.*

c) Instrument Route Training flights operating from Southampton (EGHI) or Bournemouth (EGHH) must conform to the procedures in paragraph 4 b i and ii. These flights will be allocated a take-off time by Bournemouth Approach. A tolerance of take-off time + 15 minutes will be given to allow for ATC or aircraft operation constraints. Aircraft which fail to become airborne within this tolerance, will be required to obtain a new slot.
d) Pilots should note that the preferred Instrument Training Routes and optimum flight levels are as follows:

HI 1	NEDUL - THRED - BIA FL 50.
HI 2	BIA - THRED - NEDUL - FL 50.
HI 3	SAM - CPT - SAM FL 80/70
HI 4	EGHH - SAM - BIA FL 50
HI 5	EGHH - SAM - BIA-EGHH FL 50.
HI 6	EGHI - NEDUL - BIA - SAM - EGHI FL50.
HI 7	EGHI - NEDUL - BIA - SAM - EGHH FL 50

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

Note: *Refer also to VRPs in use at Southampton.*

6 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside Bournemouth CTR, within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Bournemouth Radar frequency, 119.480 MHz, are encouraged to select SSR code 0011.

503620N 0015730W - 504311N 0021212W -
505248N 0021628W - 510128N 0013420W -
505442N 0013925W - 504229N 0013301W -
503620N 0015730W.

b) Selection of 0011 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the controlled airspace at all times.
c) Whilst squawking 0011 pilots should be aware that Bournemouth Radar may make contact in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 0011 shall be deselected.

EGHH AD 2.23 ADDITIONAL INFORMATION

a) Model aircraft flying is occasionally active at the following sites, each up to 400 FT AGL:

i. North End House, Avon. 504800.27N 0014746.29W;
ii. Oldfield, Sopley. 504636.08N 0014545.15W;
iii. Avon Model Flying Club, Matchams Lane. 504846.80N 0014948.65W.

Pilots are advised to exercise caution in these areas as flying is not notified by ATC.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 293
HEIGHTS IN FEET AGL (293)

BOURNEMOUTH

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is **1800** in the sector defined by the lateral limits; 505310N 0020158W - 505557N 0014510W thence clockwise by an arc of a circle radius 8NM centred on 504813N 0014159W to 504029N 0013849W - 503742N 0015532W thence clockwise by an arc of a circle radius 8NM centred on 504526N 0015845W to 505310N 0020158W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum atltitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **NDB(L) BIA**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) BIA**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA Is cleared to Intercept the final approach track.**

CHANGE (9/26): MSA SOUTH WEST REVISED. MINIMUM INITIAL ALTITUDE REVISED. EYRES FIELD GLIDER SITE REPLACED WITH UNLICENSED AD SYMBOL.

EGGD AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1- 6 are nose in/push back stands adjacent to the terminal building. Stand 7N is a nose in/push back stand at the head of the cul-de-sac serving Stands 5 - 9. Stands 14 - 16 and 17 - 20 are nose in/push back stands. Stands 7 - 12 are nose in/push back or taxi through stands as appropriate. Stands 8 - 11 inclusive have both East and West stand blocks installed. Inbound aircraft shall follow the instructions of the marshaller or Follow Me vehicle in order to be parked in an east or west configuration, as instructed. Stands 21, 26, 26L, 29 and 30 are nose in/push back stands. Stands 22 and 23 are nose in/push back stands. The routine push back for these stands is into Link Charlie to face east. Stands 24, 25 and 26R are nose in/push back stands. The routine push back for these stands is into Link Charlie to face west. Stand 28E is a taxi through stand when stand 26L is unoccupied. Stands 31 and 33 are nose in/push back or taxi through stands as appropriate. Stand 28W is a taxi through stand. Night stopping aircraft allocated to Stand 28 shall be marshalled to park facing west. Stands 32 and 34-40 inclusive are nose in/push back stands. W2, W3 and E2 are north facing, nose in/push back off-stand parking positions. W1, W4, E1 and E3 are south facing off-stand parking positions. W5, W6, W7 and W8 are self-manoeuvring off-stand parking positions. All stands must be used under marshalling guidance to provide stop information to pilots. In the event of there being no marshaller present upon approach to the stand, flight crews should hold position on the taxiway or taxilane centre-line and inform ATC that they are awaiting a marshaller (ATC shall request a marshaller from Airside Operations if the ground handling agent is not immediately available).
2	Runway and taxiway markings and lighting	Runway marking aid(s): 09/27: Displaced threshold markings and designators on Runway 27. Threshold markings and designators on Runway 09. Fixed distance markings on Runways 09 and 27, centre-line markings. Runway guard lights are located at all taxiway/runway intersections. Taxiway marking aid(s):

		Taxiway holding point markings. Amber/green lead-on/off lines on Taxiways A and G.
3	Stop bars and runway guard lights (if any)	Located at AX, BX, DX, FX, GX, HX, JX (All H24) and G2, G3, Z1, Z2, Z3 and Z4.
4	Other runway protection measures	-

EGGD AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Aircraft unable to communicate by radio with ATC will not be accepted.
b) All flights are at all times subject to PPR. The filing of a flight plan with NATS Ltd does not constitute permission to use Bristol Aerodrome.
c) Aircraft using Bristol Airport are to carry third party insurance cover of not less than £500,000.
d) Due to restricted General Aviation parking facilities, operators of inbound General Aviation flights must pre-notify published handling agents with their ETA and duration of stay.
e) All aircraft operators should submit details of proposed flights and schedules to Airport Co-ordination Ltd, who act as agents on behalf of Bristol for this purpose. Bristol is an IATA Level 3 coordinated airport as defined by IATA and the UK Department for Transport. It is a condition of use of Bristol Airport that operators fully comply with the time allocated by Airport Co-ordination Ltd on behalf of Bristol Airport. Requests for ad-hoc slot allocations during this period, should be made to ACL during working hours 0730-1600, Monday to Friday by SITA: LONACXH; e-mail: lonacxh@acl-uk.org; Tel: 0161-493 1850; or at all other times to Bristol Airport Duty Manager: 01275-473424.

   These applications must include the following information:

   i. Aircraft owner/operator;
   ii. aircraft type and registration;
   iii. flight number (if applicable);
   iv. requested time of arrival and departure at Bristol;
   v. nominated handling agent at Bristol.

   OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com.

f) Due to limited aircraft stand availability, aircraft wishing to divert to Bristol Airport will be required to ‘fuel and go’ unless aircraft is AOG (Aircraft On Ground). All diversions are approved by the Airport Duty Manager.
g) High visibility clothing must be worn on the apron and manoeuvring area at all times, except for passengers under escort.
h) Local airside procedures and requirements are available from the Airside Ops webpage: www.bristolairport.co.uk/airside.

2 GROUND MOVEMENT

a) A marshaller is required for parking on all stands. Aircraft must wait on the taxiway or apron taxilane until a marshaller is present and gives the correct hand signals to proceed.
b) Headsets are to be used for all engine start and pushback/departure communications. The only exceptions are thunderstorm warning, aircraft port unserviceability, or failure of the headset after the pushback has started or the training of ICAO hand signals (which are to be used in these situations).

Flight crew must inform ATC if they are not in, or lose two-way communication with the ground crew. The request for pushback, and issue of pushback instruction is between flight crew and ATC. Flight crew must relay the instruction verbatim to ground crew.

Before pushback is requested, flight crew must confirm ground crew are ready. This is to ensure the tug driver is able to listen to communication between flight crew and ATC. The tug driver must listen carefully to the pushback instruction and ensure they have understood it. This enables the tug driver to cross check the pushback instruction from ATC to what is communicated by the headset operator.

If the tug driver has not heard or understood the pushback instruction they must not commence pushback. The flight crew should request that ATC repeat the instruction. The ground crew must not commence pushback if they believe a safety concern exists. Any request for amendment to the pushback instruction, or clarification regarding the instruction shall, in the first instance, be directed to ATC by the flight crew. If further clarification is required or the concern cannot be resolved, assistance from Airside Operations is to be requested.

c) Aircraft engine runs: Permission to carry out an engine run is required for an aircraft with one or more of the following parameters:

i. An aircraft equipped with jet engines (including business jets);
ii. any commercial turbo prop engine aircraft;
iii. any aircraft planning a high power engine run;
iv. any out of hours engine run.

Permission will be given via an authorisation code. To obtain the authorisation code, contact the Airside Operations Department on 01275-473705 in advance of the planned engine run time.

d) Most grass areas are unsuitable for parking of aircraft.
e) Bristol Ground channel 121.930 will be open when notified by ATIS. 121.930 is not monitored if not operational.
f) Pilots should request airways or departure clearances prior to start. Clearances are available up to 15 minutes before EOBT.
g) Code D & E aircraft movements between holding points G3 and Z2 will be provided with a follow-me vehicle.
h) B787 and A330 available taxi routes:

	Departure	Arrival
Runway 09	Taxiway Z to Taxiway G, enter Runway at GX.	Runway to vacate either BX (Taxiway B) or AX (Taxiway A) to Taxiway Z to allocated stand.
Runway 27	Taxiway Z to Taxiway A, enter Runway at AX.	Runway to vacate GX, Taxiways G and Z to allocated stand.

i) B787 and A330 aircraft will not be able to backtrack.
j) Flight crew should only request start up/pushback when ready to depart. This shall include doors closed, steps removed, tug attached and communication established with their ground crew.
k) Pilots are to use the minimum power necessary when manoeuvring on the taxiway and taxilane system. This is of particular importance when manoeuvring in the apron cul-de-sacs.
l) Aircraft parking on Stands 22-25 inclusive must enter directly from Taxiway Z, not misroute via Link Charlie.
m) Push and hold procedure is available, arrange via ground crew. Start-up approval is required from ground crew.
n) There are four roadway uncontrolled crossings across apron cul-de-sacs and taxi-lanes on the east and west aprons. Traffic on the crossings is not under ATC control but is required to give way to aircraft prior to entering the crossing point. Pilots should be aware of the proximity of road traffic whilst manoeuvring.
o) Due to insufficient main landing gear clearance, A321 are unable to turn westbound from Taxiway Foxtrot onto Taxiway Zulu, and vice-versa.

3 CAT II/III OPERATIONS

a) Runway 27, subject to the serviceability of the equipment, is suitable for Category lll operations by operators whose minima have been accepted by the Civil Aviation Authority.
b) Pilots will be informed by ATIS broadcast or by RTF when Low Visibility Procedures (LVPs) are in operation.
c) Holding points DX, FX and HX will not be available when LVP are in force.
d) Arriving aircraft Runway 27 - Pilots are to delay the call 'runway vacated' until the aircraft has completely passed the end of the green/yellow colour coded taxiway centreline lights. These lights denote the extent of the ILS Localiser sensitive area.
e) When IRVR is 400 M or less, a follow-me vehicle shall be provided from the edge of the manoeuvring area onto the allocated stand.

4 WARNINGS

a) Ground signals are not displayed, except for light signals.
b) Bird Dispersal is carried out on a regular basis, using a bird control laser, BABS and pyrotechnic equipment. Pilots are warned, however, that birds may not always be detected on the extreme western end of the aerodrome and on the approaches and departure tracks of all runways. Racing pigeon activity over/close to the airport is evident throughout the year, especially from 1 April to 31 October.

c) Hot air balloon launches take place in VMC from Ashton Court (3.5 NM north east of the aerodrome) and from Bath (12 NM east of the aerodrome). Balloons may be observed downwind of these sites within the CTR and within or passing beneath the CTA. All hot air balloons within controlled airspace operating above 1000 FT QNH will be in contact with ATC who will notify pilots of known balloon activity which may affect their flights.
d) Glider and hang-glider activity takes place in VMC within designated glider blocks as follows:

i. Ubley - A small section of the CTR south of Blagdon Lake up to 2500 FT QNH.
ii. Halesland blocks A and B - Bristol CTA-5 to the east of Cheddar Reservoir up to 4000 FT QNH and occasionally up to 5000 FT QNH.
iii. The Bath Gap - Bristol CTA-6 up to 4500 FT QNH.

ATC will notify pilots of known glider activity which may affect their flights (this may be via an ATIS message). IFR flights will be vectored to remain clear of active glider blocks and given descent instructions to maintain at least 500 FT above the gliders' maximum operating altitude.

e) Caution, pilots may experience windshear/turbulence, especially if the wind is strong southeasterly (using Runway 09) or strong westerly (using Runway 27).
f) Laser light display at Weston-super-Mare seafront, 10.5 NM west south west of the airport, may affect pilots making approaches to Runway 09 or departing from Runway 27.
g) Small unmanned vehicles (UAVs) may operate from a site within the CTR approximately 3.5 NM north east of the aerodrome, up to 570 FT AMSL within 1 NM of the site.
h) Model aircraft may operate from a site within the CTR approximately 4 NM northwest of the airport up to 1015 FT AMSL within 0.5 NM of the site.

5 HELICOPTER OPERATIONS

a) A noise sensitive area exists immediately to the north of the northern aerodrome boundary, which should not be overflown below 500 FT QFE.
b) Helicopters must arrive/depart using Runway in use. Easterly departures to turn north and follow the A38 after crossing threshold.
c) Westerly departures should not turn north until crossing the aerodrome boundary.
d) Westerly arrivals from the north should approach following the A38 road and join on a right base for Runway 27, avoiding Felton village and the noise sensitive area to the north.
e) Helicopters are not permitted to over-fly any part of the northside aprons. Any helicopters instructed to land on the northside aprons shall be marshalled by Airside Operations.
f) Helicopter circuit height is 700 FT QFE.

6 USE OF RUNWAYS

a) In accordance with EU OPS Subpart E, the following approach operations are available to approved operators:

i. Runway 09 is suitable for lower than Standard Category I operations supported by an ILS Classification of I/T/1, when the IRVR is not less than 550 M.

7 TRAINING

a) Use of the aerodrome for training purposes is subject to the following:

i. Training is not permitted under any circumstances between 2200-0700 (2100-0600);
ii. Use of the aerodrome for training purposes (navaid/runway/circuit), is subject to approval by the aerodrome operator, and subject to restrictions detailed within EGGD AD 2.20, 1. Airport Regulations;
iii. Inbound and outbound training sorties by based operators are permitted, and subject to restrictions detailed within EGGD AD 2.20, 1. Airport Regulations.

EGGD AD 2.21 NOISE ABATEMENT PROCEDURES

a) In exercise of the powers conferred on it by Section 4 of the Civil Aviation Act 2006, Bristol Aerodrome has established a noise control scheme for the purpose of avoiding and limiting the effect of noise connected with the taking-off or, as the case may be, landing of aircraft at Bristol Aerodrome. The noise control scheme provides as follows:
b) The following procedures may be departed from only to the extent necessary for avoiding immediate danger and for complying with ATC instructions.

i. Aircraft operators are to ensure they comply with the noise abatement techniques for their aircraft type and that operations are conducted in a manner calculated to cause the least disturbance practicable in areas surrounding the airport. Specifically, where possible aircraft operators are requested to avoid the use of reverse thrust after landing, consistent with the safe operation of the aircraft.
ii. When operating IFR, any aircraft carrying out a visual approach must not join the final approach track at an altitude of less than 2200 FT (QNH).

c) Unless otherwise instructed by ATC, aircraft using the ILS in IMC or VMC shall not descend below the altitude specified in ii) above before intercepting the glide path nor thereafter fly below it. Aircraft approaching without assistance from ILS or radar shall follow a descent path which will not result in its being at any time lower than the approach path which would be followed by an aircraft using the ILS glide path.

d) The Noise Preferential Routeings (NPR) given below are compatible with ATC requirements and shall apply in both VMC and IMC. The tracks are to be flown by all departing aircraft of more than 5700 KG maximum certified weight, unless otherwise instructed by ATC or unless deviations are required in the interests of safety.

The NPRs are incorporated in the ATC Standard Instrument Departure procedures (SIDs).

Take-Off Runway	NPR
09	Climb straight ahead to IBON 5.4 NM (IBTS 4.7 NM) DME to be no lower than 3000 FT QNH at this point before commencing the turn.
27	Climb straight ahead to IBTS 5.2 NM (IBON 4.5 NM) DME to be no lower than 3000 FT QNH at this point before commencing the turn.

The obligations of NPRs cease when an altitude of 4000 FT QNH or above has been reached.

e) Jet aircraft and propeller driven aircraft of more than 5700 KG maximum certificated weight making visual approaches to Runway 27 shall intercept final approach track at:

i. Not less than 3 DME, from the North;
ii. Not less than 4 DME, from the South.

f) **Continuous Descent Approaches**

Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a continuous descent profile, when appropriate. ATC will advise pilots of an estimate of the track distance to run to touchdown as soon as possible after first call on the approach frequency.

g) **Aircraft Noise Quota Count System**

Night flying restrictions apply restricting the operations of certain types of aircraft during the periods 2300-0700 (2200-0600). Except in the case of aircraft in distress, all take-offs and landings between these hours are subject to prior application being made to the Airport Co-ordination Ltd. A Night Noise Quota System is in force between 2330-0600 (2230-0500). Full details of the Night Noise Quota System and the night flying restrictions are available from Tel: 01275-475522.

h) Every aircraft using the airport shall, after take-off or 'go around' be operated in the quietest possible manner. Aircraft exceeding 90 dB(A) (103PNdB) by day 0600-2329 (0500-2229) and 85 dB(A) (96PNdB) by night 2330-0559 (2230-0459) at the noise monitoring points located 6.5 KM from the start of roll for Runways 09 and 27 will be subject to a penalty as set out in the airport Fees and Charges.

i) Pilots and engineers should restrict the use of Auxiliary Power Units (APU) to the minimum time necessary. Between 2330-0559 (2230-0459) except when immediately prior to departure, APUs may only be run subject to approval from Airside Operations. An authorisation code will be required; contact 01275-473705. In addition, stands 38 and 39 have additional restrictions: FEGP is to be the primary source of power for aircraft when on stand. APUs may only be operated on these stands when required for operationally essential aircraft systems, immediately prior to departure.

j) In order to avoid overflying Felton Village, when departing Runway 09 and requiring to turn left, all aircraft shall climb ahead to 1 NM DME before commencing the left turn.

k) **Light Aircraft Operations**

i. Runway 27

1. All pilots should arrange their flight so as to minimise noise nuisance.
2. Circuit direction (to land) is normally left hand.

ii. Runway 09

1. Practice engine failures after take-off by single engined aircraft are not permitted.
2. Circuit direction (to land) is normally right hand only. However, ATC may require non-standard circuit direction for traffic integration.

EGGD AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Arrival routes for aircraft inbound from the UK ATS Route network are detailed at AD 2-EGGD-7.

b) **Inbound Procedure other than on ATS Route Network.**

i. VFR and Special VFR aircraft will usually be instructed to route via one of the Visual Reference Points (paragraph 5 refers), not above altitude 2000 FT (aerodrome QNH).

2 PROCEDURE FOR OUTBOUND AIRCRAFT

a) Aircraft Outbound via the ATS Route Network

i. Standard Instrument Departures for aircraft outbound via the UK ATS Route network are detailed at AD 2-EGGD-6.
ii. Aircraft departing on a YORQI or HAWFA SID routeing via L607 requesting a cruising level of FL 110 or above will be expected to maintain climb gradients to achieve FL 110 or above when crossing BUCFA. Pilots of aircraft unable to achieve FL 110 crossing BUCFA must inform ATC for alternative clearance.

Note: *Due to the removal of the BCN DVOR, SIDs as detailed at AD 2-EGGD-6-1 and 6-3 are only available to aircraft that are RNAV 1 compliant.*

b) Aircraft Outbound to the FIR

i. IFR aircraft wishing to leave the Bristol CTR/CTA to enter the London FIR will be cleared by the most direct route consistent with the current traffic situation.
ii. VFR and Special VFR aircraft will usually be instructed to route via one of the Visual Reference Points, not above 2000 FT (aerodrome QNH).

3 SPECIAL VFR FLIGHTS

a) Pilots operating on a Special VFR clearance may be given a radar service whilst within the Bristol CTR/CTA if, due to the traffic situation, ATC considers it advisable. It is the responsibility of the pilot to remain at all times in flight conditions which will enable him to determine his flight path and to keep clear of obstacles and to ensure that he is able to comply with the requirements of SERA.3105 Minimum Heights, SERA.5010 Special VFR in control zones and ENR 1.2 paragraph 1.3(l). Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.

4 HOLDING

a) A 1 minute racetrack procedure, approaching BRI 414 512253N 0024303W on track 095° turning left at the facility.

5 VISUAL REFERENCE POINTS (VRP)

a) Pilots are advised to use caution when routeing via the Bristol VRPs as they are Air Navigation Obstacles with high elevation – See ENR 5.4 dataset for up to date details of ICAO AREA 1 Obstacles.
b) Aircraft entering the Bristol CTR/CTA via M5 Avon Bridge, Cheddar Reservoir, Clifton Suspension Bridge and Chew Valley VRPs may be required to hold at East Nailsea, Barrow Tanks Reservoirs or Churchill VRPs as appropriate.
c) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

6 RADIO COMMUNICATIONS FAILURE PROCEDURE

a) In the event of complete radio communication failure in an aircraft the pilot will adopt the appropriate procedure notified at ENR 1.1.3. The route to be followed when leaving the CTR/CTA in accordance with this procedure is as follows:

Position at time of decision	Route
BRI 414 512253N 0024303W	Track 180°(T) at 3000 FT or last assigned level by ATC if higher

7 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside Bristol controlled airspace, within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Bristol Radar channel, 125.655, are encouraged to select SSR code 5077.

512715N 0030058W - 512349N 0030302W -
510900N 0030300W - 511200N 0025100W -
511200N 0021400W - 513022N 0020241W -
513533N 0020342W - 513945N 0024042W -
512715N 0030058W.

b) Selection of 5077 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the controlled airspace at all times.
c) Whilst squawking 5077 pilots should be aware that Bristol Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 5077 shall be deselected.

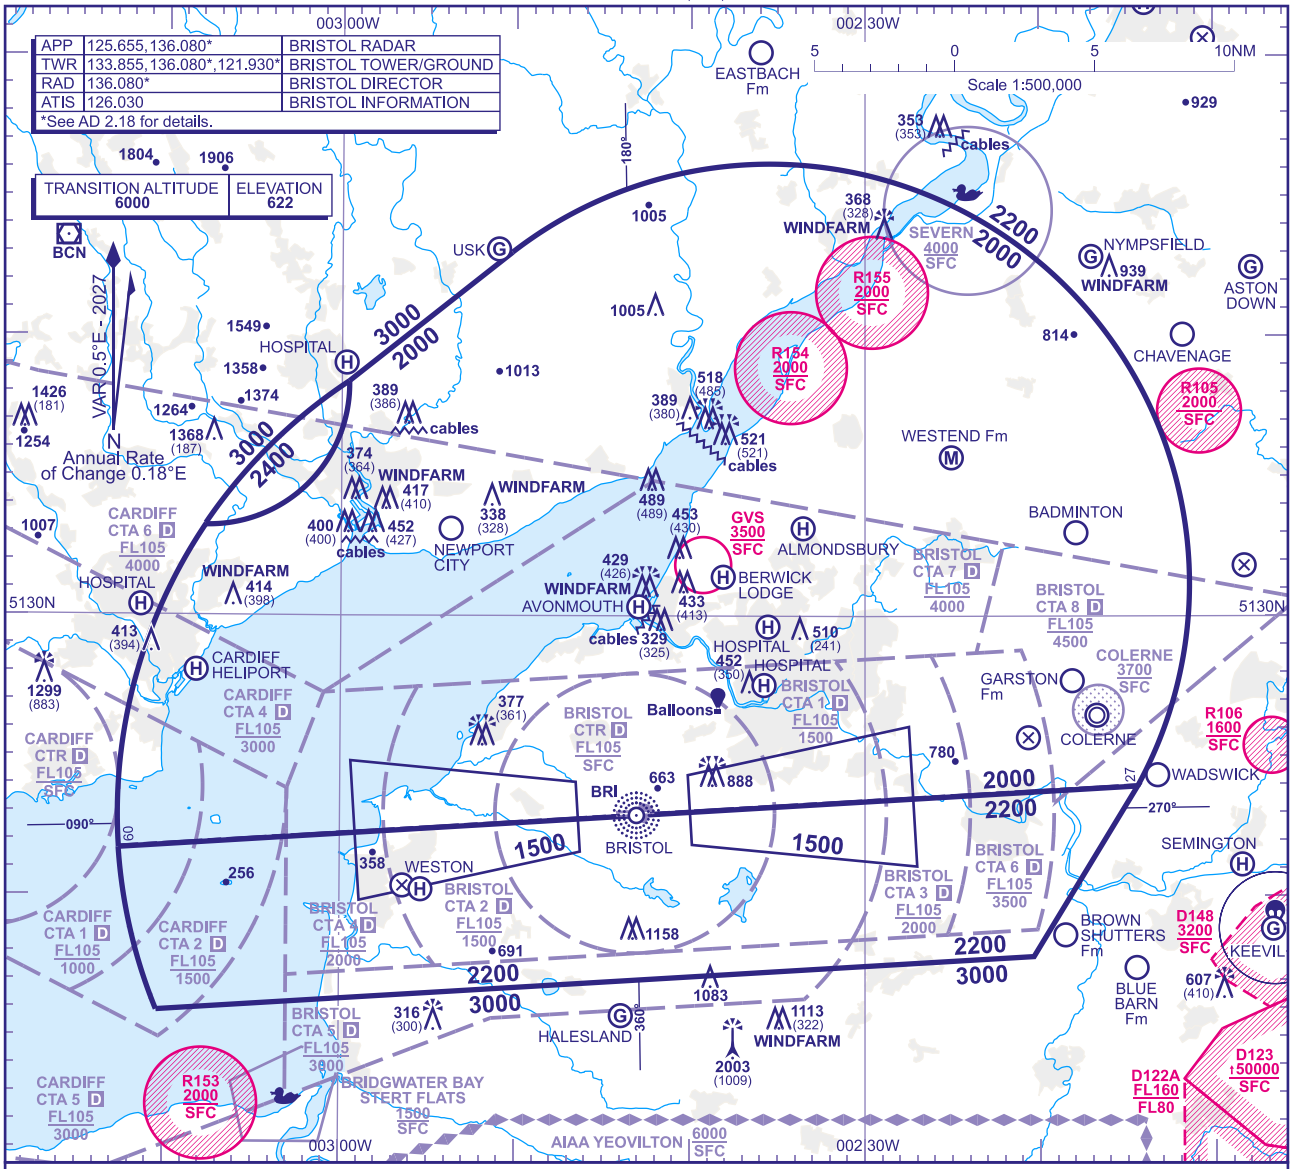
CHANGE (5/26): MAG INFO REVISED.



AERO INFO DATE 23 FEB 26

INTENTIONALLY BLANK

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 2003
HEIGHTS IN FEET AGL (1009)

BRISTOL

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 513822N 0025935W - 514259N 0025015W thence clockwise by an arc of a circle radius 15NM centred on 513110N 0023527W to 512356N 0021426W - 512140N 0031237W thence clockwise by an arc of a circle radius 18.5NM centred on 512258N 0024309W to 513315N 0030744W thence anticlockwise by an arc of a circle radius 5NM centred on 513813N 0030737W to 513822N 0025935W.

b) **2200** in the sector defined by the lateral limits; 512140N 0031237W - 512356N 0021426W - 511751N 0022022W - 511553N 0031024W thence clockwise by an arc of a circle radius 18.5NM centred on 512258N 0024309W to 512140N 0031237W.

c) **2400** in the sector defined by the lateral limits; 513315N 0030744W thence clockwise by an arc of a circle radius 18.5NM centred on 512258N 0024309W - 513822N 0025935W thence clockwise by an arc of a circle radius 5NM centred on 513813N 0030737W - 513315N 0030744W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher to **NDB(L) BRI**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) BRI**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of NDB(L) BRI.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an Intercept of 40 degrees or less and is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

AIRCRAFT UNABLE TO RECEIVE DME I-BTS Advise ATC. Radar Ranges will be passed at 8NM outbound and at 5.8NM inbound (See note 4).

ALTERNATIVE TIMED PROCEDURE CAT C and D aircraft may, in the absence of either DME I-BTS or radar ranges, fly outbound on baseturn procedure for 2MIN 30SEC. (Note: timed procedure **not available for CAT A or B aircraft**).

NOTES
1 Lowest altitude to commence procedure from hold is **2500**.
2 Maximum KIAS for procedure is 110KIAS (CAT A); 140KIAS (CAT B); 185KIAS (CAT C,D).
3 FAT offset 3.8° from RWY C/L and crosses the extended RWY 27 C/L, 1NM from the THR (I-BTS D1.7).
4 ATC unable to provide Radar Ranges when operating SSR only.

CHANGE (9/26): EGD119 REMOVED.

EGCK AD 2.19 RADIO NAVIGATION AND LANDING AIDS

INTENTIONALLY BLANK

EGCK AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) All pilots and personnel, except for passengers and other persons that are being escorted, shall wear high visibility clothing at all times whilst airside.
b) Smoking airside strictly prohibited.
c) Not available to aircraft unable to communicate by radio with A/G. Aircraft with radio failure must follow standard radio failure procedures.
d) Each aircraft commander is responsible for the safety of their passengers and other crew members. To ensure the safety of passengers and crew members, the aircraft commander (or other competent crew member) is to supervise and escort passengers whilst airside
e) All movements outside published hours are subject to the out of hours conditions published on the airport website.

2 GROUND MOVEMENT

a) Taxilanes A and C have been introduced between Stands 1 to 10. Aircraft using these taxilanes must not have a wingspan in excess of 17 M. Aircraft must adhere strictly to the yellow centre-line along the taxilane as maximum clearance from the centre-line to obstruction within the taxilane is 14 M. Aircraft parking on Stands 1 to 10 must park north of the yellow markings on the stand to ensure taxilane clearance is maintained at all times.
b) The responsibility for wingtip clearance during taxiing and parking remains with the flight crew.
c) Aircraft should only taxi on paved surfaces, aircraft using the grass to taxi onto their stand do so at the discretion of the flight crew.
d) Pilots must exercise caution and moderate taxiing speeds on Taxi Lanes A, B, C due to the possible presence of pedestrians and intense aircraft movements.
e) All parking is self-manoeuvring, assistance available on request.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Turbulance might on occassion be experienced when there is an easterly wind.
b) High ground beyond 6 NM southeast of the aerodrome rising to 3560 FT AAL/AMSL.
c) Runway 07 take-off; Beyond 11000 M there is mountainous terrain, rising to 3560 FT.
d) Due to RSPB reserve 1 KM south of the aerodrome, between September-March, there will be increased bird activity.
e) Air Ambulance and Coastguard helicopter operations are based at Caernarfon and will be given the appropriate priority over other traffic when operating. These operations may occur H24 including outside of the operating hours of the aerodrome and pilots are to make a blind call on Caernarfon Radio 122.255 MHz when the aerodrome is published as closed and they are transiting through or close to the ATZ.
f) During periods of heavy rain, runways are liable to have patches of standing water.
g) Light aircraft are warned of the possible effect of wake turbulence by preceding helicopters on approach or departure.
h) Light aircraft should also be aware of the possible effect of rotor downwash generated by large helicopters operating on the aerodrome, including the home based S92 SAR Helicopters.

5 HELICOPTER OPERATIONS

a) No helicopter movements within 300 M, downwind of the wind turbines.

6 USE OF RUNWAYS

a) Runway 02/20 is unlicensed and unavailable for aircraft requiring the use of a licenced runway. For details including dimensions and declared distances contact the aerodrome.
b) All CAT operations to make the approach to the licensed Runway 07/25.
c) Circuit Directions: Runways 07 and 20 – LH, Runways 25 and 02 – RH.

d) Due to high ground and HT pylons left of Runway 25 centre-line, at range approximately 4 NM, pilots are to ensure the aircraft is established on runway centre-line before commencing descent on the APAPIs.

7 TRAINING

Not applicable

EGCK AD 2.21 NOISE ABATEMENT PROCEDURES

Helicopters must not overfly any caravan site within the ATZ below 1000 FT on the QFE.

EGCK AD 2.22 FLIGHT PROCEDURES

a) The aerodrome is in the vicinity of the Valley MATZ. Civil aircraft are to fly at 1500 FT or below (Holyhead QNH) in the Menai Straits area.
b) **Arriving aircraft.** Aircraft should call Valley ATC on 125.230 at least 15 minutes before ETA Caernarfon ATZ boundary.
c) **Departing aircraft.** Unless otherwise instructed, departing aircraft should call Valley ATC on 125.230 immediately after take-off.
d) Circuit height: 800 FT AAL. Aircraft are requested to join overhead not above 1300 FT AAL. Circuit direction: Runway 07 - LH, Runway 25 - RH.

EGSC AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	All parking under marshaller guidance or as directed by ATC. See AD 2.EGSC-2-2 Aircraft Parking and Docking Chart for the location of aircraft parking spots.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 05/23: Designation, centre-line, threshold, edge. Runway 23 marked for precision approach aid and Runway 05 for non-precision aid. Illuminated designator sign at each runway exit. Runway light(s): Runway Turn Pad lighting blue elevated edge. Taxiway marking aid(s): Taxiway centre-line marking. Blue reflective markers on Alpha, Bravo and Foxtrot. Taxiway light(s): Runway guard lights and signs at each holding point to the main runway. Blue edge lights on Charlie and Delta.
3	Stop bars and runway guard lights (if any)	Stop Bars at Runway 05/23 Holding Points Alpha, Bravo, Charlie and Delta.
4	Other runway protection measures	-
5	Remarks	Holding position signs and runway taxi holding positions, runway designators and runway ahead markings provided between taxiways A, B, C, D and the main runway. WDI: 521203.81N 0001010.92E (LGTD) - 521225.90N 0001053.75E (LGTD).

EGSC AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Aircraft unable to communicate by radio with ATC will not be accepted.

b) Insurance; ECAC Resolution 25-1 (minimum levels of insurance) shall apply to all carriers licensed in ECAC member states (GEN 1.2.5 refers). All other aircraft using this aerodrome and its facilities are required to have third party liability insurance cover in the sum of at least £1,000,000. Proof of this insurance should be available for inspection at any time while the aircraft is at the aerodrome.
c) Surcharges will be levied on visiting aircraft arriving or departing outside published operational hours.
d) A security charge may be levied on outbound aircraft requiring to use the aerodrome critical part. Contact FBO Tel: 01223-373214 for details.
e) It is a mandatory requirement that all aircrew and ground staff wear high visibility clothing (minimum standard being a high visibility waistcoat) fastened at all times in external airside areas of the airport.
f) Pedestrians must use the defined pedestrian walkways when transiting to and from aircraft.
g) It is the responsibility of the Pilot in Command to ensure that their passengers are escorted by aircrew or ground staff at all times when on foot in external airside areas of the aerodrome.
h) No smoking airside.

2 GROUND MOVEMENT

a) Light aircraft will be directed to the grass parking area in front of Nº 1 Hangar. Parking is on a grid of four rows marked W, X, Y, Z and numbered 1-8 from west to east. All aircraft will be marshalled except Light Aircraft on grass parking areas and based operators, unless advised otherwise by ATS.
b) When taxiing on the grass, keep to cut grass taxiways. The long grass areas are not inspected and are unfit for manoeuvring.
c) Compass Base, Class 1, located on Taxiway C. Serviceability of this facility does not affect the availability of the taxiway for taxiing aircraft.
d) Runway 05/23 Turn Pads 70 M wide - Code D and E aircraft will require maximum nose wheel steering during turn. If the Operators procedures do not permit this, contact Airport Operations for briefing.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Caution - Aerial activity takes place outside of aerodrome published hours.
b) Hangar 23 blocks a large section of Taxiway Alpha from the direct sight of ATC.
c) Runway 05 - possible turbulence in touch-down area.
d) Taxiway Alpha, please be aware of taxiing speeds, uncontrolled pedestrian crossings cross this taxiway.
e) Grass Taxiway November on the right after Holding Point Charlie obscured by holding point sign, follow lead-off line.
f) Possible glare from car park to the right of Runway 23 approach.
g) Aircraft Engine Ground Running Facility to the north of Runway 05/23. Beware strong up-draft up to 800 FT AGL when in use. Avoid flying overhead at all times. Use of the Engine Ground Running Facility by aircraft larger than a C-130 will have the activity promulgated by NOTAM.

5 HELICOPTER OPERATIONS

a) Mainly light helicopter training and corporate activity.
b) Daily Helimed Operations take place outside of aerodrome operating hours.

6 USE OF RUNWAYS

a) Arrival and Departure Restriction. No departures permitted below 400 M RVR.
b) The width at both ends of Runway 05/23 main is twice that delineated by the associated edge lights due to extra pavement at one side. Since runway centre-line lighting is not installed, pilots should ensure that they are correctly lined up, especially if take-off is at night or when the runway is contaminated or in low visibility.
c) Runway 23 Main, in the event of a go-around, conduct the go-around over the main runway avoiding flying over the dead side.

7 TRAINING

Not applicable.

EGSC AD 2.21 NOISE ABATEMENT PROCEDURES

1 Pilots using Cambridge Airport should at all times endeavour to ensure that aircraft are operated in a manner which causes least disturbance to inhabited areas in the vicinity; more specifically:

a) Except when taking off or landing, pilots should avoid flying below 2000 FT (Cambridge QNH) within 3 NM of Cambridge city;
b) Because of the close proximity of working accommodation, aircraft parked on the Airport terminal apron are not to have APUs running for more than 30 minutes before engine start. An environmental levy of £20 will be charged for every additional 15 minutes APU running time.

2 Aircraft may be permitted to make visual approaches. Visual approaches will not normally be permitted if the PAPI are unserviceable. All inbound wide-body aircraft should follow IFR

procedures.

3 VISUAL CIRCUIT HEIGHT

Unless otherwise instructed by Air Traffic Control the visual circuit height is 1500 FT for all multi-engined types, 1000 FT for other fixed-wing aircraft. All heights QFE.

4 ARRIVALS

a) Aircraft approaching asphalt Runway 05/23 without assistance from Radar (or ILS, Runway 23) shall follow a descent path from at least 1000 FT that is no lower than the normal approach path indicated by the PAPI.
b) All VFR aircraft experiencing radio fail to conduct a go around along the centreline of the duty runway and follow any light signals received from the tower. Avoid flying over the dead-side of the runway.

5 DEPARTURES

a) **Asphalt Runway 05**

i. The maximum take-off run available shall always be used by other than light types of aircraft. Light aircraft may start their take-off run from abeam Taxiway D or as instructed by ATC. Aircraft which require a left turn after departure shall avoid Cambridge City until at least 2000 FT AAL.
ii. Aircraft carrying out an Instrument Missed Approach Procedure shall maintain runway heading until at least 1600 FT AAL.
iii. Aircraft which require a right turn after departure and those remaining in the circuit shall, as soon as practicable, but not below 500 FT or within the aerodrome boundary, turn right, unless otherwise directed by ATC.

b) **Asphalt Runway 23**

i. Aircraft which require a right turn after departure shall maintain runway heading until at least 2000 FT AAL.
ii. Aircraft carrying out an Instrument Missed Approach Procedure shall maintain runway heading until at least 1600 FT AAL.
iii. Aircraft which require a left turn after departure and those remaining in the circuit shall, as soon as practicable, but not below 500 FT or within the aerodrome boundary, turn left, unless otherwise directed by ATC.

6 CIRCUIT DIRECTIONS

a) The following circuit directions will be adhered to:

Runway 23 - left hand;

Runway 05 - right hand.

7 The above procedures may be departed from at any time to the extent necessary for avoiding immediate danger.

8 REVERSE THRUST

The use of reverse thrust should be kept to a minimum commensurate with operational safety.

9 HELICOPTER OPERATIONS

Routeing to the aerodrome should avoid overflight of, or passing in close proximity to Cambridge City and surrounding villages.

EGSC AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT VIA THE AIRWAYS SYSTEM

a) Aircraft inbound via the airways system must follow the Stansted Standard Arrival Routes (STAR) as shown at AD 2-EGSS-7-STAR Charts.
b) Stansted Director will co-ordinate a level at the CAM NDB(L) and will issue the inbound aircraft with a clearance to leave controlled airspace.

2 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Preferred Departure Routes- via ATS Route Network

i. These routes do not constitute Standard Instrument Departures, are not assessed for obstacle clearance and are not contained within controlled airspace.
ii. These routes contain noise abatement requirements.
iii. These routes are subject to amendment by ATC.

iv. ADNAM and EBOTO are clearance limits. Pilots are to ensure that they have received and acknowledged an airways joining clearance before entering controlled airspace.
v. Pilots departing RWY23 to EBOTO are to ensure that they remain outside the limits of the London TMA to the Southwest of Cambridge in the horizontal and vertical planes (base 4500 FT-5500 FT) and if necessary step-climb to altitude 6000 FT.
vi. Aircraft departing towards ADNAM can expect to be tactically vectored onto their requested route.
vii. Pilots should be aware that IFR departure clearances are not normally available until the aircraft is taxiing for departure.
viii. Loss of communication procedure (outbound aircraft). Until a clearance to enter CAS has been received and acknowledged, pilots experiencing radio failure are expected to follow the RTF procedure for IFR aircraft outside controlled airspace (ENR 1.1.3 paragraph 3 refers).

Departure to	Airway Route	Via	Runway	Designator	Routing
East-southeast	L6, L9, L10, L608, L620, M189	ADNAM	23	ADNAM	Left turn on track ADNAM, climb to altitude 3000 FT (see note vi).
			05	ADNAM	Right turn on track ADNAM, climb to altitude 3000 FT (see note vi).
South, Southwest & West-northwest	N57, N601, N859, Q63, T420, Y321	EBOTO	23	EBOTO	Climb runway track to altitude 2000 FT, right turn on track EBOTO step-climb to altitude 6000 FT REMAIN OUTSIDE CAS (See note v).
			05	EBOTO	Left turn on track EBOTO, climb to altitude 6000 FT.

3 Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

EGSC AD 2.23 ADDITIONAL INFORMATION

a) Mode S Barometric Pressure Setting Data

London Terminal Control has the ability to downlink Mode S Barometric Pressure Setting (BPS) data. Therefore, if the downlinked pressure data is at variance with the BPS expected by Air Traffic Control, pilots can expect additional challenge. When Air Traffic Control pass a reminder of the appropriate BPS, it is anticipated that the aircrew will cross check the altimeter settings and confirm set.

b) Flight testing activity frequently undertaken at Cambridge. Testing may take place at short notice and some disruption can be expected.
c) When an aircraft is departing EGSC on an EBOTO, when the pressure is QNH 976 hPa or below, pilots may be issued a non-standard climb, as instructed by ATC.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL **979**
ELEVATIONS IN FEET AGL (801)

CAMBRIDGE

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **1600** in the sector defined by the lateral limits; 521457N 0000432W - 522155N 0000854E thence clockwise by an arc of a circle radius 8NM centred on 521548N 0001717E to 521625N 0003014E - 521456N 0001505E - 521046N 0000658E - 520341N 0001358E - 520245N 0001214E thence clockwise by an arc of a circle radius 8NM centred on 520852N 0000352E to 520130N 0000853E - thence anticlockwise by an arc of a circle radius 6NM centred on 515959N 0000029W - 520427N 0000659W thence clockwise by an arc of a circle radius 8NM centred on 520852N 0000352E - 520509N 0000737W thence anticlockwise by an arc of a circle radius 5NM centred on 520748N 0001430W - 521112N 0000833W thence clockwise by an arc of a circle radius 8NM centred on 520852N 0000352E - 521457N 0000432W;

b) **1900** in the sector defined by the lateral limits; 520427N 0000659W thence clockwise by an arc of a circle radius 6NM centred on 515959N 0000029W to 520130N 0000854E thence clockwise by an arc of a circle radius 8NM centred on 520852N 0000352E to 520427N 0000659W.

c) **2000** in the sector defined by the lateral limits; 521112N 0000833W thence clockwise by an arc of a circle radius 5NM centred on 520748N 0001430W to 520509N 0000737W thence clockwise by an arc of a circle radius 8NM centred on 520852N 0000352E to 521112N 0000833W.

d) **1700** in the sector defined by the lateral limits; 521046N 0000658E - 521456N 0001505E - 521625N 0003014E thence clockwise by an arc of a circle radius 8NM centred on 521548N 0001717E to 520941N 0002539E - 520341N 0001358E - 521046N 0000658E.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **NDB(L) CAM**†.

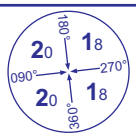
Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) CAM**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of **NDB(L) CAM**.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. The ATC Surveillance service is provided by Primary and/or Secondary Radar equipment.
7. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
8. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches Is cleared to Intercept the final approach track.**



CHANGE (6/26): LASER SITE REMOVED. MIL HELI SITE OAKINGTON & WATERBEACH REMOVED.

EGEC AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Not available to aircraft unable to communicate by radio.
b) Use of Campbeltown Aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.
c) Use of RNP procedures at this aerodrome restricted to Highlands and Islands Airports Ltd - Approved Operators only.
d) Use of this procedure is strictly PPR from the aerodrome operator.
e) Prior to commencing the procedure, pilots are to broadcast on AFIS 125.905 MHz with flight details and intentions.

2 GROUND MOVEMENT

a) Northern Taxiway unavailable at night, except in emergencies.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) No ground signals.
b) Bird activity may be seasonally high. From October until March, large flocks of geese are prevalent in the vicinity of the aerodrome, especially Runway 29 approach.
c) Deer activity may take place on the aerodrome, pilots will be advised of any hazard.
d) Perimeter fence obstruction at western end of Runway.
e) Pilots are reminded of the close proximity of disused parallel taxiway to the south of Runway 11/29, which is outside of the airport boundary fence and not available for landing/taxiing purposes.
f) Traffic carrying out RNP approaches to Runway 30 at Islay will pass approximately 2 NM North of Campbeltown RNP 11 Hold. Islay Airport is situated approximately 24 NM northwest of Campbeltown. Departures/arrivals may trigger TCAS warnings due to the close proximity of RNP and NDB/DME approaches. Pilots are reminded that Instrument Approach Procedures at Campbeltown are restricted to Highlands and Islands Airports Ltd - Approved Operators only.
g) Aircraft may be backtracking or taxiing the runway in use, after landing roll or for take-off.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Runway departure restriction for aircraft requiring the use of a licensed aerodrome:

i. **Runway 11/29:** Except where an AOC holder has a less restrictive State authorised take-off minima, departures when the reported MET visibility is 400 M or less are not permitted.

7 TRAINING

Not applicable

EGEC AD 2.21 NOISE ABATEMENT PROCEDURES

Not applicable

EGEC AD 2.22 FLIGHT PROCEDURES

1 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

EGEC AD 2.23 ADDITIONAL INFORMATION

Pilots are advised that they are responsible for their passengers and are to escort their passengers from the apron to the terminal building.

EGFF — CARDIFF

EGFF AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGFF — CARDIFF

EGFF AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 512348N Long: 0032036W Mid point of Runway 12/30
2	Direction and distance from city	8.5 NM SW of Cardiff.
3	Elevation / Reference temperature / Mean Low Temperature	220 FT / 18 °C / -
4	Geoid undulation at AD ELEV PSN	169 FT
5	Magnetic Variation / Annual Change	0.27°E (2027) / 0.18°E
6	AD Administration Address Telephone E-mail address Web address	CARDIFF INTERNATIONAL AIRPORT LTD. Cardiff International Airport, Rhoose, Barry, South Glamorgan CF62 3BD. 01446-711111 (Cardiff Airport Ltd) 01446-712562 (ATC) info@cwl.aero (CWL Aero) cardiffatc@nats.co.uk (ATC) www.cardiff-airport.com
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	Telephone calls to NATS Ltd operational areas may be recorded.

EGFF AD 2.3 OPERATIONAL HOURS

1	AD Administration	H24
2	Customs and immigration	H24
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	H24 See also AD 2.18.
8	Fuelling	H24
9	Handling	H24
10	Security	H24
11	De-icing	H24
12	Remarks	-

EGFF AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Forklifts, pallet trucks, cargo loader 12.5 tonnes capacity suitable for loading up to Boeing 747 main deck. One lower lobe cargo loader 5 tonnes capacity. 2 Cargo loaders.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL W80, W100.
3	Fuelling facilities/capacity	-
4	De-icing facilities	Upon request with Swissport.
5	Hangar space for visiting aircraft	Limited.
6	Repair facilities for visiting aircraft	Limited.

7	Remarks	Fuel AVTUR JET-A1 is available with Swissport, Tel: 07388-943688 or Global Trek Aviation, Tel: 01446-712699. Fuel AVGAS from Global Trek Aviation, Tel: 01446-712699. Handling is mandatory for all aircraft over 2000 KG MTOW: General Aviation Support (<2000 KG MTOW): 01446-712699; cwl@globaltrekaviation.com. Swissport (Commercial): Tel: 01446-712592. Signature (Executive, GA, Military and Cargo): 01446-712637. Global Trek Aviation (Executive, GA, Military and Cargo): 01446-712699. All departing aircraft are required to file a full or abbreviated flight plan electronically prior to departure. The addresses should be as per ENR 1.11.

EGFF AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotel 0.5 miles from the airport.
2	Restaurants	Licensed buffet and cafeteria in the terminal.
3	Transportation	Buses: Shuttle bus to the nearest railway station, Rhoose (Cardiff International Airport) 2 miles. Bus service into Cardiff every 20 minutes (every 30 minutes: 1 November until 31 March). Taxis and car hire.
4	Medical facilities	Limited first aid treatment.
5	Bank and Post Office	Bureau de Change. ATM Machine.
6	Tourist Office	Terminal Building.
7	Remarks	-

EGFF AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 RFF Category 8 and 9 available by prior arrangement.
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	Light aircraft can be removed using airport resources. Large aircraft can be removed using outside sources in conjunction with the aircraft operator.
4	Remarks	-

EGFF AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, chemical de-icing, chemical anti-icing.
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Anti-iced with KC Potassium acetate fluid.

EGFF AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	SOUTH MAINTENANCE AREA (SOUTH OF HOLD G) Surface: Asphalt PCR 210 F/A/X/T SOUTH MAINTENANCE AREA (WEST OF HOLD H) Surface: Asphalt PCR 150 F/A/X/T TERMINAL AREA Surface: Concrete PCR 520 R/B/W/U
2	Taxiway width, surface and strength	Taxiway A: 23 M Surface: Asphalt PCR 490 F/B/X/U

		Taxiway B: 23 M Surface: Asphalt PCR 490 F/B/X/U Taxiway C: 23 M Surface: Asphalt PCR 400 F/B/X/U Taxiway D: 23 M Surface: Asphalt PCR 400 F/B/X/U Taxiway E: 43 M Surface: Asphalt PCR 400 F/B/X/U Taxiway G (N OF HOLD G): 43 M Surface: Asphalt PCR 580 F/A/X/T Taxiway H (E OF HOLD H): 18 M Surface: Asphalt PCR 320 F/A/X/U Taxiway J: - Surface: Concrete PCR 520 R/B/W/U
3	Altimeter checkpoint location and elevation	Stands 1-10: 207-211 FT; Stands 11-17: 212-215 FT AMSL.
4	VOR checkpoints	-
5	INS checkpoints	INS Checkpoints: See Aircraft Parking/Docking Chart.
6	Remarks	-

EGFF AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1-9 and 11-17 parking with marshaller guidance. Stand 10 parking with Safedock 2-18 system. Stands 7 and 9 fitted with driveable type airbridges.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 12/30: Runway designation, runway threshold. Runway centre-line, fixed distance marking. Touchdown zone and aiming point markings. Runway guard lights are positioned at Holding Points A1, A2, B1, B2, C, D, E1, G and H. Taxiway light(s): Centre-line (green) on taxiway serving 12/30, blue edge lights/markers at junctions.
3	Stop bars and runway guard lights (if any)	Red stop bars in use H24. Enhanced taxiway markings associated with all red stop bars. Red stop bars and signs showing holding point numbers at all holding points. Holding points A1 and B1 have no red stop bar and should not be used.
4	Other runway protection measures	-
5	Remarks	Minimum power to achieve forward movement should be applied to move off all stands. All holding position signs are black on yellow positioned to the left hand side of the taxiway. There are 2 LGTD WDI to the south of Runway 12/30, adjacent to the runway threshold markings. 512400.40N 0032132.16W - 512333.12N 0032010.42W. Aircraft and vehicles must not cross an illuminated red stop bar, even if receipt of a clearance from ATC. Red stop bars will only be deselected by ATC upon receipt of a correct clearance readback from the pilot or driver. Aircraft requiring pushback from Stands 12-17 can expect to be pushed back into the cul-de-sac and to be towed forward to a position abeam Stands 12-17. Engines are not to be started until abeam Stand 12 for jet blast protection.

EGFF AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGFF AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	MET OFFICE EXETER
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	MET OFFICE EXETER 24 Hours
4	Trend forecast Interval of issuance	-
5	Briefing/consultation provided	Self briefing/Telephone.
6	Flight documentation Language(s) used	Charts abbreviated plain language text. TAFs/METARs. English.
7	Charts and other information available for briefing or consultation	METFORM 214-215, H24 Mean Sea Level Pressure Forecast, EUR SIGWX, Upperwind/Temps, AIRMET Southern, AIRMET Northern, AIRMET Scottish.
8	Supplementary equipment available for providing information	METAR available during aerodrome operating hours, unverified AUTO METAR available when closed. ATIS available on 132.480 MHz.
9	ATS units provided with information	CARDIFF
10	Additional information (limitation of service, etc.)	-

EGFF AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Cardiff CTR.
b) Use by aircraft not able to communicate with ATC by radio is subject to prior permission.
c) Terms and conditions of use of aerodrome available from Airport Operations Director.
d) All flights, except General Aviation and Military flights, are subject to the prior approval of the Managing Director, Cardiff Airport Ltd and prior notification to Airport Co-ordination Ltd, who act as an agent for the airport. Requests for ad-hoc slot allocations should be made to ACL during working hours Mon-Fri 0830-1700 (0730-1600) by SITA: LONACXH; e-mail: lonacxh@acl-uk.org; or Tel: +44(0)161-4931850, Fax: +44(0)161-4931853. OCS account holders can add, change and cancel slots at any time on the online co-ordination portal: https://www.online-coordination.com/default.aspx?AspxAutoDetectCookieSupport=1.
e) High-visibility clothing MUST be worn airside.

2 GROUND MOVEMENT

a) Departing aircraft on first contact with Cardiff ATC must state aircraft type, stand number and the code letter of the latest ATIS received. Pilots of departing aircraft are reminded to contact Cardiff Tower for clearance 10 minutes before start up.
b) One way traffic flow system Southside using Holding Points G and H.

   i. Access through Holding Points G and H is restricted to one aircraft movement at a time.
   ii. When Runway 30 is the notified runway in use aircraft will line up via Holding Point H and vacate though Holding Point G unless otherwise instructed by ATC.
   iii. When Runway 12 is the notified runway in use aircraft will line up via Holding Point G and vacate via Holding Point H unless otherwise instructed by ATC.
   iv. During Low Visibility Procedures access to and from the runway via Holding Point G requires a follow-me vehicle.

c) Taxiway Charlie must not be used by code ‘D’, ‘E’ or ‘F’ aircraft to enter or vacate the runway with the exception of the B757 and B767 series aircraft.
d) Aircraft Code ‘D’, ‘E’ or ‘F’ cannot make turns from Holding Point D onto the runway towards the Runway 30 threshold and vice versa.
e) Aircraft Code ‘D’, ‘E’ or ‘F’ cannot make turns from Holding Point E1 in a westerly direction onto Taxiway B and vice versa with the exception of the B757 and B767 series aircraft.

3 CAT II/III OPERATIONS

a) Cardiff Airport is not equipped for CAT II/III operations, however Low Visibility Procedures are used to protect CAT I operations.
b) Low Visibility Procedures will commence when RVR/MET visibility falls to 800 M or less. This will be reported by ATIS or RTF.
c) Pilots will be informed when these procedures are in operation by ATIS or by RTF.

4 WARNINGS

a) Pilots are reminded of the close proximity of St Athan aerodrome to the west north west of Cardiff aerodrome, see AD 2.22 paragraphs 1 and 8.
b) Pilots are warned, when landing on Runway 30 in strong west to south westerly winds, of the possibility of terrain induced turbulence on short finals.
c) Due to possibility of turbulence caused by hangar north east of Runway 12 threshold, caution should be exercised during periods of strong north westerly to north easterly winds.
d) Grass cutting takes place May-Oct.
e) Single-engined aircraft should avoid overflying the chemical complex at Barry.
f) Red Stop Bars in operation H24.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Circuit direction is normally to the north.
b) In accordance with EU OPS Subpart E, the following approach operations are available to approved operators:

   i. Runway 12 is suitable for lower than Standard Category I operations supported by an ILS Classification of I/T/4, when the IRVR is not less than 450 M.
   ii. Runway 30 is suitable for lower than Standard Category I operations supported by an ILS Classification of I/T/4, when the IRVR is not less than 450 M.

7 TRAINING

a) All IFR training in Cardiff CTR/CTA subject to PPR from Cardiff Approach https://instrumenttraining.as.me/.
b) All aircraft wishing to carry out instrument training within the Cardiff Zone, must have a functioning transponder with Mode C.

EGFF AD 2.21 NOISE ABATEMENT PROCEDURES

a) Every operator of aircraft using the airport shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.
b) The Noise Preferential Routeings (NPR) given below are compatible with ATC requirements and shall apply in both VMC and IMC. The tracks are to be flown by all departing jet aircraft and by all other aircraft with a maximum certificated weight exceeding 5700 kg unless otherwise instructed by ATC or unless deviations are required in the interests of safety.

   The NPRs are incorporated in ATC Standard Instrument Departure procedures (SIDs)

Take-Off Runway	NPR
12	North: Climb straight ahead to 4.5 nm DME before turning left South: Climb straight ahead to 2 nm DME before turning right
30	Climb straight ahead to 4nm before turning either left or right

   The obligations of the NPRs cease when an altitude of 3000 ft QNH or above has been reached.

c) **Continuous Descent Approaches**

   Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a continuous descent profile, when appropriate. ATC will advise pilots of an estimate of the track distance to run to touchdown as soon as possible after first call on the approach frequency.

d) In the interest of noise abatement, restrictions are imposed on the ground running of engines between 2230-0730 (2130-0630) and operators are advised to contact the Airport Operations Director for details.
e) The use of reverse thrust, particularly after 2130 (2030), is to be kept to a minimum consistent with operational needs.

EGFF AD 2.22 FLIGHT PROCEDURES

1 GENERAL INFORMATION

a) The attention of pilots of aircraft inbound to Runway 12 or outbound from Runway 30 at Cardiff Airport is drawn to the close proximity of St Athan aerodrome and the St Athan Local Flying Zone (see paragraph 8) to the Cardiff arrival/departure tracks. Pilots of VFR aircraft to/from Cardiff Airport may be required by Cardiff ATC to enter/leave the CTR at Visual Reference Points which avoid the St Athan Local Flying Zone.

b) Additionally, St Athan based aircraft may carry out aerobatic manoeuvres and other unusual activities above, within and below the western part of the Cardiff CTA. Pilots transitting above or below the CTA are strongly recommended to contact Cardiff Approach Control for appropriate traffic information.

2 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Arrival Routes (STAR) for aircraft inbound from the UK ATS Route network are detailed at AD 2-EGFF-7.
b) Inbound Procedures other than from the ATS Route network:

i. Inbound aircraft other than from the ATS Route network should request clearance to enter the Cardiff CTR/CTA at least 10 minutes from the CTR/CTA boundary and must observe the normal procedure for joining controlled airspace.
ii. VFR flights and flights requesting Special VFR clearance will normally be instructed to route via one of the Visual Reference Points as detailed at paragraph 7.

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Aircraft outbound via the UK ATS Route network. Standard Instrument Departures (SID) for aircraft outbound from the UK ATS Route network are detailed at AD 2-EGFF-6-1 to 6-3.

4 AIRCRAFT OUTBOUND TO THE FIR

a) IFR flights wishing to leave the Cardiff CTR/CTA to enter the London FIR will be cleared by the most direct route consistent with the current traffic situation.
b) VFR flights and flights requesting Special VFR clearance will normally be instructed to route via one of the Visual Reference Points as detailed at paragraph 7.

5 HOLDING

Holding Point	Details
Cardiff NDB CDF	Inbound track 297° MAG - turning left at the facility. Lowest holding altitude 2500 FT

6 RADIO COMMUNICATION FAILURE PROCEDURES

a) In the event of complete radio communications failure in an aircraft, the pilot will adopt the appropriate procedure described at ENR 1.1.3. The route to be used when leaving the Zone in accordance with this procedure is as follows:

Position at time of decision	Route
NDB CDF	Track 040°T at 2500 FT ALT.

7 VISUAL REFERENCE POINTS (VRP)

a) Pilots are advised to use caution when routeing via the St Hilary TV Mast and Wenvoe TV Mast VRPs as they are Air Navigation Obstacles with high elevation – See ENR 5.4 dataset for up to date details of ICAO AREA 1 Obstacles.
b) Pilots are advised to use caution when routing via the Cardiff Docks VRP due to its proximity to Cardiff Heliport.
c) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

8 ST ATHAN AERODROME - LOCAL FLYING ZONE AND PROCEDURES

a) St Athan aerodrome lies within the Cardiff CTR/CTA to the west of Cardiff. By arrangement with Cardiff ATC during the hours of watch of St Athan ATC (normally 0830-1700 (0730-1600)), and subject to the conditions detailed in paragraph (b) flights by St Athan based aircraft may take place in VMC, without reference to Cardiff ATC, within a Local Flying Zone (LFZ) bounded by the following positions:

512524N 0033307W - 512456N 0032523W - 512406N 0032302W - 512247N 0032302W - 512124N 0033042W - 512209N 0033306W thence clockwise by the arc of a circle radius 8 NM centred on 512348N 0032036W from 512209N 0033306W to 512524N 0033307W.
b) The following conditions apply to aircraft operating within the St Athan Local Flying Zone:

i. Aircraft are to be in communication with and comply with instructions from St Athan ATC;
ii. All aircraft conduct their flights within the weather criteria specified for VFR flights within Class D Airspace;
iii. Maximum altitude 1700 FT (Cardiff QNH);
iv. Pilots operating in the St Athan LFZ are responsible for maintaining their own visual separation from other aircraft, including aircraft on final approach to Runway 12 and departing from Runway 30 at Cardiff, which are in close proximity to the Local Flying Zone. (Traffic information will be passed by St Athan ATC).

c) Flights to/from St Athan ATC which are unable to comply with the requirements of the St Athan Local Flying Zone will be subject to individual clearance from Cardiff ATC and will be fully in tegrated with Cardiff arriving/departing traffic.
d) Visual approaches to Cardiff Runway 12 are unavailable when the Local Flying Zone is active.
e) All VFR flight is expected to comply with the following published VFR routes:

i. Departure Routes

Designator	Runway	Route	Maximum Altitude
East	07/25	Aircraft remain west of Aberthaw power station over water, clearance limit Aberthaw power station, then as directed by Cardiff Tower.	1500 FT
South	07/25	Aircraft remain west of the quarry and leave CAS towards Minehead VRP.	1500 FT
Nash Point	07/25	Aircraft remain within the confines of the LFZ and leave CAS to the west towards Nash Point VRP.	1500 FT
North	07/25	Leave CAS between the St Hilary and Wenvoe TV Masts.	1500 FT

Note 1: *Pilots who wish to operate above the 'maximum altitude' shall request this once airborne.*

Note 2: *All routes are available Special VFR subject to ATC clearance.*

Note 3: *Pilots can expect to receive a clearance in the format "{Callsign}, cleared to leave controlled airspace on a published {designator} departure, not above {altitude restriction} {QNH} VFR, {Squawk}.". A complete read-back is required.*

ii. Arrival Routes

Designator	Runway	Route	Maximum Altitude
East	07/25	From the northeast, route as directed by Cardiff Tower to hold east of Aberthaw power station and as directed by St Athan ATC.	1500 FT
South	07/25	Enter CAS from the south, remain west of the quarry and as directed by St Athan ATC.	1500 FT
Nash Point	07/25	Enter CAS via Nash Point, route eastbound along the coast over water, then as directed by St Athan ATC.	1500 FT
North Arrival	07/25	Enter CAS towards the St Hilary VRP to orbit and remain north of the mast, then as directed by Cardiff Tower.	1500 FT
Straight In	07/25	Enter CAS to position straight in for the runway in use.	Subject to co-ordination

Note 1: *Pilots who wish to operate above the 'maximum altitude' shall request this.*

Note 2: *All routes are available Special VFR subject to ATC clearance.*

Note 3: *Pilots can expect to receive a clearance in the format: "{Callsign}, cleared to enter controlled airspace on a published {designator} arrival, not above {altitude restriction} {QNH} VFR.". A complete read-back is required.*

9 SPECIAL VFR CLEARANCES

Special VFR Clearances for flights within the Cardiff CTR may be requested and will be given whenever traffic conditions permit. These flights are subject to the general conditions laid down for Special VFR flights and will normally only apply to aircraft which carry RTF including the appropriate frequencies.

10 VFR FLIGHTS

VFR clearance in the Cardiff CTR will be given for flights operating in VMC. Routeing instructions and/or altitude restrictions may be specified in order to integrate VFR flights with other traffic. Pilots are reminded of the requirements to remain in VMC at all times and to comply with the relevant parts of the Low Flying Rules, and must advise ATC if at any time they are unable to comply with the clearance instructions issued.

11 VFR ROUTES TO/FROM CARDIFF

a) In order to integrate VFR flights to/from Cardiff with the normal flow of IFR traffic, a number of published VFR routes are established along which ATC VFR clearances will be issued subject to the conditions specified in paragraph 9. These routes are determined by prominent ground features and are detailed in the following tables.
b) In order to reduce RTF congestion, the published outbound and inbound visual routes are allocated route designators. Pilots are to ensure that they are familiar with the route alignment. Level instructions will be passed with the appropriate ATC VFR clearance.

Published Outbound Visual Routes

Route Designator	Exit Point	RWY	Route	Maximum Altitude	Remarks
VFR St Hilary	Bridgend	30/12	Route north of St Hilary TV Mast and leave CAS to the west routing north of Bridgend at Junction 36 VRP.	1500 FT	
VFR North	North	30/12	Route between the St Hilary and Wenvoe TV masts and leave CAS to the north.	1500 FT	
VFR Wenvoe	W Cardiff Docks	30/12	Route east if the Wenvoe TV masts and leave CAS to the northeast.	1500 FT	

Route Designator	Exit Point	RWY	Route	Maximum Altitude	Remarks
VFR Flat Holm	NE Flat Holm Lighthouse	30/12	Route north of Barry then north of Flat Holm Island, and leave CAS at the east/southeast zone boundary.	1500 FT	
VFR South	N Minehead	30	Route east of the quarry (1 NM west of Cardiff airport) and leave CAS to the south towards Minehead VRP.	1500 FT	Cardiff will endeavour to remove the 1500 FT restriction for flight over water ASAP.
VFR South	N Minehead	12	Route south and leave CAS to the south towards Minehead VRP.	1500 FT	Cardiff will endeavour to remove the 1500 FT restriction for flight over water ASAP.
VFR Nash Point	Nash Point	30	Route east of the quarry (1 NM west of Cardiff airport) and leave CAS to the west along the coast, over water, via Nash Point.	1500 FT	Route normally only available when St Athan is not active.
VFR Nash Point	Nash Point	12	Leave CAS to the west along the coast, over water, via Nash Point.	1500 FT	Route normally only available when St Athan is not active.
VFR Watchet	Watchet Harbour VRP	30	Route east of the quarry (1 NM west of Cardiff airport) and leave CAS to the south east via Watchet Harbour VRP.	1500 FT	Cardiff will endeavour to remove the 1500 FT restriction for flight over water ASAP.
VFR Watchet	Watchet Harbour VRP	12	Route south east and leave CAS to the south east via Watchet Harbour VRP.	1500 FT	Cardiff will endeavour to remove the 1500 FT restriction for flight over water ASAP.

Published Inbound Visual Routes

Route Designator	Entry Point	RWY	Route	Maximum Altitude	Remarks
VFR St Hilary	Bridgend	30/12	Enter CAS via Bridgend and route north of St Hilary TV Mast, then as directed by Cardiff ATC.	1500 FT	
VFR North	North	30/12	Enter Cardiff CAS from the north between the St Hilary and Wenvoe TV Masts, then as directed by Cardiff ATC.	1500 FT	
VFR Wenvoe	W Cardiff Docks	30/12	Enter Cardiff CAS via the Wenvoe TV mast, then as directed by Cardiff ATC.	1500 FT	
VFR Cardiff Docks	Cardiff Docks	30/12	Enter Cardiff CAS via Cardiff Docks, then as directed by Cardiff ATC.	1500 FT	
VFR Flat Holm	N of Flat Holm Lighthouse	30/12	Enter Cardiff CAS via Weston aerodrome, route north of Flat Holm Lighthouse towards Laverrnock Point, then as directed by Cardiff ATC.	1500 FT	
VFR South	N Minehead	30	Enter Cardiff CAS to the south, then as directed by Cardiff ATC.	1500 FT	
VFR South	N Minehead	12	Enter Cardiff CAS from the south, remaining east of the quarry (1 NM west of Cardiff airport) then as directed by Cardiff ATC.	1500 FT	
VFR Nash Point	Nash Point	30	Enter Cardiff CAS via Nash Point, route along the coast, remaining over water, then as directed by Cardiff ATC.	1500 FT	Route normally only available when St Athan is not active.
VFR Nash Point	Nash Point	12	Enter Cardiff CAS via Nash Point, route along the coast, remaining over water and east of the quarry (1 NM west Cardiff airport), then as directed by Cardiff ATC.	1500 FT	Route normally only available when St Athan is not active.
VFR Watchet	Watchet Harbour VRP	30	Enter Cardiff CAS from the south east, then as directed by Cardiff ATC.	1500 FT	
VFR Watchet	Watchet Harbour VRP	12	Enter Cardiff CAS from the south east, remaining east of the quarry (1 NM west of Cardiff airport) then as directed by Cardiff ATC.	1500 FT	

12 CARDIFF CITY HELIPORT (EGFC)

a) **Landing and Taking Off Within Congested Areas**

i. When a landing or take-off is intended at Cardiff Heliport, which is situated within a congested area, compliance with the following procedures is required under the Standardised European Rules of the Air SERA.3105 Minimum Heights and as notified under Rules of the Air Regulations 2015 Rule 5(1)(a).
ii. Notified Procedures:

1. Landing and take-off shall only be performed with the permission of the person in charge of the aerodrome;
2. Except when necessary for take-off or landing at the aerodrome, aircraft shall not be flown over the congested area unless at such a height as will permit, in the event of an emergency arising, including a critical engine failure, a landing to be made without undue hazard to persons or property on the surface. This height shall be at least 300 M (1000 FT) above the highest obstacle within a radius of 600 M from the aircraft; and
3. Approach and departure shall be made over clear areas so that a safe forced landing can be achieved in the event of engine failure.

b) **Use Requirements**

Use of Cardiff City Heliport is subject to a strict PPR policy. A Full briefing pack must be downloaded from www.cardiffheliport.com prior to landing at the Heliport.

c) **Controlled Airspace**

Permission to operate at Cardiff City Heliport does not constitute permission to enter controlled airspace. The controlling authority of the relevant controlled airspace shall be contacted in accordance with standard airspace procedures.

13 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside the Cardiff controlled airspace within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Cardiff Approach frequency, 119.155 MHz, are encouraged to select SSR code 3636.

515324N 0032556W - 515122N 0031317W -
515034N 0030532W - 513945N 0024042W -
512715N 0030058W - 512349N 0030302W -
510900N 0030300W - 510306N 0030723W -
505955N 0031044W - 510140N 0033616W -
512432N 0034819W - 515324N 0032556W.

b) Selection of 3636 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Cardiff controlled airspace at all times.
c) Whilst squawking 3636, pilots should be aware that Cardiff Approach may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 3636 shall be deselected.

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2500** in the sector defined by the lateral limits; 513039N 0035438W - 513302N 0032847W - 513655N 0030733W - 512913N 0030413W - 512416N 0031053W thence clockwise by an arc of a circle radius 5NM centred on 512734N 0031654W to 512241N 0031835W - 512715N 0035305W - 513039N 0035438W.

b) **1900** in the sector defined by the lateral limits; 512715N 0035305W - 512241N 0031835W thence anticlockwise by an arc of a circle radius 5NM centred on 512734N 0031654W to 512416N 0031053W - 512913N 0030413W - 512435N 0030213W thence clockwise by an arc of a circle radius 9NM centred on 512224N 0031610W to 511348N 0032026W - 512111N 0035021W - 512715N 0035305W.

NOTE: Radar headings will be allocated so as to avoid Danger Area D119 when active.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher to **NDB(L) CDF**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) CDF**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (12/26): CARDIFF HELIPORT REVISED.

EGLJ AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Operations may occur H24 seven days a week.
b) Take-offs, landing and taxiing on grass are prohibited due to variable positioning of obstructions.
c) Overflight of hangar and associated buildings prohibited below 1000 FT AGL.

2 GROUND MOVEMENT

Not applicable

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Testing of ejection seats can occur at any time from the ground up to 600 FT AGL and are divided into the following categories:

i. Seat tests from the centre of Chalgrove aerodrome up to heights of 600 FT AGL;
ii. Inflight tests from a Meteor aircraft carried out at ground level on Runway 12/30 at speeds between 60 to 130 KT;
iii. Inflight tests from a Meteor aircraft above Runway 06/24 take place at heights between 250 to 1000 FT AGL at speeds up to 450 KT;
iv. Parachute drop tests are conducted from helicopters up to 5500 FT AGL overhead Chalgrove.

b) The aerodrome is encompassed by the Benson MATZ.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

Not applicable

7 TRAINING

Not applicable

EGLJ AD 2.21 NOISE ABATEMENT PROCEDURES

a) No take-offs from Runway 18 to avoid noise over Chalgrove Village.

EGLJ AD 2.22 FLIGHT PROCEDURES

a) Pilots shall contact RAF Benson on channel 120.905 for a MATZ crossing service, and for landing/departures at Chalgrove.
b) Circuit directions: To the north at 1000 FT.

EGHR AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) All aircraft using Chichester/Goodwood are required to have third party insurance cover of not less than £1,000,000.
b) No helicopter circuit flying on Sundays.
c) No fixed-wing circuit flying on Sundays after 1400 (1300).
d) Helicopters must not taxi across the road between the tower and the fire station. Helicopters taxiing from the helicopter parking area shall taxi to the west of the tower.
e) Goodwood is a regulated aerodrome pursuant to the provisions of the UK Customs and Excise Management Act 1979. Goodwood Aerodrome is not designated as a Customs & Excise airport but operates under a Certificate of Agreement issued by UK Border Force. Subject to compliance with the provisions of the UK General Aviation Report (GAR) process, flights by general aviation aircraft may enter and depart the UK via Goodwood Aerodrome, except for those aircraft that are being imported, either temporarily or permanently, from a state that is outside the Common Travel Area, in which case they must first enter and, if temporarily imported, leave the UK via a designated customs airport.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) When Runways 06/24 and 10/28 are in use for fixed-wing circuits, opposite direction helicopter circuits will be flown from the threshold of Runway 32.
b) The Motor Racing track on the perimeter of the aerodrome is in constant use during daylight hours. It is not to be used for the taxiing of aircraft at any time.
c) A runway starter extension is available on Runway 32 to correctly indicate the start of TORA/TODA/ASDA. Aircraft using the starter extension with a wingspan greater than 16 M are to coordinate the departure with ATS.
d) Pilots may experience windshear on Runways 06 and 24 particularly in strong southwesterly wind conditions.
e) Increased bird activity may be present on the airfield outside of normal operating hours. Pilots operating with an authorised out of hours approval should exercise caution.
f) Grass cutting may take place outside of published operating hours. Pilots operating with an authorised out of hours approval should exercise caution.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

Not applicable.

EGHR AD 2.21 NOISE ABATEMENT PROCEDURES

a) Runway 06

Landing: No low approaches over the built-up areas in the undershoot.

b) Runway 24

Take off: Turn right as soon as practicable to do so and establish a westerly track. Maintain track until west of built-up areas. If remaining in the circuit, ensure that crosswind and downwind track is west/northwest of Lavant village. No practice engine failures are permitted until west of the A286, Lavant Road. No low level circuits are permitted on Runway 24. Avoid overflight of Lavant village.

c) Runway 14

i. Take-off: Turn left 10° at the upwind end of Runway 14 to avoid overflying the school and fields of horses under the climb out path. No practice engine failures after take-off until well clear of the school and houses. Do not exceed the 10° left turn to avoid conflicting with the helicopter circuit.
ii. Landing: No low approaches over East Lavant village.

d) Runway 32

Take-off: Turn right 10° at the upwind end of Runway 32 to avoid East Lavant village. Maintain that heading until well beyond the village. No practice engine failures after take-off until well beyond East Lavant village. Do not exceed the 10° right turn to avoid conflicting with the helicopter circuit.

e) Runway 10

Take-off: Turn left 10° at the upwind end of the runway to avoid overflying Westerton village.

f) Runway 28

Take-off: Turn left 10° at the upwind end of the runway to avoid overflying Lavant village.

g) Helicopter Procedures

i. Helicopters are to avoid routeing over Chichester, Westerton and Summersdale.
ii. The southern helicopter circuit shall be flown when Runways 06, 10, 24 and 28 are in use. See AD 2-EGHR-4-1.
iii. The northern helicopter circuit shall be flown when Runways 14 and 32 are in use. See AD 2-EGHR-4-1.

EGHR AD 2.22 FLIGHT PROCEDURES

a) Fixed-wing circuit height is 1200 FT QFE unless otherwise directed by ATS. Do not descend below published circuit height when helicopter circuits are active.
b) Fixed-wing circuit joins on a left base leg for Runways 24 and 32 are not permitted.
c) Requests for low level/bad weather training circuits (ie below published circuit height) on Runways 14 and 32 must be pre-agreed with ATS prior to the commencement of the training detail, and are not permitted at any time whilst the helicopter circuits are active.
d) Fixed-wing glide approaches for Runways 14 and 32 are not permitted at any time whilst the northern helicopter circuit is active.
e) Orbits by fixed-wing aircraft are only to be flown on the outside of the circuit, ie on a right-hand circuit an orbit will only be flown to the left and vice versa for a left-hand circuit.
f) Circuit directions: Runways 06, 10 and 14 - LH; Runway 24, 28 and 32 - RH, or as directed by ATS.
g) Fixed-wing standard join is overhead at 2000 FT QFE. ‘Straight-in’ and ‘base’ joins are strongly discouraged when the circuit is active. ATS can advise on circuit status. Outside of published ATS hours, an overhead join is mandatory with circuits flown at published height.
h) Helicopter circuit height 800 FT or as advised by ATS. Helicopters are not permitted to join the circuit below 800 FT QFE unless weather dictates a lower height and only then when this has been pre-agreed with ATS.
i) Helicopter circuit: When Runways 14 or 32 are in use by fixed-wing, the helicopter circuit is flown from the ‘triangle’ east of the intersection with Runways 14/32 and 06/24, inside of and below the fixed-wing circuit height. When other runways are in use by fixed-wing, helicopter circuits are flown from the threshold of Runway 32, in the opposite direction to the fixed-wing circuit.

j) Helicopter and fixed-wing training flights are prohibited outside of published operating hours and at other times detailed in AD 2.20 paragraphs 1b and 1c.
k) Fixed-wing aircraft are to ensure that the take-off roll starts at the published start of TORA/TODA/ASDA on all runways in the interests of local community noise reduction.

EGEL AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Non radio aircraft must obtain PPR via telephone with Oban Airport Administration prior to flight, Tel. 01631-572910.
b) High visibility jackets mandatory whilst airside.
c) Aircraft that do not require the use of a licensed aerodrome and that wish to operate outside the notified hours of operation must comply with the Argyll and Bute Council Out of Hours Indemnity Scheme. PPR applies to all out of hours flights. Details of the scheme and an application form can be found at: www.obanandtheislesairports.com. Pilot information can be obtained from Oban Airport, Tel: 01631-572910.

2 GROUND MOVEMENT

a) Aircrew are advised to use minimum suitable power whilst manoeuvring on the Apron, as the front of the terminal building and personnel can be subject to prop wash.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Concentrations of Greylag Geese on and around the aerodrome throughout the year.

EGEY AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Non radio aircraft must obtain PPR via telephone with Oban Airport Administration prior to flight, Tel. 01631-572910.
b) High visibility jackets mandatory whilst airside.
c) Aircraft that do not require the use of a licensed aerodrome and that wish to operate outside the notified hours of operation must comply with the Argyll and Bute Council Out of Hours Indemnity Scheme. PPR applies to all out of hours flights. Details of the scheme and an application form can be found at: www.obanandtheislesairports.com. Pilot information can be obtained from Oban Airport, Tel: 01631-572910.

2 GROUND MOVEMENT

a) Aircrew are advised to use minimum suitable power whilst manoeuvring on the Apron, as the front of the terminal building and personnel can be subject to prop wash.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Avoid overflying bird sanctuaries which extend along the coast to the north of aerodrome.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

Not applicable

7 TRAINING

a) The use of the airport for training purposes is subject to prior arrangement with Oban Airport Administration, Tel. 01631-572910.

EGHA AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) No domestic pets or animals allowed airside, with the exception of dogs, on leads, accompanied by resident or visiting pilots.
b) No formation flights within ATZ without prior permission of Airfield Management.
c) Outside of published hours of watch, only based aircraft and those pre-booked for the onsite engineer are permitted to use the airfield. All these flights must be notified, prior to time, as per Flying Order Book.

2 GROUND MOVEMENT

a) Due to prop-wash do not park aircraft facing north in front of the buildings.
b) Please respect grass surfaces, particularly in wet conditions. If landing long please consider another approach in order to avoid excessive braking which can cause the grass surface to be badly damaged.
c) Do not park in front of Poly-tunnel Hangars.
d) Do not use excessive power or conduct power checks on the refuelling apron, or in front of buildings or hangars.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) The ground to the north of the runway has a steep slope gradient.
b) Trees along the southern aerodrome boundary will cause turbulence on the approach to Runway 08 and 26 when the wind has a southerly component.
c) Multiple trees penetrate the Approach and Take-Off Surfaces by as much as 23 FT. Multiple trees penetrate the Transitional Surface to south west of the runway by as much as 31 FT.
d) Beacon with strobe in Southern Transition Surface penetrates surface by 9 FT.
e) Check for any aerobatic, Warbird operations, or other specialist flying activity within the ATZ prior to arrival.
f) Public footpath crosses the under/overshoot to the east of Runway 26 threshold aligned in a north/south direction.

g) Do not carry out Orbits, within the Circuit, for spacing or any other purpose.

5 HELICOPTER OPERATIONS

a) Join long final (5 miles) for designated runway, giving way to any established circuit traffic. Parking area to the south east of the aerodrome.

6 USE OF RUNWAYS

a) Aircraft to clear left after landing on Runway 26 and right after landing on Runway 08.
b) The Runway 08/26 QDM markers are located before the start of the runway.
c) Do not confuse runway edge lines with a runway centre-line. There is no runway centre-line.

7 TRAINING

a) No training on the airfield without permission of management.

EGHA AD 2.21 NOISE ABATEMENT PROCEDURES

a) Departure.

i. Runway 08 - At end of runway (not before), turn left in order to avoid Hatts Barn Farm.
ii. Runway 26 - At end of runway (not before), turn right, in order to avoid Compton Abbas village, tracking over the crest of Melbury Hill.

EGHA AD 2.22 FLIGHT PROCEDURES

a) Circuit directions: Runway 26 - RH; Runway 08 - LH.
b) All traffic to join overhead or dead-side descending to 1800 FT QNH to cross the upwind runway numbers. All circuits to the north. Circuit altitude 1800 FT QNH. QFE available on request.

EGHA AD 2.23 ADDITIONAL INFORMATION

a) Standard overhead and dead-side joins suspended on published days of Warbird Operations. See website and NOTAM.

EGTC AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use of this airport is subject to the published schedule of fees, charges and conditions, copies of which are available from Airport Operations - airportops@cranfield.ac.uk.

b) Cranfield is strictly PPR and does not accept diversions or nominations as a flight plan alternate aerodrome without approval from the Aerodrome Authority via atc@cranfield.ac.uk, 01234-750005 (2699 KG MTOW and below) or airporthandling@cranfield.ac.uk, 01234-758114 (2700 KG MTOW and above).
All aircraft 2699 KG MTOW and below are required to request PPR from ATC via telephone 01234-750005 or email atc@cranfield.ac.uk.
All aircraft 2700 KG MTOW and above and NOT conducting circuit or instrument training are required to request PPR via airporthandling@cranfield.ac.uk.
c) Permission to use the airport, either to land or depart, may be withdrawn without notice. Withdrawal of permission may occur due to prevailing weather conditions, if it is considered that the requirements of the airport's Safety Management System cannot be met.
d) The carriage of Dangerous Goods, as specified by The Air Navigation (Dangerous Goods) Regulations 2002, is prohibited unless written approval has been issued by the Airport Director.
e) All aircraft with the intention to depart or to taxi for engineering purposes are required to obtain start approval from ATC before starting engines.
f) Use of the airport by non-radio equipped aircraft **is not** permitted.
g) Use of the airport by training flights is subject to compliance with the requirements set out below.
h) While airside, each aircraft commander is responsible for the safety of his passengers and other crew members. Passengers are at all times to be escorted by the aircraft commander or a crew member who is known to be competent to ensure both his/her and the passengers safety. The wearing of high visibility clothing is required.
i) Aircraft commanders or crew members, as applicable, are responsible for ensuring that a total ban on smoking while airside is observed.

2 GROUND MOVEMENT

a) Extreme caution is necessary on paved and unpaved apron areas where surface markings may not always be available to ensure obstacle clearance from parked aircraft.
b) Due to limited parking space, aircraft may infringe taxiway strips. ATC will advise aircraft of appropriate taxiing routes.
c) Operators wishing to drive vehicles on the airport will be required to provide evidence of £10m airside driving liability insurance.
d) Within Apron 2, parking areas are marked by single white line boxes. Aircraft should park wholly within these areas unless advised by ATC. Aircraft may be required to shut down and push back into position if they cannot be safely manoeuvred under their own power, but will not be permitted to stop for long periods outside of the parking area as to do so may hinder RFFS vehicles. Caution should be exercised as apron edges are bounded by gravelled French drains.
e) Aircraft of a wingspan larger than 18 M may be accommodated on Apron 2 with caution by using wing-walkers, marshallers, or other methods of assurance.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Intensive instrument flying in all weather conditions takes place within 20 NM radius up to the lower limit of controlled airspace. Flight crews are strongly advised to contact Cranfield Approach in order to establish and communicate an accurate reflection of the traffic situation to all relevant participants of a service. Non-airways instrument traffic inbound to Cranfield are strongly advised to contact Cranfield Approach no later than 10 minutes flying time away.
b) In the event of aerodrome electrical supply failure, aerodrome ground lighting **will not** be available for up to 15 seconds.
c) Pilots are advised to exercise caution as this aerodrome has a deer hazard, particularly during the periods of dawn and dusk/official night, although patrols are mounted whenever the presence of deer is known or anticipated. Pilots are requested to report the location of any animals on the aerodrome to ATC.
d) Air Crew are advised that runway edge lighting does not conform to CAP 168 Chapter 6 Paragraph 6.56 specifically that runway edge lights should be located along the edges of the area declared for use as the runway. Current lights lay outside of this area by approximately 1 M. Pilots are to land as close to the centre-line as practicable. The edge of the useable runway area is delineated by white lines in accordance with CAP 168 Chapter 7.
e) Occasional helicopter activity at Helimech Helipad (520152N 0003653W).
f) Runway surface features a water ingestion area, known as the 'splash pit', approx 610 M from the RWY 21 threshold in the vicinity of the C intersection. This area is liable to collecting water and may become icy in freezing conditions. Standard runway surface conditions will be reported. However, be advised that any reported contamination may be concentrated in this area.
g) Local flying training may be concentrated in the area northwest of the airfield between SFC and base of controlled airspace.
h) UAS are routinely operated within the FRZ (Flight Restriction Zone), but outside the CFZ (Critical Flight Zone), up to a height of 400 FT. UAS operating inside the CFZ, or above a height of 400 FT will be individually notified via NOTAM.

5 HELICOPTER OPERATIONS

a) All helicopters should expect to join via published VRPs and operate to/from the main runway, integrating with fixed-wing traffic when required.

6 USE OF RUNWAYS

Not applicable

7 TRAINING

a) PPR is required for all operators, visitors, instrument training and circuit training. Slot times are allocated and must be adhered to.
b) Issue of training/test approvals is conditional upon such flights not causing delays to other aircraft. In exceptional circumstances training/test approvals may be withdrawn without prior notice by ATC.

c) **Opposite Direction Runway Operations - Lack of Positive Clearance** - Training aircraft carrying out instrument approaches to Runway 21 whilst Runway 03 is in use should go around and fly directly over Runway 21/03 not below 1000 FT AGL (1400 FT ALT) if no positive clearance is received.

EGTC AD 2.21 NOISE ABATEMENT PROCEDURES

a) In order that least possible noise disturbance is caused in areas surrounding the airport, aircraft operators should ensure that at all times their aircraft conform to the noise abatement techniques laid down for that type of aircraft.

EGTC AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.
b) Glider and other airspace activity which is not known to Cranfield ATC takes place beneath the London TMA in VMC and IMC.

2 CIRCUIT HEIGHTS

a) Day - Fixed-wing 1000 FT QFE. Night - 1200 FT QFE.

Note: *No dead-side available due to circuits operating in both directions.*

3 RUNWAY VISUAL RANGE

a) No RVR, only MET visibility reported.

4 IFR DEPARTURES

a) IFR Departures intending to enter Controlled Airspace should flight plan to join in accordance with the Standard Route Document.

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

EGTC AD 2.23 ADDITIONAL INFORMATION

a) Co-operative surveillance system in use to support ATS provision. All ADS-B equipped aircraft in receipt of a service are requested to display electronic conspicuity.

EGPG AD 2.19 RADIO NAVIGATION AND LANDING AIDS

INTENTIONALLY BLANK

EGPG AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) PPR: Radio (120.605 MHz), phone (01236-722822), email (ops@cumbernauldairport.org).

2 GROUND MOVEMENT

a) No aircraft is to enter the yellow hatched area at the fuel pump other than by hand manoeuvring.
b) All fixed wing operators must ensure that aircraft are not left or parked on the main apron after fuelling under any circumstances.
c) No aircraft to start or carry out engine runs with their tails directed towards any hangar or other aircraft.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) High ground rising to 1870 FT AMSL 5 NM and 1506 FT AMSL 4 NM to the northwest.
b) Outbound and Inbound aircraft on a north westerly track to be aware of the Glasgow Controlled airspace (Class D, SFC-6000 FT) 4 NM northwest of the airfield.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

Not applicable.

EGPG AD 2.21 NOISE ABATEMENT PROCEDURES

a) Runway 25 Departures: After take-off continue over golf course then turn right over the canal avoiding the old town of Dullatur.
b) Circuit Traffic: Circuit traffic on crosswind should turn downwind and avoid overflying the small villages of Banton and High Banton.
c) On right base for Runway 25 right-hand avoid overflying small row of seven houses at Braeface.

EGPG AD 2.22 FLIGHT PROCEDURES

1 ARRIVALS

a) IFR arrivals intending to use the RNP IAP shall obtain a slot from Cumbernauld operations as described in AD 2.22 Section 4.
b) IFR arrivals by aircraft unable to utilise the RNP IAP may, following prior coordination, request let down at Edinburgh or Glasgow airports before proceeding to Cumbernauld in VMC.

2 CIRCUITS

a) Circuit directions: Runway 25 - RH; Runway 07 - LH for all circuit traffic. Circuit height: 800 FT QFE.
b) When circuit is active standard overhead join at 2000 FT QFE, descending dead-side to join the circuit: 800 FT QFE.
c) During an Instrument Approach Procedure the circuit is not available to other aircraft.

3 VFR DEPARTURES JOINING AIRWAYS IFR

a) Subject to intended routing, expect to be controlled by either Scottish Control or Glasgow Approach, as appropriate.
b) Cumbernauld Radio can obtain clearances and squawk codes from the relevant agency on aircraft start-up.
c) Aircraft commanders are reminded that, on take-off from Runway 25, the Glasgow CTR (D) SFC-6000 FT is situated 4 NM ahead.
d) Aircraft must remain outside CAS until two-way communications are established with the controlling authority.

4 INSTRUMENT APPROACH PROCEDURES (IAP)

a) The RNP IAP at Cumbernauld is established in Class G airspace and no approach control service is provided.
b) The IAP must have a written pre-booked approach time slot from Cumbernauld Airports' website www.cumbernauldairport.org which must be adhered to.
c) Airborne requests for an IAP slot are not accepted, unless in an emergency.
d) Cumbernauld Operations will provide a briefing document relating to the IAP. Pilots are to abide by the procedures in the briefing document when executing the IAP.
e) Squawk code 5077 for radar conspicuity when using the EGPG RNP Approach, unless instructed to retain any previously allocated code by Scottish Control, Glasgow or Edinburgh ATC.
f) The Pilot Brief can be found on Cumbernauld's website www.cumbernauldairport.org for procedures and bookings.
g) In the event of RCF, if unable to land within 30 minutes of the IAF slot time, the pilot shall divert.
h) Light signals are not available at Cumbernauld.

EGLD AD 2.19 RADIO NAVIGATION AND LANDING AIDS

INTENTIONALLY BLANK

EGLD AD 2.20 LOCAL AERODROME REGULATIONS

1 AERODROME REGULATIONS

a) PPR by telephone or email.
b) Pilot Briefing on the aerodrome website www.egld.com.
c) Non-radio aircraft not accepted without prior permission from the AD Operator.
d) Normal HR of opening may be extended by prior arrangement with ATS (extended HR are not automatically licensed).
e) Pilots are responsible for the safety and conduct of their passengers whilst at the AD.

2 GROUND MOVEMENT

a) There are no hard taxiways. After heavy rain or snow the surface may be unsuitable for some aircraft types: contact ATS.
b) Avoid damaging the grass by unnecessary use of brakes to tighten turns.
c) Aircraft with poor prop clearance should enter / exit south at runway ends.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) The aerodrome is located within the northern boundary of the London Control Zone (Class D).
b) There is no overhead join. Northolt traffic overflies Denham not below 1500 FT AMSL. To ensure safe separation Denham maximum circuit altitude 1000 FT AMSL.
c) Avoid south-west part of the ATZ south of the A40 road.
d) A public road adjacent to the aerodrome boundary crosses the approach to Runway 24. Aircraft should not descend below the glidepath nor touch down before the displaced threshold.
e) APAPI: Visual glideslope signals for Runway 06 are visible to the left of the extended centreline where normal obstacle clearance is not guaranteed. Disregard APAPI until the aircraft is aligned with the runway.
f) Powerlines, 369 FT AMSL, 270°T, running north/south, 0.6 NM from ARP.

5 HELICOPTER OPERATIONS

a) Helicopters should fly the same circuit as fixed wing.

6 USE OF RUNWAYS

a) Runway 06/24 circuits are to the north: Runway 06 has a left hand circuit; Runway 24 has a right hand circuit.
b) Runway 12/30 has a variable circuit.
c) There is a grass strip to the north of, and parallel to, Runway 06/24 (“north side grass”).
d) Simultaneous approaches to the north side grass and Runway 06/24 are not permitted.
e) Simultaneous departures from the north side grass and Runway 06/24 are not permitted.

7 TRAINING

a) Only authorised operators may give flying instruction at the aerodrome.
b) Runway 12/30 not available for solo training flights.

EGLD AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots may deviate from noise abatement procedures to ensure flight safety.
b) Pilots must maintain safe separation and should fly a larger circuit if necessary to provide safe separation.
c) Runway 24 Arrivals: report at VRP Maple Cross, establish a long base leg. Overfly the lakes (where safely possible).
d) Runway 06 Arrivals: report at VRP St Giles, establish a long base leg. Overfly fields to try to avoid most houses in Chalfont St Peter and Gerrards Cross (where safely possible).
e) Runway 24 Departures: after take off maintain runway heading until past the houses on the right, then turn right before the A413 (where safely possible).
f) Runway 06 Departures: after take off maintain runway heading until past the caravan site on the left, then turn left over the lakes (where safely possible).

g) Keep the circuit small (where safely possible): turn downwind south of Chalfont St Peter and Maple Cross unless safe separation requires otherwise.

EGLD AD 2.22 FLIGHT PROCEDURES

1 VISUAL REFERENCE POINTS (VRP)

a) There is no overhead join. Maximum altitude 1000 FT AMSL.
b) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

2 CIRCUIT JOINING

a) To join the circuit, descend to circuit altitude 1000 FT AMSL, report at the VRP and establish a long base leg.
b) Look out for aircraft downwind.
c) Joining traffic must give way to circuit traffic.
d) Pilots should not orbit in the circuit.

3 CIRCUIT

a) Circuit altitude 1000 FT AMSL.
b) Use available equipment to aid conspicuity: landing light On; strobes On; transponder Alt.
c) Pilots should give position reports downwind and final.

4 DEPARTURES

a) After take off maintain runway heading, turn onto crosswind and climb to circuit altitude 1000 FT AMSL.
b) Extend crosswind leg towards the appropriate VRP.
c) Pilots in receipt of a clearance from Heathrow Radar or Northolt Approach may deviate in accordance with their clearance.

5 LOCAL FLYING AREA (LFA)

a) Denham LFA is that part of the Denham ATZ that lies within the London Control Zone (Class D).
b) Pilots of aircraft flying within the LFA are responsible for providing their own separation from other aircraft.
c) VFR flights may take place within the LFA subject to the following conditions:

   i. In compliance with the Class D airspace weather minima as defined in ENR 1.4;
   ii. Maximum altitude 1200 FT AMSL.

   Note: *Refer to ENR 1.4 for notifications.*

d) Aircraft unable to operate VFR may operate Special VFR within the LFA subject to the following conditions:

   i. Remain clear of cloud with the surface in sight;
   ii. Maximum altitude 1200 FT AMSL;
   iii. Minimum flight visibility 3 KM;
   iv. In compliance with the requirements for Special VFR flight detailed at ENR 1.2.

e) Aircraft flying in the LFA are not required to comply with the requirements of the London CTR Mode S Transponder Mandatory Zone, however:

   i. The carriage of a Mode S transponder within the LFA is encouraged;
   ii. Pilots of suitably equipped aircraft should select 7000 with altitude information.

6 AIRCRAFT IN THE LONDON CTR OUTSIDE THE DENHAM LFA

a) Aircraft operating VFR or Special VFR in the London CTR inbound to Denham may request a non-standard join. Pilots must contact Denham before entering the ATZ and must fit in with circuit traffic. If not visual with circuit traffic, or if the circuit is busy, the aircraft must join via the appropriate VRP.
b) Aircraft operating VFR or Special VFR in the London CTR must not assume permission has been issued to penetrate the Denham LFA. Heathrow Radar will, whenever possible, permit an aircraft to leave the frequency temporarily to obtain such permission.
c) Pilots requiring a VFR or Special VFR clearance to transit the London CTR must not enter the CTR until a clearance has been obtained.
d) Use of the overhead is possible with a clearance (e.g. for simulated engine failures in the overhead). The instructor should contact Heathrow Radar or Northolt Approach to obtain a clearance to join overhead, then obtain a frequency change to Denham.

7 NORTHOLT TRAFFIC

a) Northolt traffic in the Northolt Radar Manoeuvring Area (RMA) cross the Denham ATZ not below 1500 FT AMSL. To ensure separation, Denham circuit altitude 1000 FT AMSL. Aircraft wishing to enter the Northolt RMA must obtain clearance from Northolt on 126.450 MHz.

8 ATS ROUTE FLIGHTS

a) **Inbound aircraft**

Aircraft inbound via the ATS Route Network must follow the Heathrow Standard Arrival Routes (STAR) as shown at AD 2-EGLL-7-1 to 7-17. Pilots are to include EGLDZTZX in their Flight Plan.

b) **Outbound aircraft**

The Denham ATSU will notify the pending departure to London Terminal Control (Swanwick) (LTCC). The Denham ATSU will relay to pilots after departure instructions including the frequency for the appropriate LTCC sector and the pilot must request clearance to join CAS.

INTENTIONALLY BLANK

EGBD AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Runway 10/28 is only to be used for instruction in flying when a qualified flying instructor acts as pilot-in-command of the aircraft.
b) The aerodrome is not available for Public Transport passenger flights required to use a licensed aerodrome, or for aircraft unable to communicate by radio.

2 GROUND MOVEMENT

Not applicable

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) With the exception of Runway 35, there are no QDM markings on the runways.
b) The displaced landing thresholds to Runways 05, 23 and 35 are marked by black and white wing bars. The displaced landing thresholds to Runways 10 and 28 are marked by orange and white wing bars to give visual differentiation from other runways.
c) An electricity transmission line and pylons, 100 FT AAL, cross the centre-line of Runway 23 1200 M from touchdown.
d) Turbulence may be experienced from trees on the approach to Runway 23. These trees also shield aircraft low on final approach from those at the 23 hold. A good listening watch should be maintained and all appropriate radio calls should be made.
e) Electricity transmission lines and pylons running north side and west of aerodrome 100 FT AAL (275 FT AMSL).
f) Aerodrome Obstacles

i. 10/Approach 28/Take-off

Earth Bank 182 FT AMSL, 470 M beyond start of TORA across runway centre-line.

ii. 23/Approach 05/Take-off

Hedge 185 FT AMSL, 528 M beyond start of TORA across runway centre-line.
Trees 215 FT AMSL, 600 M beyond start of TORA across runway centre-line.

iii. 28/Approach 10/Take-off

Telegraph Wire/Poles 200 FT AMSL, 475 M beyond start of TORA across runway centre-line.
Trees 225 FT AMSL, 640 M beyond start of TORA across runway centre-line.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

Not applicable

7 TRAINING

a) Intentional 'touch and goes' are not permitted.
b) Training flights from any aircraft not home based are not accepted without permission from aerodrome licensee.
c) Helicopter training is not permitted.

EGBD AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots are to avoid overflying local villages.

EGBD AD 2.22 FLIGHT PROCEDURES

a) Due to East Midlands CTA, no overhead joins are permitted.
b) Special procedures applying to instructional flights and arrival and departure procedures for all flights must be obtained by telephone from Derby Aero Club when arranging prior permission.
c) Circuit directions and heights: Runway 05 -LH, 1000 FT; Runway 23 - RH, 1000 FT; Runway 35 - RH, 800 FT; Runway 17 - LH (RH if Runway 23 is in use for landing), 800 FT; Runway 28 - RH, 800 FT; Runway 10 - LH, 800 FT.

1	AD category for fire fighting services	RFF Category A4: Sun-Fri RFF Category 3: Sat RFF Category 5 & 6 available on request. RFF Category 5 may be accepted under RFF Category 4 remission.
2	Rescue equipment	Water and mud rescue facilities are available for Runways 09/27 during normal published hours of operation, subject to serviceability of equipment, at times when the weather conditions and sea state are conducive to such rescue operation.
3	Capability for removal of disabled aircraft	Arrangements are in place with an off site contractor. Lifting capability 20 tonnes.
4	Remarks	-

EGPN AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical de-icing. Runways 09/27 de-iced/anti-iced with KFOR (Potassium Formate fluids)/NAAC (Sodium Acetate solids).
2	Clearance priorities	Runway 09/27, Taxiway A, Taxiway B, Apron, Taxiway D, Taxiway E.
3	Remarks	Runway surface conditions during winter weather is reported giving details of the type, depth and extent of contamination for each third of the runway. Up to date information on Runway surface conditions can be obtained from ATC on 01382-662220.

EGPN AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	MAIN APRON Surface: Macadam PCR 296/F/C/Y/U WESTERN APRON Surface: Concrete PCR 309/R/C/Y/U
2	Taxiway width, surface and strength	Taxiway A: 15 M Surface: Macadam PCR 135/F/C/Y/U Taxiway B: 15 M Surface: Macadam PCR 135/F/C/Y/U Taxiway C: 10.5 M Surface: Macadam NIL

		Taxiway D: 10.5 M Surface: Macadam PCR 108/F/C/Y/U Taxiway E: 10.5 M Surface: Macadam PCR 108/F/C/Y/U
3	Altimeter checkpoint location and elevation	Stand 1: 14 FT - Stand 2: 13 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aerodrome Chart.
6	Remarks	Pedestrian access between the airport terminal complex and the Western apron(located on the north side of Taxiway C) is by means of a marked footpath which can be found located to the rear of the parking area. Aircrew are reminded that access to and from this area is not permitted via the active taxiways.

EGPN AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1 and 2 marked for self manoeuvring with marshallers assistance. Stand 1 has two pushback stands for Fairchild Dornier 328 aircraft or fuselage length less than 23 M by arrangement.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 09/27: Runway designators, centre-line and threshold markings on both runways. Runway light(s): Runway guard lights at Holding Point A and B.
3	Stop bars and runway guard lights (if any)	-
4	Other runway protection measures	-
5	Remarks	WDI (LGTD): 562705.59N 0030212.56W; 562705.65N 0030100.14W.

EGPN AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGPN AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	MET OFFICE ABERDEEN
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	MET OFFICE ABERDEEN 9 hours.
4	Trend forecast Interval of issuance	TAFs, METARs. TAFs 3 hours. METARs 30 minutes.
5	Briefing/consultation provided	Self briefing.
6	Flight documentation Language(s) used	On request. English.
7	Charts and other information available for briefing or consultation	F214 (UK Spot wind forecast chart), F215 (UK Low-level forecast chart) and GAMET.
8	Supplementary equipment available for providing information	-
9	ATS units provided with information	DUNDEE
10	Additional information (limitation of service, etc.)	METAR information available by ATIS on Telephone: 01382-662222.

Zero range is indicated at THR of Runway 09 and 27. Due to terrain effects, the DME may unlock in the sector 035 to 057 MAG. Localizer DOC 25 NM and Glidepath DOC 10 NM.

EGPN AD 2.20 LOCAL AERODROME REGULATIONS

1 AERODROME REGULATIONS

a) All training flights are strictly PPR. For full conditions see section 7 Training.
b) This aerodrome is not available for aircraft not able to communicate with ATC by radio.
c) Because of rising high ground and a dense urban area, the view to the north from the ATC VCR is restricted. Local aircraft movements to the north of the aerodrome are restricted.
d) Use of Dundee Aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome or found at www.hial.co.uk.

e) Operating crew are responsible for ensuring that their aircraft when parked and unattended at Dundee Airport are appropriately secured and sealed in line with operator's security requirements. In addition, operating crew are also responsible for carrying out the appropriate level of security checks when returning to their aircraft to meet security regulatory requirements.
f) Drone operators should endeavour to provide a minimum 24 hours notice of any drone flight whenever possible to Dundee ATC.
g) Passengers should be escorted and supervised at all times whilst on the aerodrome.
h) Operating times for aircraft arriving or departing requiring additional National Aviation Safety Plan (NASP) checks are Mon- Fri 0530-1630 (0430-1530); Sat-not available; Sun 1100-2130 (1000-2030). Outside of these times on request by email to InfoDundee@hial.co.uk.

2 GROUND MOVEMENT

a) Park as instructed by ATC, usually under marshaller guidance.
b) Light aircraft shall be directed to the grass eastern light aircraft park where marshalling guidance may be provided.
c) Start-up requests are mandatory for all aircraft parked on the Main and Western Aprons.
d) Aircrew are to wear high visibility jackets whilst on the aprons and movement areas.
e) Auxiliary Power Units are only to be operated 30 minutes after/before on/off block times. Extremis request outside these times are at the discretion of ATC.
f) All aircraft parking on the aprons with a MTOW of 13 tonnes or less are requested to leave the aircraft with 'Brakes Off' to enable towing.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Aerodrome is in the vicinity of Leuchars MATZ.
b) Because of the surrounding open spaces and tidal mud flats adjacent to the aerodrome, birds are a constant hazard at Dundee. At high tide Waders tend to roost on grass areas of the aerodrome. Throughout most of the year the hazard is moderate but may become severe at short notice when large concentrations of migratory birds pass throughout the area.
c) Taxiway Charlie is restricted to aircraft with weight of 5700 KG or less. The width of this taxiway is 10.5 M with asphalt surface.
d) Caution - Runway 09 GP Mast (Lgtd) (15 M AGL - 100 M north of Runway 09 threshold area) infringes the 1:10 obstacle protected surface projected from the runway centre-line.
e) Due to the constraints of the circuit, TCAS equipped aircraft should be aware that there is an increased chance of TCAS events occurring whilst joining or flying within the visual circuit.
f) Bird scaring takes place regularly.
g) Pilots are warned of helicopter activity in and out of Ninewells Hospital Helipad situated just north of the 09 Threshold (345°T, 0.6 NM).
h) Pilots are warned that unauthorised ground based laser lights have been directed towards aircraft in the vicinity of the aerodrome. All incidents should be reported immediately via the Tower to the Airport Authority.
i) Mobile jack up oil rigs are serviced at the Port of Dundee (562755.11N 0025536.90W) maximum height 540 FT AMSL and display red obstruction lights. The number of rigs at this location can vary.
j) Parachute activity may take place at Errol Aerodrome (562418N 0031055W, 6 NM SW of Dundee ARP) normally during daylight hours Wed-Sun and PH. The Dundee ATIS will include a warning when activity has been notified. Aircrew are advised to remain well clear of the drop zone when notified as active and will be provided with deconfliction advice by Dundee ATC when required or requested.
k) Pilots are to be aware of possible turbulence on both runways when the wind has a northerly component in excess of 10 KT.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

a) All training is subject to prior notification.
b) All Instrument training is subject to prior booking with ATC Tel: 01382-662220. The filing of a flight plan with intention to conduct instrument training does not constitute prior notification or booking. Failing to make a booking may result in aircraft being refused use of the facilities.
c) Operators intending to follow a programme of training flights should obtain prior approval from ATC via the Duty ATCO, Tel: 01382-662220.

EGPN AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots should avoid overflying Nine-Wells Hospital (1.2 nm bearing 306°T from the aerodrome).
b) Helicopters should avoid overflying the Docks area below 800 ft amsl.

EGPN AD 2.22 FLIGHT PROCEDURES

1 CIRCUITS

a) Circuit directions: Runway 09 - RH; Runway 27 - LH. Remain South of the Runway at all times.
b) Circuit Height: 1000 FT AAL unless otherwise directed by ATC.
c) Circuits are to be flown in such a manner as to avoid flight over built up areas in the vicinity of the airport whenever practicable.

2 DEPARTURES

a) To reduce conflict with traffic operating within the Leuchars MATZ, ATC may instruct VFR aircraft departing to the east to remain at not above 1000 FT AMSL until passing Broughty Castle northbound.
b) Jet and Turbine aircraft departing to the north are required to either climb straight ahead to 2000 FT before setting course or are to turn south off runway heading and set course overhead not below 2000 FT. ATC will advise the preferred option dependent on the traffic situation at the time.
c) Unless otherwise directed by ATC, VFR departures to the east from Runway 27 and VFR departures to the west from Runway 09 will be expected to depart the circuit from the end of the down-wind leg. The down-wind leg in both instances is south of the midpoint of the Firth of Tay.
d) To reduce traffic confliction, VFR departures to the east from Runway 27 should leave the down-wind leg and follow the south bank of the Firth of Tay towards the estuary mouth and only turn north after passing abeam Broughty Castle VRP.
e) If for any reason flight over water is undesirable, inform ATC and an alternative routing may be offered, subject to traffic, which reduces or removes the need to overfly the Firth of Tay.
f) Last departure to be no later than 15 minutes prior to Airport closure time.

3 ARRIVALS

a) Unless otherwise directed by ATC, IFR flights conducting a visual approach to either runway should expect to descend not below 2000 FT until directed by ATC and anticipate establishing on final approach no closer than 4 NM from touch-down.
b) Pilots of inbound IFR aircraft shall acknowledge receipt of the Transition Level on first contact with Dundee ATSU. The Transition Level will be broadcast on ATIS.

4 MISSED APPROACH PROCEDURE

a) EGD604 is 7 NM east of Dundee ARP. If it appears likely that during the standard missed approach, low performance aircraft will infringe EGD604 then such aircraft should turn right at I-DDE DME 4 onto track 135°M and climb to 2000 (1983) FT before turning right to return to NDB(L) DND at 3000 FT. Pilots should advise ATC on turning onto 135°M.

5 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5
b) NDB(L) and DME I-DDE are not co-located.
c) The Category C instrument approach procedure to Dundee Airport infringes the Perth ATZ (when active) at 1800 FT above Perth aerodrome elevation.

6 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

NOTES
1. Subject to ATC approval, when inbound to NDB(L) DND and within I-DDE DME 10, aircraft may descend to **3000**.
2. NDB(L) DND is 2.6NM from THR RWY 09 and is offset 230M north of LOC C/L.
3. The Category C Instrument Approach Procedure infringes the Perth ATZ at 1800FT above Perth aerodrome elevation. Pilots must notify ATC of their intention to conduct a Category C approach on first contact.
4. The eastern edge of the Perth ATZ lies 9.5NM west of THR RWY 09. To prevent confliction with possible VFR traffic in the Perth ATZ, pilots should not extend the outbound leg of the base turn beyond the prescribed procedural distances.
5. Due to terrain, LOC and glidepath flag alarms may be experienced at northern edge of coverage when below glidepath sector.
6. Quality of glidepath guidance is not suitable for coupled approaches below 200FT.
7. EGD604 is 7NM east of Dundee ARP. If it appears likely that during the standard missed approach, low performance aircraft will infringe EGD604 then such aircraft should turn right at I-DDE DME 4 onto track 135°M and climb to **2000**(1983) before turning right to return to NDB(L) DND at **3000**. Pilots should advise ATC on turning onto 135°M.

CHANGE (9/26): NOTE 7 REFERENCE TO LEUCHARS APPROACH REMOVED.

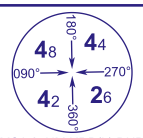
Arrival **not below 3000 or higher MSA.** Shuttle in hold as required to **3000.**

MAPt I-DDE DME 1
Continuous climb to **3000**. Initially straight ahead to **2000**, then turn left to **NDB(L) DND** at **3000** or as directed. (See Note 6)

Aircraft Category		**A**	**B**	**C**
OCA (OCH)	**Procedure**	**480**(463)	**480**(463)	**480**(463)
VM(C)OCA (OCH AAL)	**Total Area**	**970**(953)	**970**(953)	**1170**(1153)
	South of RWY 09/27	**540**(523)	**750**(733)	**1080**(1063)

Rate of descent						
	G/S KT	160	140	120	100	80
	FT/MIN	850	740	640	530	420



NOTES
1 Subject to ATC approval, when inbound to NDB(L) DND and within I-DDE DME 10, aircraft may descend to **3000**.
2 NDB(L) DND is 2.6NM from THR RWY 09 and is offset 230M north of LOC C/L.
3 The Category C Instrument Approach Procedure infringes the Perth ATZ at 1800FT above Perth aerodrome elevation. Pilots must notify ATC of their intention to conduct a Category C approach on first contact.
4 The eastern edge of the Perth ATZ lies 9.5NM west of THR RWY 09. To prevent confliction with possible VFR traffic in the Perth ATZ, pilots should not extend the outbound leg of the base turn beyond the prescribed procedural distances.
5 Due to terrain, LOC and glidepath flag alarms may be experienced at northern edge of coverage when below glidepath sector.
6 EGD604 is 7NM east of Dundee ARP. If it appears likely that during the standard missed approach, low performance aircraft will infringe EGD604 then such aircraft should turn right at I-DDE DME 4 onto track 135°M and climb to **2000**(1983) before turning right to return to NDB(L) DND at **3000**. Pilots should advise ATC on turning onto 135°M.

CHANGE (9/26): NOTE 6 REFERENCE TO LEUCHARS APPROACH REMOVED.

EGTU AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Aerodrome is not available at night for flights required to use a licensed aerodrome.
b) Aerodrome is not available at weekends and PH for helicopter training other than normal arrival/departures, due to free-fall parachuting.
c) Any Dunkeswell outbound air traffic are to contact Exeter Radar/Approach as soon as possible after departure.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Glider launching takes place at North Hill (505107N 0031639W) West-south-west of Dunkeswell.
b) Free-fall parachuting from up to FL 150 normally during daylight hours (ENR 5-5-3 refers).
c) Use is made of the grass areas outside the runway strips for sheep grazing.
d) Outside the Northeast boundary of the aerodrome, and separated from it by a public road, is a large paved area. It is not part of the aerodrome. Pilots should positively identify the displaced landing threshold to Runway 22 before committing the aircraft to final approach.
e) The old perimeter tracks are unsuitable for use as a taxiway. Pilots are cautioned to only use established taxiways/runways for taxiing.
f) Pilots should note the existence of three radio masts erected by the MOD within the aerodrome circuit. They do not constitute a hazard but pilots should be aware of their presence.

- South side (Lgtd), 1007 FT AMSL, 505105N 0031412W;
- North side, 79 FT AGL, 505225N 0031349W;
- South of north side (Lgtd), 951 FT AMSL, 505206N 0031359W.

g) High ground southwest and within 2500 M radius of ARP 896 FT AMSL 505045N 0031438W.

5 HELICOPTER OPERATIONS

a) Helicopter pilots wishing to land at Dunkeswell should be aware of the designated area on the grass triangle in line with Runway 22 numbers.
b) Pilots to call on RTF before starting rotors.
c) No rotors are to be turning in the ATZ when parachuting is in progress.

6 USE OF RUNWAYS

Runway 17/35 is not available to aircraft that require a licensed runway due to an obstacle within the Obstacle Limitation Surfaces.

7 TRAINING

Not applicable.

EGTU AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots are requested not to overfly Dunkeswell Village and local housing estate on eastern side of aerodrome below 500 FT AGL.

EGTU AD 2.22 FLIGHT PROCEDURES

1 CIRCUITS

a) Circuit directions: Runway 04 - RH; Runway 22 - LH. Circuit height: 800 FT.
b) No overhead joins due to parachuting.

c) No straight in approaches.
d) No orbits in the circuit or on final approach, ie extend downwind or go around.
e) Aircraft are to join downwind or base.

EGSU AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) First 50 M of paved Runway 24 is sterile and is marked with yellow chevrons.
b) Visiting aircraft must be insured in accordance with EU Regulation (EC) 785/2004. Art 7. Policies must include (where applicable) passenger legal liability insurance. Policies must also include the AV52E endorsement, proof of which may be requested on landing.
c) Although Duxford has parallel runways they are not available for simultaneous use and are to be treated as one runway.
d) Special rules are in force for special events. Relevant AICs give details.
e) The aerodrome is only open to visitors during specified hours. Traffic operating outside the published opening times is private and Duxford based.
f) Available for aircraft requiring to use a licensed aerodrome.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Pilots of aircraft who are required to use a licensed aerodrome are cautioned that the taxiway strips are not suitable for use by aircraft whose wingspan exceeds 40 M. Other aircraft should use the taxiways with extreme caution due to the reduced obstacle clearance.
b) Fighter and high performance aircraft regularly carry out non-standard manoeuvres and use NATO style joining procedures. Visiting pilots must call in plenty of time before entering ATZ.
c) Pilots should not overfly the gas venting station southeast of the aerodrome below 2700 FT.
d) Caution: Linton Zoo has birds of prey flying up to 2500 FT.
e) Earth bank - mid-point *520537.00N 0000829.00E, 134 FT AMSL.
f) When operating to the north of Duxford outside of the Duxford ATZ, it is strongly advised that communication is established with Cambridge APP 120.965 and note the Cambridge 23/05 Instrument Final Approach.
g) No overflight of the museum buildings below 1000 FT AGL.
h) Caution should be exercised in regards to Fowlmere Airfield that lies 3 NM to the west of Duxford Airfield. Fowlmere CCT enters the north-western area of the Duxford ATZ. Please visit https://www.iwm.org.uk/visits/iwm-duxford/pilots for information.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

a) All circuit training strictly PPR.
b) Display practices must be booked in advance with Duxford ATC 01223-833376.

EGSU AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots should avoid overflying all local villages especially Duxford, Thriplow, Whittlesford and Fowlmere and the adjacent bird sanctuary.

EGSU AD 2.22 FLIGHT PROCEDURES

a) There are no overhead, deadside or crosswind joins at Duxford to assist in deconfliction of circuit patterns.
b) Circuit patterns are variable with no dead-side. It is therefore essential that pilots obtain a briefing from Duxford before departure whether inbound or outbound.
c) Traffic departing Runway 06 continue straight ahead for 2 NM before turning (BP Roundabout). Traffic joining for Runway 24 LHC; join downwind and position for 2 NM final (BP Roundabout). Traffic joining for RWY 06 RHC join downwind. Traffic departing RWY 24 LHC **no right turn** until passed Royston.

EGSU AD 2.23 ADDITIONAL INFORMATION

a) Please visit https://www.iwm.org.uk/visits/iwm-duxford/pilots for additional museum, airfield information and links to the airfield fees and aerodrome manuals.

EGSR AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Pilots are to obtain a brief before departure inclusive of Noise abatement procedures currently in force.
b) All aircraft using this aerodrome and its facilities are required to have third party liability insurance cover in the sum of at least £1,000,000.
c) Non-three axis microlights (i.e. flex-wings) not permitted.
d) Autogyros not permitted.
e) Hot air balloons not permitted.
f) Public platform cost share flights not permitted.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) At the entry to the parking area, the distance between taxiway centre-line and parked aircraft is only 8 M. Visiting pilots should obtain a briefing on taxiway procedures and taxi with extreme caution.
b) Power lines cross Runway 06 approach. Pilots should not land before the displaced threshold.
c) Taxiway strip is not provided along the taxiway or in the apron area. Pilots should follow the yellow taxiway centre-lines where provided. Pilots should obtain a briefing on taxiway procedures and taxi with extreme caution.
d) The runway designators for both Runways 06 and 24 are not positioned in the centre of each runway. They are positioned in the centre of the grass section of each runway.
e) Pilots may experience windshear on either runway.
f) Caution required when taxiing in the vicinity of manoeuvring helicopters due to down-wash.
g) Helicopter circuit and approach pattern different to fixed wing circuit and approach pattern.
h) Warbird operations take place on a daily basis.
i) Student pilot training takes place on a daily basis.
j) Aerodrome Obstacles:

   i. Control Tower 24 FT AAL.
   ii. Hangar 25 FT AAL.
   iii. Power lines, 251 FT AMSL, 270°T 0.2 NM from ARP running NW/SE.
   iv. 06/Approach 24/Take-off – Vehicles on road 240 FT AMSL, 1040 M beyond start of TORA.

5 HELICOPTER OPERATIONS

a) Helicopter pilots should follow preferred rotary arrival and departure procedures.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

Not applicable.

EGSR AD 2.21 NOISE ABATEMENT PROCEDURES

a) Noise abatement procedures in force on Runway 06/24 for departures, circuits and landing.
b) Full details can be found at https://www.anglianflightcentres.co.uk.

EGSR AD 2.22 FLIGHT PROCEDURES

a) Circuit directions: Runway 06 - RH; Runway 24 - LH.

EGSR AD 2.23 ADDITIONAL INFORMATION

a) Drone flight authorisation requests must be made via email (info@flyafc.co.uk). 72 hours prior notice is required.

Swissport, Tel: 01332-812924; Fax: 01332-853584 (Passengers and Cargo).

EGNX AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotels in the vicinity and on the airport.
2	Restaurants	H24 vending facilities, shops, restaurants, and bar.
3	Transportation	Range of long distance coach services, local bus service and taxis. Nearest railway station, East Midlands Parkway 5 miles (regular shuttle buses).
4	Medical facilities	Limited first aid.
5	Bank and Post Office	The ChangeGroup.
6	Tourist Office	-
7	Remarks	-

EGNX AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 RFF Category 8 on Remission. RFF Category 9 available by arrangement. Minimum 12 hours notice required. Requests should be directed to the Aerodrome Control Room on 01332-852973.
2	Rescue equipment	Details available on request from Aerodrome.
3	Capability for removal of disabled aircraft	The registered owner or aircraft operator retains complete responsibility for the removal of the disabled aircraft. All Airline operators at EMA are expected to have aircraft recovery plans and should liaise with the Aerodrome Coordinator. The Airfield Operations Duty Manager (AODM) is the Aerodrome Coordinator for disabled aircraft removal operations. The AODM will coordinate the aircraft recovery operation and should be contacted on 07542-383390 by the registered owner or aircraft operator before any arrangements are made.
4	Remarks	-

EGNX AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical de-icing.
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Snow state and clearance programme Tel: 01332-852852, Ext 2973.

4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Ground Movement/Parking/Docking Chart.
6	Remarks	Taxiway J - Code F leading off Taxiway A on to the West Apron. From junction with Taxiway B, Taxiway reduces (south) to Code D Taxilane. Runway intersections M and S are not available for aircraft larger than Code C (maximum span 36 M). Delta Taxilane between D and V holding points widens to a bespoke maximum wingspan of 68.4 M. Taxiway V - Bespoke limited to maximum span of 68.4 M and maximum length of 76.25 M.

EGNX AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 21, 23, 24 and 70R are self-manoeuvring, with all other stands being a nose-in/push-back configuration. All apron stands are provided with centreline and nose/nosewheel stop position markings. Marshalling guidance will be given to all pilots to indicate the stop position. ALL aircraft parking on the aprons may only proceed onto stand under the guidance of a marshaller. If no marshal guidance is available, aircraft MUST NOT enter the stand and MUST hold on the taxi lane until a marshaller is present.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 09/27: Runway designation, landing thresholds, edge, centre-line, aiming point, touch down zone. Runway light(s): Runway guard lights at all taxiway intersections. Taxiway marking aid(s): Taxi holding positions. Enhanced taxiway centre-line markings are provided at each runway/taxiway intersection that, on approaching the runway, denote the proximity of the runway holding positions closest to the runway. Taxiway light(s): Green centre-line with blue edge lights on corners. Turn-offs-amber and green centre-line with blue edge lights. Taxiways Charlie, Charlie Alpha, Tango and Delta are not equipped with taxiway centre-line lighting.
3	Stop bars and runway guard lights (if any)	Multiple stopbars with red HI lighting. Runway stop bars are in operation H24.
4	Other runway protection measures	-

5	Remarks	3 X WDI: 524957.60N 0011853.79W (LGTD), 524955.93N 0012026.69W (LGTD) and 524958.07N 0011936.57W.

EGNX AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGNX AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

EGNX AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use by aircraft not able to communicate with ATC by radio is subject to prior permission.
b) Use governed by regulations applicable to East Midlands CTR.
c) Jet aircraft failing to meet certification levels appropriate to Chapter 3 will not be permitted to land or take-off between 2300-0700 (2200-0600) except in special circumstances. Dispensation to do so within strict guidelines must be sought from ATC.
d) Use of East Midlands Airport is subject to Standard Conditions of Use, which can be requested from the Finance Section. Tel: + 44(0)1332-852975 or by e-mail: finance@eastmidlandsairport.com.
e) All flights, except General Aviation and military flights, are subject to the prior approval of the Managing Director, East Midlands Airport Ltd and prior notification to Airport Co-ordination Ltd, who act as an agent for the Airport. Requests for ad-hoc slot allocations should be made to ACL during working hours Mon - Fri 0830-1700 by e-mail: lonacxh@acl-uk.org; or Tel: +44(0)161-493 1850, Fax: +44(0)161-493 1853, or at all other times to Airfield Operations: +44(0)1332-852 973. OCS account holders can add, change and cancel slots at any time on the online co-ordination portal: https://www.online-coordination.com/default.aspx?AspxAutoDetectCookieSupport=1.
f) All visiting aircraft must pre-book a designated handling agent prior to landing at EMA.
g) Planned Diversion Procedure - All operators are advised that before filing East Midlands as an alternate, they are required to have made arrangements for ground handling, maintenance and aircraft recovery. This arrangement is subject to the agreement of the Airport Management. Nothing in this procedure shall however prevent an aircraft that has declared an emergency from landing.

2 GROUND MOVEMENT

a) Stand allocation will be by the Airport Authority.
b) Aircraft must be pushed back from parking stands unless operating form a self-manoeuvring stand (as detailed in AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS). Powerback manoeuvres are not permitted.
c) Pushback clearances may be issued to designated Tug Release Points (TRP's) where applicable. Standard pushback clearances will be given when TRP's are not installed. See Aircraft Ground Movement/Parking/Docking Chart AD 2.EGNX-2-2 for TRP locations.
d) The airside area is a 24 hour mandatory high visibility clothing area. All flight crews are to wear high visibility clothing for all ramp activities (including aircraft walkrounds).
e) The operators of all aircraft using the aprons, all of which are within the Critical Area as defined by the requirements of the Aviation Security Act 1982 as amended by the Aviation and Maritime Security Act 1990, shall designate a handling agent in advance of any inbound flight.
f) Parking on the aprons is strictly PPR. Within the apron areas only, crew and passenger transport may, subject to availability and payment, be provided by the handling agents.

The apron areas to the west of the M Taxiway is not available for aircraft parking except:

i. On the aprons outside all hangars with the permission of the company occupying the hangar concerned or the Airport Authority;
ii. On the area bounded by dashed white lines on the west side of the Maintenance Area North apron and with the permission of Donair Limited.

Aircraft operators parking on any part of this area without permission will be in contravention of the Airport Byelaws relating to East Midlands Airport made under the Civil Aviation Act 1982.

g) Runway intersections M and S are not available for aircraft larger than Code C (maximum span 36 M).
h) Aircraft ground movement modelling for Code F and above, is available on request to ops.safety@eastmidlandsairport.com.
i) When using Runway 27, Taxiway S is normally used for departures. Landing traffic should not plan to vacate the runway at Taxiway S without first requesting permission from ATC.
j) Aircraft up to max Beech King Air (B350) only can use code B Taxilane MA.

k) During taxiing, pilots should be expected to encounter a wide range of differing aircraft types and sizes which may be difficult to visually acquire during periods of poor visibility or at night. Aircrew remain responsible for wingtip separation and, if in any doubt, should stop, hold position and request marshaller assistance. Pilots should exercise caution when taxiing on A in the vicinity of runway intersections H, M, S and W due to the possible presence of other aircraft holding at these intersections for departure.
l) Long wheelbase code E/F aircraft should use caution when entering/exiting the runway at all exits due to pavement width constraints.
m) All departing B747 operations on the East and West aprons are to use minimum break away power when first moving away. Additionally, due to jet blast, all arriving and departing B747s shall use the minimum thrust necessary when taxiing in the East and West aprons.
n) Taxiway C is restricted to Code C operations. Code D aircraft using stands 20 (B767-300W) and 24 (B757-200W) must be towed on and towed off via Q.
o) East apron entrance/exit V is restricted to maximum span of 68.4 M and maximum length of 76.25 M (B747-8).
p) Due to taxiway limitations, use of the airfield by the following long wheelbase aircraft is strictly PPR: A340-600, A350-1000, A380-800, B777-300. Requests should be made to ops.safety@eastmidlandsairport.com.
q) Stands 4 and 31 closed.

3 CAT II/IIIB OPERATIONS

a) Runway 27, subject to serviceability of the facility, is suitable for Category II/IIIb operations by operators whose minima have been accepted by the Civil Aviation Authority.
b) During Category II/IIIb operations, special ATC procedures (Low Visibility Procedures) will be applied. Pilots will be informed by ATIS broadcast or by RTF when these procedures are in operation.
c) Holding Points Sierra 1 and 2, Whiskey 1 and 2, Mike 1 and 2 and Hotel 1 and 2 are closed when Low Visibility Procedures are in force.
d) All Runway 27 departures will be via Holding Point Alpha 2 only, and all landing aircraft must only vacate the runway via Holding Point Golf 2.
e) Low Visibility Procedures Runway 09

   i. During periods of low visibility, to protect departing aircraft, ‘Low Visibility Procedures’ may be in force. Arriving aircraft are limited to CAT I or LTS CAT I approaches only. Pilots will be informed via ATIS broadcast or by RTF when these procedures are in operation.
   ii. During Low Visibility Procedures all departures will be via Holding Point Golf 2 only and all landing aircraft must vacate via Holding Point Alpha 2.

f) When visibility drops below 350 M, Airfield Operations 'lead vehicles' are available on request.

4 WARNINGS

a) Interference causing large fluctuations to the heading indications of magnetic compasses may be experienced by aircraft in the vicinity of holding point Whiskey One and on the runway, north of Whiskey One. All pilots are advised to carry out any pre take-off check of Direction Indicator against magnetic compass in areas other than those mentioned above.
b) Grass Cutting:

   Consequent upon the implementation of the long grass programme relating to the control of birds, the following will be introduced:

   Grass cutting may take place on a daily basis between April and October inclusive within the strip enclosing Runway 09/27. Circuit flying by light aircraft may be restricted at certain times to permit grass cutting in the areas immediately adjacent to the runway.
c) Pilots are advised that in the Spring and Autumn, bird concentrations may be present on all areas under agricultural use on the approaches to Runway 09/27. Deterrent measures within the Airport's boundaries are carried out by the Bird Control Unit and pilots may be requested by ATC to delay a departure or arrival if bird concentrations within the Bird Control Unit's area of control prove difficult to disperse.
d) A pyrotechnic factory is sited approximately 3 NM north of the aerodrome. Pilots are warned that rockets, carrying flares of up to 150,000 candela deployed on parachutes, may be tested up to a height of 1000 FT AGL, (1100 FT AMSL) by day and night.
e) A flare stack is sited at Chellaston (*525154N 0012536W). The stack is 36 FT above ground level (266 FT AMSL) and the flare is 20 FT in length.
f) There is a model aircraft flying site located approximately 2.3 NM north east of the airport within the ATZ and Long Eaton Lane (5253337N 0011722W). SUA (Small Unmanned Aircraft) operations will usually remain below a height of 400 FT (495 FT AMSL). In exceptional circumstances, SUA operations may be permitted up to a height of 800 FT (895 FT AMSL) subject to approval from East Midlands Airport ATC. In this case, ATC will advise aircraft operating in the vicinity of the site that high level SUA operations are taking place.
g) The grass verges of the taxiways and aprons are weak in places and liable to waterlogging.
h) Pilots are warned of the possibility of building induced turbulence and wind-shear when landing on Runway 09 in strong southerly winds.
i) High sided vehicles may be parked adjacent to the western perimeter fence.
j) The Maintenance Area and Taxiway M, south of M3 are not controlled by ATC. Pilots should exercise caution and expect uncontrolled vehicle and aircraft movements in this area.
k) Two wind turbines operational bearing 230° from the ARP, range 1076 M, max blade-tip height 148 FT AGL. Pilots may experience a slight increase in turbulence in southerly winds.
l) Cables exist north of the airport.
m) Certain radio navigation and landing aids are unavailable due to maintenance during the following periods of each month:

   i. ILS - Sunday 0900-1300 (0800-1200).
   ii. M511 - 2nd Tuesday of the month 0930-1330 (0830-1230).
   iii. EME - 4th Monday of the month 0930-1230 (0830-1130).
   iv. EMW - 3rd Monday of the month 0930-1230 (0830-1130).
   v. FFM - 4th Thursday of the month 0930-1200 (0830-1100).
   vi. DME - 2nd Wednesday of the month 0930-1130 (0830-1030).

5 HELICOPTER OPERATIONS

a) IFR.

i. Arrival Procedures

1. Following an IFR approach to Runway 09/27 ground or air taxi to parking areas as instructed by ATC. Helicopters which can ground taxi, will normally follow the taxiway to their assigned parking area.

ii. Departure procedures

1. Proceed via the taxiway system for a departure on Runway 09/27 as directed by ATC.

b) VFR.

i. Arrival Procedures

1. Helicopters should expect to be cleared into the CTR via the Long Eaton or Shepshed VFR Lanes direct to either left or right base at level as may be assigned by ATC. Overflight of the villages of Castle Donington to the north and Diseworth to the south is to be avoided.
2. On receipt of a landing clearance, helicopters are to land on Runway 09/27 and follow instructions issued by ATC for appropriate runway exit point and stand or parking area. Pilots should avoid exiting the runway via A1, W1 or S1 in the case of Runway 27 or G1, H1 or M1 in the case of Runway 09 without specific instructions from ATC.
3. On vacating the runway, pilots should expect instructions to taxi to the designated parking area following the taxiing procedures applicable to IFR arriving flights (see sub paragraph a (i)).

ii. Departure Procedures

1. Pilots of Helicopters should expect instructions to proceed via the taxiway system for a departure on Runway 09/27 as directed by ATC.

c) Special VFR Procedure

i. Arrivals and Departures are as for VFR arrival and departure procedures.

d) Helicopter Movements to/from Donington Park

i. All helicopters operating into and from Donington Park Racing Circuit shall use only areas defined and promulgated by the owners of the site and their permission to operate shall have first been obtained by the aircraft commander.
ii. The owners of the site shall promulgate to helicopter operators to whom they grant permission to land, details of any site to be used and shall draw their attention to the restrictions which they, the owners, may place upon it and to the Air Traffic Rules for the East Midlands Control Zone/Control Area.
iii. Air Traffic Control Instructions for helicopters to proceed to or depart from Donington Park Racing Circuit will not be withheld for any reasons other than traffic reasons, but any such instruction given shall not constitute a clearance to land nor shall it to be deemed by the aircraft commander as granting permission to use the approved site.

6 USE OF RUNWAYS

a) In accordance with EU OPS Sub-part E the following approach operations are available to approved operators:

i. Runway 09 suitable for Lower than Standard Category I operations supported by an ILS Classification of II/D/2;
ii. Runway 27 suitable for Lower than Standard Category I operations supported by an ILS Classification of II/D/2.

7 TRAINING

a) Training flights and Instrument Rating Tests. Training requires the prior approval of ATC and application should be made as far in advance as possible; see AD 2-EGNX-1-11 paragraph 10. Special conditions apply for jet-engined aircraft. Operators wishing to take advantage of rebated fees and charges for training are advised that application for training rebates MUST be made in advance to the Airport Authority. Rebates are not granted retrospectively.

EGNX AD 2.21 NOISE ABATEMENT PROCEDURES

1 NOISE

a) Noise abatement Procedures – All aircraft inbound or outbound from the aerodrome are required to conform to the following procedures; notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger, or in compliance with ATC instructions.

2 GENERAL

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance to the area around the aerodrome.
b) Whenever possible aircraft should avoid overflying the villages of Diseworth (south of the aerodrome) and Castle Donington (north of the aerodrome).

3 TAKE-OFF AND CLIMB PROCEDURES (INCLUDING 'GO-AROUNDS')

a) Aircraft Operators shall instigate their aircraft manufacturer's noise abatement recommended procedures on departure and up to FL 100, or the procedures listed in paragraphs i to vi:

i. Take-off to 1500 FT QNH:

Power – Normal take-off.

Speed – V2 + 10 KT (+).

Flaps – Set as appropriate.

ii. 1500 FT to 3000 FT QNH:

Power – Reduced to climb thrust.

Speed – V2 + 10 KT (+).

Flaps – Maintain previous setting.

Note: *V2 + 10 KT (+) indicates that V2 + 10 may be exceeded where pitch angle or specific aircraft characteristics are possible limiting factors.*

iii. At 3000 FT QNH Retract flaps on schedule and assume normal en-route climb.
iv. Between 3000 FT QNH and FL 100: Maximum climb speed 250 KT unless otherwise instructed.
v. **All** turbo-jet aircraft or turbo-fan aircraft departing from Runway 27 shall attain an altitude of 1500 FT and shall have passed the end of the runway before commencing any turn.
vi. Aircraft 'going around' from an approach to Runway 27 shall not commence any turn until the end of the runway and shall avoid overflying Castle Donington (sector 360° MAG to 065° MAG, radius 0.65 NM from the localizer).
vii. All turbo-jet, turbo-fan aircraft and aircraft in excess of a gross weight of 17000 KG, departing 'Northbound' from Runway 09 shall, as soon as practical after passing the end of the runway, track 095° MAG to 1.5 NM before turning left in accordance with the departure SID or issued clearance.
viii. All turbo-jet, turbo-fan aircraft and aircraft in excess of a gross weight of 17000 KG, departing 'Southbound' from Runway 09 shall, as soon as practical after passing the end of the runway, track 095° MAG to 2.0 NM before turning right in accordance with the departure SID or issued clearance.
ix. After take-off the aircraft shall be operated in such a way that it is at a height of not less than 1000 FT AAL at 6.5 KM from start of roll as measured along the departure track of that aircraft.

4 TAKE-OFF PROCEDURES. RUNWAY 27 BETWEEN THE HOURS OF 2200-0700 (2100-0600)

a) All departures should be from Whiskey. Runway length from a beam Whiskey is 2463 M; full length take-off is available on request for operational performance reasons, or for ATC requirements, only. When full length is requested, aircraft may be held at A3 prior to entering Runway 27 at A1.

5 PREFERRED RUNWAY USAGE

a) During light wind conditions aircraft may be required to use either runway subject to a maximum tailwind of 5 KT.

6 ILS APPROACHES

a) When using the ILS in IMC or VMC, aircraft shall not descend below 2000 FT QNH before intercepting the glidepath, nor thereafter fly below it. Aircraft approaching without assistance from the ILS or radar shall not at any time follow a descent path lower than that which would result from an approach using guidance from the ILS.

7 CONTINUOUS DESCENT APPROACHES

a) Turbo-jet and turbo-prop aircraft are expected to apply continuous descent, low power, low drag approach techniques at all times.
b) Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a low power, low drag, continuous descent approach profile. ATC will provide estimated track distance to touchdown to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the glidepath at the appropriate height for the distance without level flight.
c) To facilitate these techniques aircraft should be flown no faster than 250 KT from the Speed Limiting Points and below FL100 and 250 KT-210 KT during the intermediate approach phase. Thereafter speed should be managed so as to achieve a continuous descent using as little power or drag as possible. ATC may impose speed control if required for separation purposes.

d) ATC will provide regular range checks. Pilots who require additional track mileage to facilitate a successful CDA should inform ATC as soon as the requirement is apparent.

Note: *For monitoring purposes, a descent will be deemed to have been continuous provided that no segment of level flight longer than 2.5 NM occurs below 6000 FT QNH and 'level flight' is interpreted as any segment of flight having a height change of not more than 50 FT over a track distance of 2 NM or more, as recorded in the airport Noise and track-keeping system.*

8 REVERSE THRUST

a) Pilots are requested to avoid the use of reverse thrust or reverse pitch above idle power settings on landing, consistent with the safe operation of the aircraft between the hours of 2200-0700 (2100-0600).

9 VISUAL CIRCUITS

a) Large aircraft and all turbo-jet and turbo-fan aircraft, when carrying out circuits, shall be flown at an altitude of at least 2000 FT QNH and turns onto the crosswind leg must not be initiated until after passing the up-wind end of the runway.
b) Pilots shall avoid making their final turn on approach to Runway 27 over the village of Kegworth. All circuits to the south of the aerodrome must keep clear and south of the village of Diseworth, all circuits to the north of the aerodrome must keep clear and north of the village of Castle Donington.
c) Pilots shall avoid direct over flight of the villages of Aston and Weston-on-Trent 2 NM to the northwest of the aerodrome.

10 TRAINING FLIGHTS

a) Training requires the prior approval of ATC. Permission will only be given for such flights between 0800-1200 (0700-1100) and 1400-1800 (1300-1700). Training will only be permitted by based operators, regular users of the airport or non-jet aircraft below 5700 KG MTOW. Training on Saturdays, Sundays and UK Public Holidays will not be permitted except by non-jet aircraft below 5700 KG MTOW.

11 ENGINE RUNNING

a) Engine running of aircraft will not be approved between 2300-0600 (2200-0500), unless an aircraft is urgently required to provide an operational service. For further information contact the Airfield Operations Duty Manager on Tel: 07542-383390.
b) Static ground running of aircraft engines above idle power is not permitted for Code D, E or F aircraft having more than two engines.

12 AUXILIARY POWER UNITS (APU)S

a) Use of APU shall be limited as much as possible.
b) APU may be used:

i. 5 minutes after 'On Blocks';
ii. 30 minutes before Estimated Time of Departure (ETD).

Requests for operational extensions, e.g. aircraft maintenance, may be approved by the duty Airfield Safety and Compliance Officer on Tel: 07880-787543.

13 OPERATION RESTRICTIONS

a) Any aircraft which has a quota count (QC) of 16, 8 or 4 may not take off or land during the night period 2300-0700 (2200-0600).
b) An aircraft may not take off or be scheduled to land during the night period where the operator of that aircraft has not provided (prior to its take-off or prior to its scheduled landing time as appropriate) sufficient information to enable the airport authority to verify its noise classification and thereby its quota count.

14 DAY NOISE LIMITS

a) Any aircraft shall, after take-off, be operated in such a way that it will not cause a Maximum Sound Level (Lmax) exceeding 90 decibels A-Weighted (dBA) by day 0700-2300 (0600-2200), as measured at any noise monitoring terminal at any of the sites in the table in section 15. Any exceedance of the daytime noise limit will incur a charge as detailed in the Airport Fees and Charges document.

15 NIGHT NOISE LIMITS

a) Aircraft departing between 2300-0700 (2200-0600) are required to operate within a maximum noise limit (measured at a distance of 6.5 KM from start of roll).
b) Noise limits at specific monitors may vary from the below. This is due to adjustments at each monitor made with reference to the height and distance relative to 6.5 KM from start of roll, and the departure route flown. The maximum noise limits are defined as follows:

QC Category	Proposed Limit
QC: 0.25 and below	80 dB
QC: 0.5 and QC1	82 dB
QC: 2 and QC4	84 dB

c) QC = quota count (as defined in the UK AIP Supplement)

d) Any aircraft shall, after take-off, be operated in such a way that it will not cause more noise than these limits when measured at any noise monitoring terminal at any of the sites in the table below:

Site	Elevation above aerodrome	Latitude	Longitude
Site 1: Weston-on-Trent	39 M	525040N	0012459W
Site 2: Wilson	47 M	524922N	0012352W
Site 3: Sutton Bonington	43 M	524941N	0011455W

e) The limits shall be adjusted in accordance with the following table to take account of the location of the terminal and its ground elevation and equipment tolerance relative to the aerodrome elevation.

Site	Adjustment dBA	Runway
Site 1: Weston-on-Trent	Minus 1.8	27
Site 2: Wilson	Plus 4.6	27
Site 3: Sutton Bonington – TNT/POL	Minus 1.2	09
Site 3: Sutton Bonington – SAPCO	Minus 1.3	09

f) Aircraft that exceed the maximum noise limit will be subject to a penalty as stated in the airport fees and charges document.

EGNX AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Arrival Routes (STARs).

i. Standard Arrival routes for aircraft inbound from the UK ATS Route Network will be routed via the Standard Terminal Arrival Routes (STARs) detailed at AD 2-EGNX-7-1 to 7-4.
ii. Where STARs are designated as RNAV1 Only, Non-RNAV 1 aircraft shall file the via the existing route structure as featured in the Standard Route Document (SRD). Aircraft should not proceed beyond ROKUP or PIGOT without ATC clearance.

b) Aircraft inbound from the UK ATS Route Network will be cleared into the CTR/CTA without having to request a specific entry clearance.
c) Initial Approach Procedures for aircraft to proceed from holding area PIGOT and ROKUP are detailed at AD 2-EGNX-7-10 to 7-11.

Note: *Due to the removal of the DTY/TNT DVORs, IAPs as detailed at AD 2-EGNX-7-10 and 7-11 are only available to aircraft that are RNAV1 compliant.*

d) Inbound Procedure other than on the UK ATS Route Network.

i. Aircraft wishing to enter the East Midlands CTR/CTA direct from the London Flight Information Region are required to obtain permission at least 10 minutes before reaching the Zone or Area boundary, when they will be advised of the route to be followed consistent with the current traffic situation.

e) Holding patterns are as follows:

Midlands NDB(L) EME	Holding axis 270° M inbound, turning left, maximum holding speed 210 KT, minimum holding level, 3000 FT ALT.
Midlands NDB EMW	Holding axis 090° M inbound, turning right, maximum holding speed 210 KT, minimum holding level, 3000 FT ALT.
PIGOT	Terminal Holding Fix is established at PIGOT as detailed on the appropriate STAR charts.
ROKUP	Terminal Holding Fix is established at ROKUP as detailed on the appropriate STAR charts.

f) Minimum Runway Occupancy Requirements

i. Landing aircraft are reminded that prompt exit from the runway will enable ATC to apply minimum spacing on final approach and will minimise the risk of 'go-arounds'. Pilots of landing aircraft are therefore requested to vacate the runway via the first available taxiway corresponding to operational requirements or as directed by ATC.
ii. With the exception of Code D and above aircraft, the preferred exit after landing on Runway 27 is Mike. Pilots shall only attempt to vacate at Sierra when they have obtained permission from East Midlands Tower during final approach.
iii. After landing on Runway 09, unless there is reasonable assurance of slowing in time to vacate at Sierra, landing aircraft are requested to keep their speed up and vacate the runway via Whiskey. During Runway 09 operations, permission to vacate at Sierra does not need to be obtained from ATC prior to landing.
iv. Pilots are reminded that taxiways Sierra and Mike are unsuitable for Code D and above aircraft.

g) Approach with Radar Control

i. Aircraft will be radar vectored for an intermediate approach profile that should allow a low power/low drag continuous descent approach to be carried out. To achieve this profile, pilots should plan to be at FL 100 and 250 KT by 35 NM from touchdown, reducing to 250 KT-220 KT by 6000 FT ALT 20 NM from touchdown. Estimated track distance will be given to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the glidepath at the appropriate height for the distance without level flight.

ii. For planning purposes, 35 NM from touchdown equates approximately to the following positions:.

Runway	From the South	From the North
09	28 NM N of DTY 17 NM DME from I-EMW	VEGAR 26 NM DME from I-EMW
27	VELAG 28 NM DME from I-EME	Abeam TNT 16 NM DME from I-EME

h) Approach without Radar Control

i. When traffic is not being sequenced by Surveillance Radar, aircraft will be cleared from the holding facility to carry out the approach procedure appropriate to the runway-in-use, as detailed at AD 2-EGNX 7-10 to 7-11.

2 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Standard Instrument Departure Procedures are detailed at AD 2-EGNX-6-1 to AD 2-EGNX-6-3.

Note: *Due to the removal of the DTY/TNT DVORs, SIDs as detailed at AD 2-EGNX-6-1 and 6-2 are only available to aircraft that are RNAV 1 compliant.*

b) Departure Speed Restriction: In order to optimise the departure flow and assist in the separation between successive departing aircraft, a speed limit of 250 KT IAS below FL 100 is applicable until removed by ATC. ATC may remove the speed restriction by using the phrase 'No ATC Speed Restriction'. Pilots are reminded that this phrase does not relieve the pilot of the responsibility to adhere to the ground track of the Noise Preferential Route, which may require a speed/power limitation.

c) If for any reason pilots are unable to comply with the 250 KT IAS speed restriction the pilot should immediately advise ATC and state the minimum speed acceptable. If a pilot anticipates before departure that they will be unable to comply with the speed restriction, they should inform ATC when requesting start-up clearance, stating the minimum speed acceptable. In this case the pilot will be informed before take-off of any higher speed limitation.

d) After departure aircraft must not change frequency until instructed.

e) Aircraft that operate consistently outside the noise preferential route can be subject to a penalty as stated in the airport fees and charges document.

Note: *For monitoring purposes, a departure will be deemed to have complied with the Noise Preferential Routeing (NPR) if, in the portion of flight below the 5000 FT vectoring altitude, it is properly recorded by the airport's noise and track-keeping (NTK) system as having flown wholly within the Lateral Swathe (LS). The LS is defined from the centre-line of the relevant route coded in the NTK system, based upon a map accredited for this purpose by the Department for Transport, by the closer to the route centre-line depicted on the map of (a) a pair of lines either side, each diverging at an angle of 10° from a point on the runway centre-line 2000 M from start-of-roll; and (b) a pair of parallel lines representing a distance of 1.2 KM either side of the route centre-line. For avoidance of doubt, the depicted route and LS may include curved sections representing turns.*

3 RADIO COMMUNICATIONS FAILURE PROCEDURE

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1 para 3.4.

b) Initial Approach: as per Loss of Communications on chart AD 2.EGNX-5-1.

c) Intermediate/Final Approach: as per Loss of Communications on chart AD 2.EGNX-5-1.

d) The route to be used when leaving the CTR/CTA in accordance with this procedure is as follows:

Position at time of decision	Route
NDB EME or NDB EMW	Track 350°MAG at 3000 FT ALT

4 VFR AND SPECIAL VFR FLIGHT

a) Pilots inbound to East Midlands under VFR will be instructed to report at one of the VRPs, where they will either be given a route to follow or will be identified by radar and directed into the approach sequence. If inbound aircraft are not being radar directed and direct routings are, for traffic reasons, not available, to expedite arrival, the route to follow offered to pilots after reporting at a VRP will be:

VRP	Route
Church Broughton (Disused AD) Trowell (M1 Service Area) Bottesford (Disused AD)	Via Long Eaton Entry Lane
Melton Mowbray (Disused AD) M1 Junction 22 (Markfield) M42 Junction 11 (Measham)	Via Shepshed Entry Lane

b) Clearances may be requested for Special VFR flights within the CTR and will be given whenever the traffic situation permits. These flights are subject to the general conditions laid down at ENR 1.2.

Note: *Pilots holding a Private Pilots Licence (Aeroplanes) are reminded of the visibility requirements for Special VFR flights laid down in Schedule 7 of the Air Navigation Order 2009 and in the related notification at ENR 1-4-6, note 4, paragraph d.*

c) Aircraft may be given a radar service whilst within the Zone if, due to the traffic situation, ATC considers it advisable. It will remain the responsibility of the pilot to remain at all times in flight conditions which will enable him to determine his flight path and to keep clear of obstacles, and to ensure that he is able to comply with SERA.3105 Minimum Heights, SERA.5010 Special VFR in control zones and ENR 1.2 paragraph 1.3(l). Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.

5 VISUAL REFERENCE POINTS (VRP)

a) Church Broughton (Disused AD), M1 Junction 22 (Markfield) and M42 Junction 11 (Measham) - all below 2500 FT ALT.
b) Pilots routeing via Bottesford (Disused AD) should avoid overflying the area around Langar aerodrome, which is designated as an area of intense parachuting activity.
c) Pilots routeing via Melton Mowbray (Disused AD) are advised of the proximity of the TV mast at Waltham on the Wold as it has a high elevation – See ENR 5.4 dataset for up to date details of ICAO AREA 1 Obstacles.
d) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

6 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside East Midlands Controlled Airspace within the area defined by straight lines joining successively the following points and maintaining a listening watch only on East Midlands Radar frequency, 134.180 MHz, are encouraged to select SSR code 4572.

530412N 0015647W - 524800N 0015216W -
523440N 0013300W - 522846N 0012550W -
523452N 0002500W - 525320N 0002420W -
530850N 0004047W - 530818N 0013320W -
530412N 0015647W.

b) Selection of code 4572 does not imply receipt of an ATC service. Pilots of aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of controlled airspace.

c) Whilst squawking 4572, pilots should be aware that East Midlands Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.

d) When a pilot ceases to maintain a listening watch, code 4572 shall be deselected.

7 ENTRY/EXIT LANES

a) Conditions of Use

i. To permit aircraft to operate to and from East Midlands Aerodrome in IMC but not under IFR the following entry/exit lanes have been established for use, under the conditions stated, as follows:

1. A lane 3 NM wide, known as the LONG EATON Lane, with centre-line the M1 Motorway, extending from the point where the Motorway crosses the northern boundary of the CTR (Junction 25), southwards to a point at which it crosses the extended centre-line of Runway 09/27.
2. A lane 3 NM wide, known as the SHEPSHED Lane, with centre-line the M1 Motorway, extending from the point where the Motorway crosses the southern boundary of the CTR (Motorway Junction 23), northwards to a point at which it crosses the extended centre-line of Runway 09/27.

ii. Use of the lanes is subject to SVFR clearance being obtained from East Midlands ATC;
iii. Aircraft using the lanes must remain clear of cloud and in sight of the surface, not above 2000 FT (QNH);
iv. An aircraft using a lane shall keep the centre-line on its left, unless otherwise instructed by ATC for separation purposes;
v. Pilots of aircraft are responsible for maintaining adequate clearance from the ground or other obstacles

b) In order to expedite the arrival and departure of light aircraft in VMC use of these lanes by such aircraft operating under VFR is also recommended. Use of the lanes for this purpose, irrespective of prevailing weather conditions, remains subject to clearance being obtained from ATC.

AERO INFO DATE 24 AUG 26

INTENTIONALLY BLANK

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1501
HEIGHTS IN FEET AGL (1001)

EAST MIDLANDS

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 525742N 0012817W - 525800N 0011144W thence clockwise by an arc of a circle radius 8NM centred on 525000N 0011121W to 524201N 0011059W - 524143N 0012726W thence clockwise by an arc of a circle radius 8NM centred on 524942N 0012751W to 525742N 0012817W, except;

b) **2100** in the sector defined by the lateral limits; 524150N 0012147W thence clockwise by an arc of 3NM radius centred on 524230N 0011659W to 524200N 0011207W - 524150N 0012147W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3000**, or last assigned level if higher to **NDB(L) EMW** for RWY 09 approaches or **NDB(L) EME** for RWY 27 approaches†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) EMW** for RWY 09 approaches or **NDB(L) EME** for RWY 27 approaches†.

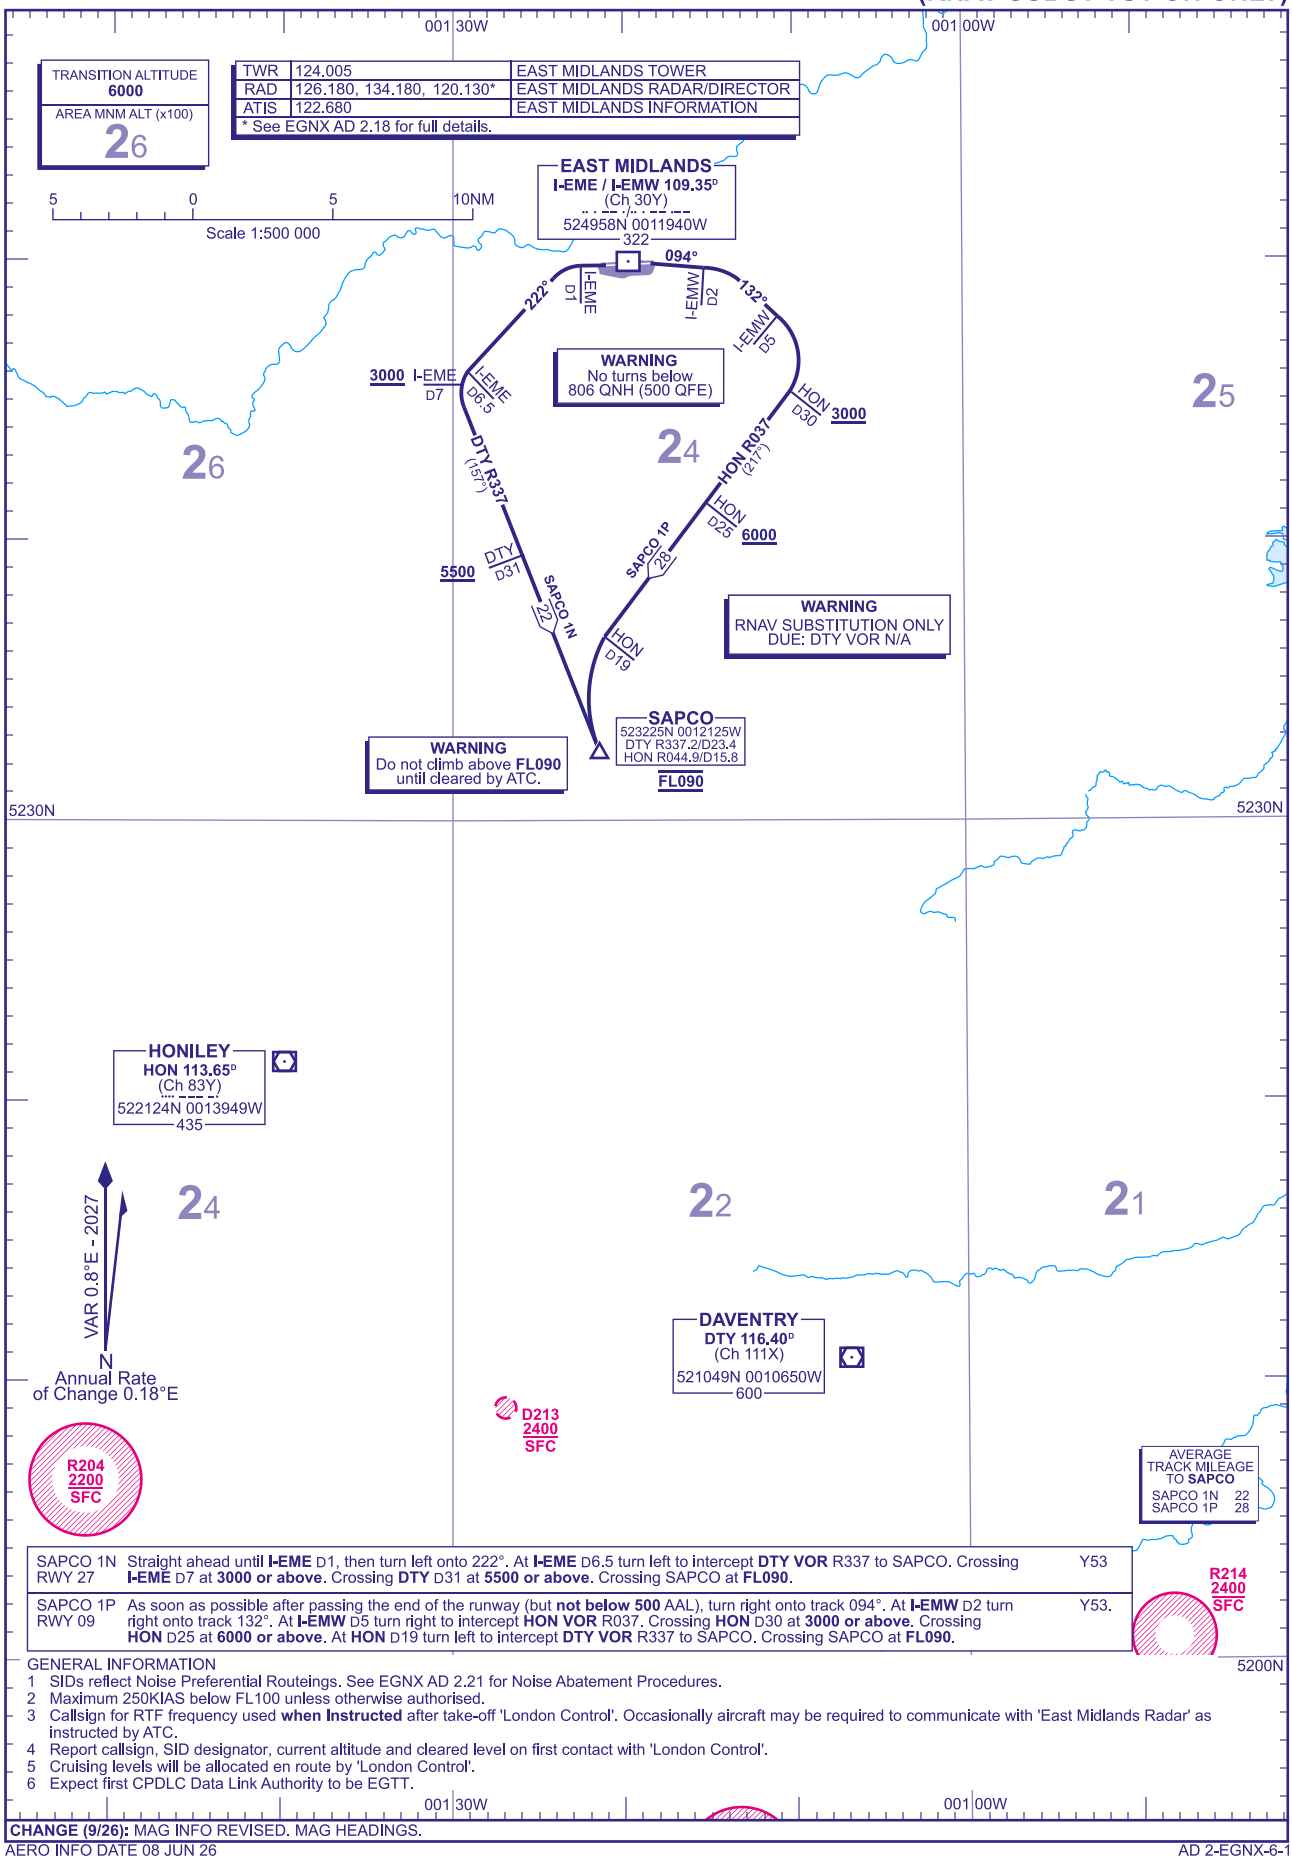
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. The ATC Surveillance service is provided by Primary and/or Secondary Radar equipment.
7. **Thls chart may only be used for cross-checklng of altltudes assigned when In receipt of an ATC Surveillance servlce.**
8. **When vectorlng an aircraft wlthln the FInal Approach Vectorlng Area descent clearance below the SMAA to the FAVA altltude may only be Issued If the aircraft Is elther establlshed on the flnal approach track or on an Intercept of 40° or less, and Is cleared to Intercept the flnal approach track.**
9. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
10. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (9/26): MAG INFO UPDATED.

AERO INFO DATE 02 JUN 26



AD 2-EGNX-5-1

INTENTIONALLY BLANK

STANDARD DEPARTURE CHART - INSTRUMENT (SID) - ICAO

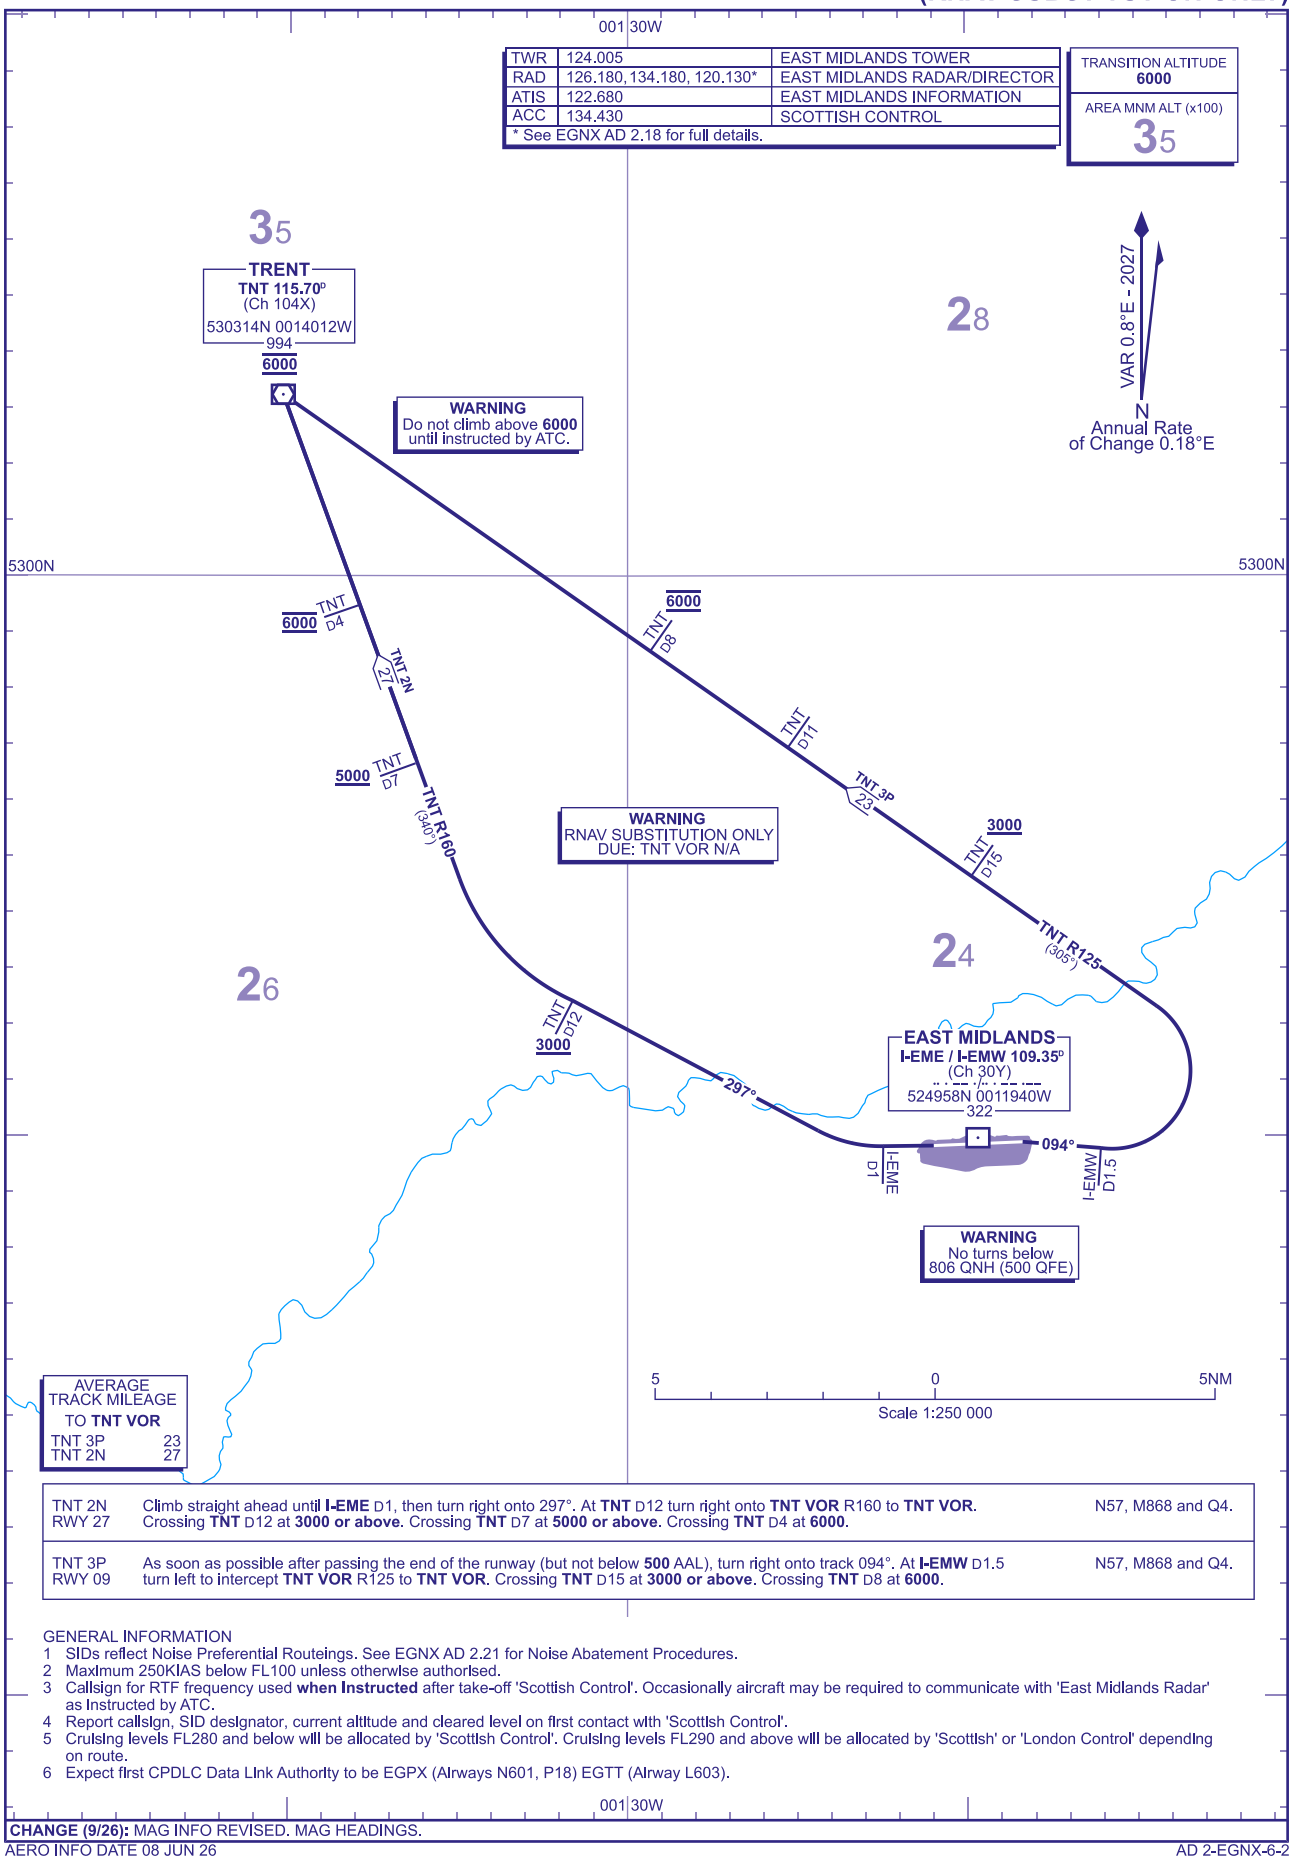
DISTANCES IN NAUTICAL MILES
BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ALTITUDES AND ELEVATIONS IN FEET

EAST MIDLANDS SAPCO (RNAV SUBSTITUTION ONLY)

SAPCO 1N RWY 27	Straight ahead until **I-EME** D1, then turn left onto 222°. At **I-EME** D6.5 turn left to intercept **DTY VOR** R337 to SAPCO. Crossing **I-EME** D7 at **3000 or above**. Crossing **DTY** D31 at **5500 or above**. Crossing SAPCO at **FL090**.	Y53
SAPCO 1P RWY 09	As soon as possible after passing the end of the runway (but **not below 500** AAL), turn right onto track 094°. At **I-EMW** D2 turn right onto track 132°. At **I-EMW** D5 turn right to intercept **HON VOR** R037. Crossing **HON** D30 at **3000 or above**. Crossing **HON** D25 at **6000 or above**. At **HON** D19 turn left to intercept **DTY VOR** R337 to SAPCO. Crossing SAPCO at **FL090**.	Y53.

GENERAL INFORMATION

1 SIDs reflect Noise Preferential Routeings. See EGNX AD 2.21 for Noise Abatement Procedures.
2 Maximum 250KIAS below FL100 unless otherwise authorised.
3 Callsign for RTF frequency used **when Instructed** after take-off 'London Control'. Occasionally aircraft may be required to communicate with 'East Midlands Radar' as instructed by ATC.
4 Report callsign, SID designator, current altitude and cleared level on first contact with 'London Control'.
5 Cruising levels will be allocated en route by 'London Control'.
6 Expect first CPDLC Data Link Authority to be EGTT.



CHANGE (9/26): MAG INFO REVISED. MAG HEADINGS.

AERO INFO DATE 08 JUN 26

STANDARD DEPARTURE CHART - INSTRUMENT (SID) - ICAO

DISTANCES IN NAUTICAL MILES
BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ALTITUDES AND ELEVATIONS IN FEET

EAST MIDLANDS TRENT (RNAV SUBSTITUTION ONLY)

TNT 2N RWY 27	Climb straight ahead until **I-EME** D1, then turn right onto 297°. At **TNT** D12 turn right onto **TNT VOR** R160 to **TNT VOR**. Crossing **TNT** D12 at **3000 or above**. Crossing **TNT** D7 at **5000 or above**. Crossing **TNT** D4 at **6000**.	N57, M868 and Q4.
TNT 3P RWY 09	As soon as possible after passing the end of the runway (but not below **500** AAL), turn right onto track 094°. At **I-EMW** D1.5 turn left to intercept **TNT VOR** R125 to **TNT VOR**. Crossing **TNT** D15 at **3000 or above**. Crossing **TNT** D8 at **6000**.	N57, M868 and Q4.

GENERAL INFORMATION
1 SIDs reflect Noise Preferential Routeings. See EGNX AD 2.21 for Noise Abatement Procedures.
2 Maximum 250KIAS below FL100 unless otherwise authorised.
3 Callsign for RTF frequency used **when Instructed** after take-off 'Scottish Control'. Occasionally aircraft may be required to communicate with 'East Midlands Radar' as Instructed by ATC.
4 Report callsign, SID designator, current altitude and cleared level on first contact with 'Scottish Control'.
5 Cruising levels FL280 and below will be allocated by 'Scottish Control'. Cruising levels FL290 and above will be allocated by 'Scottish' or 'London Control' depending on route.
6 Expect first CPDLC Data Link Authority to be EGPX (Airways N601, P18) EGTT (Airway L603).

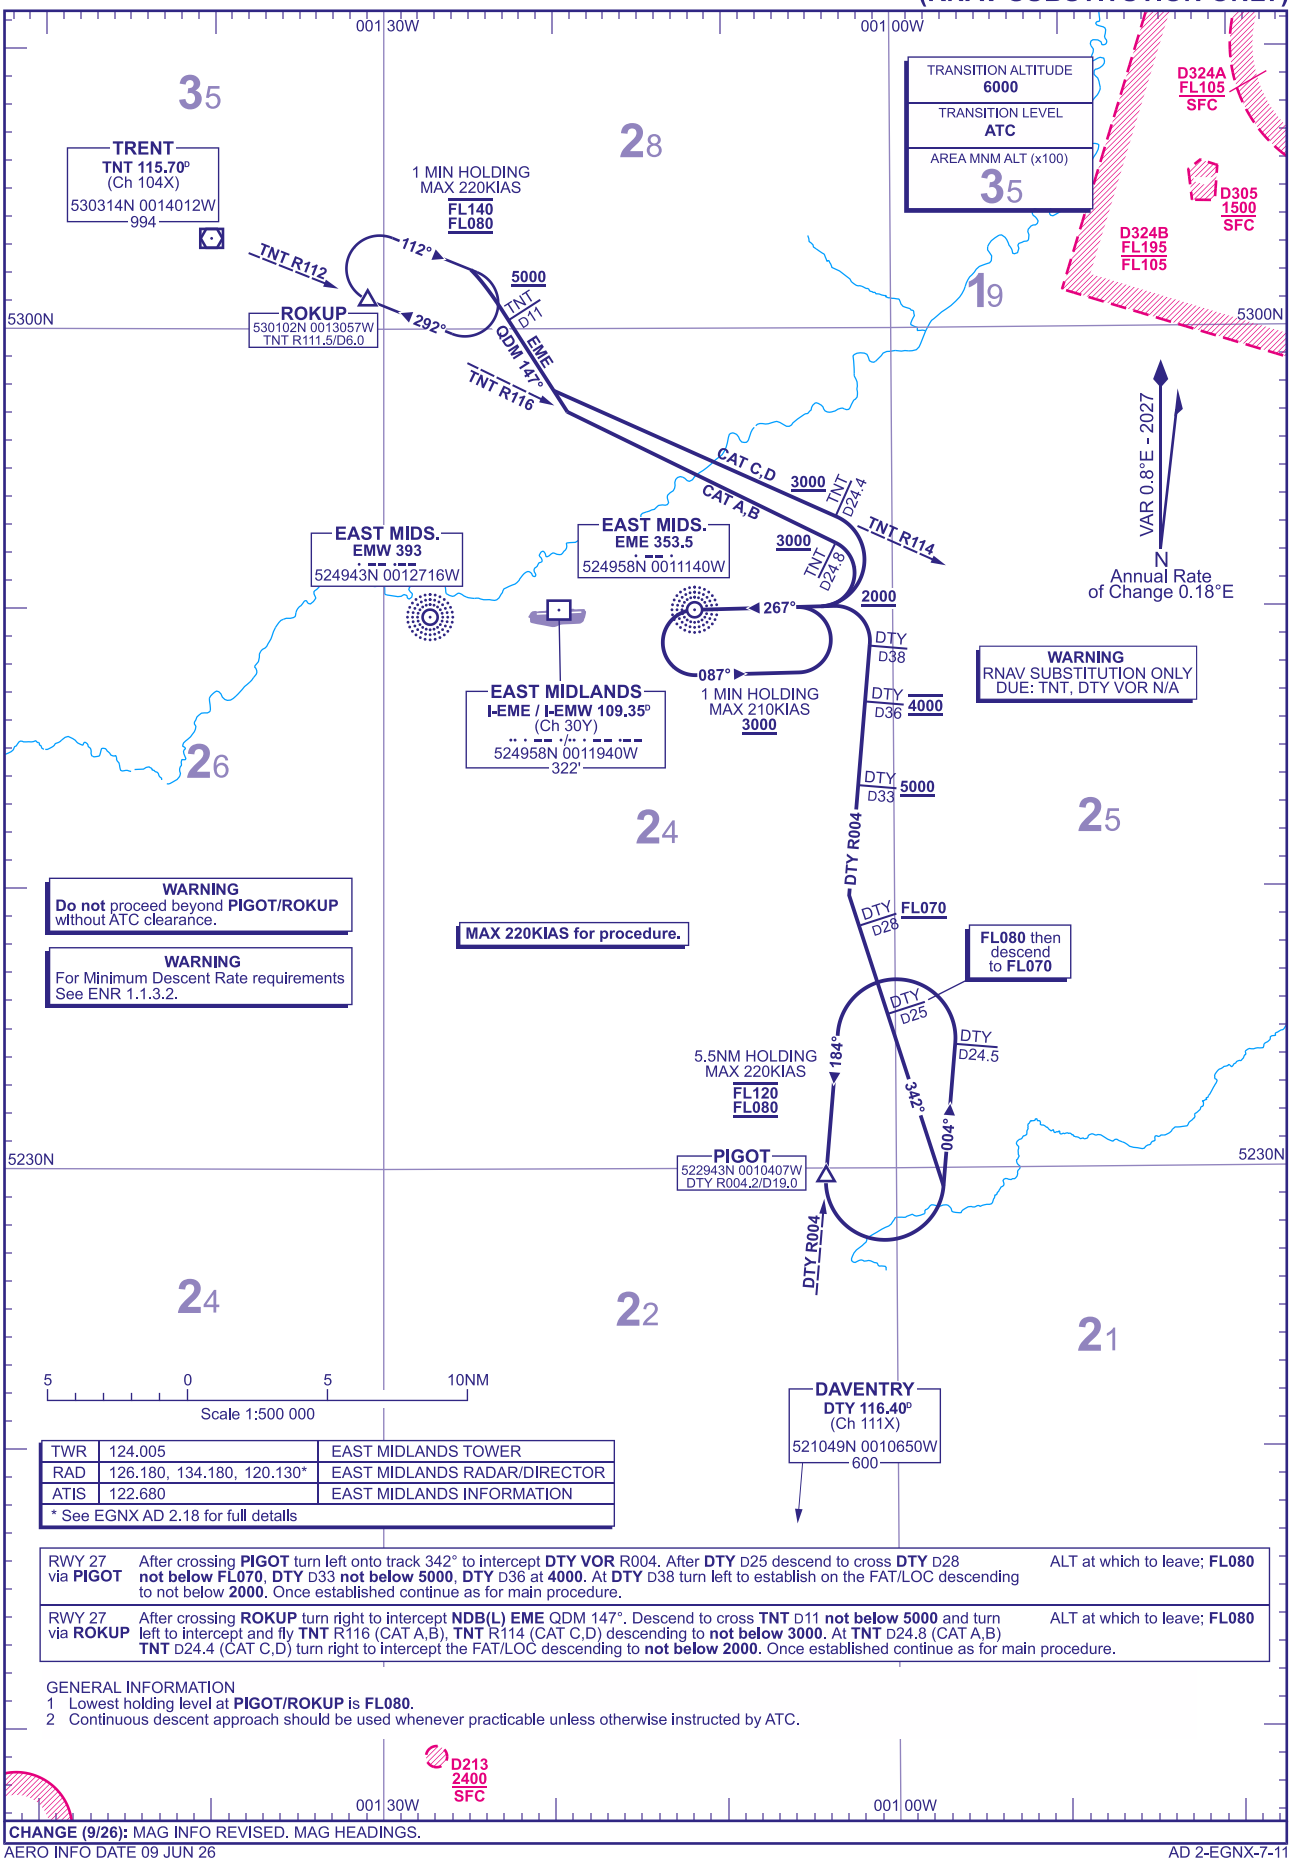
ATIS	122.680	EAST MIDLANDS INFORMATION

* See EGNX AD 2.18 for full details

RWY 09 via **PIGOT**	After crossing **PIGOT** turn left onto track 342° to intercept **DTY VOR** R004. After **DTY** D25 descend to cross **DTY** D28 **not below FL070**, **DTY** D33 **not below 5000**, **DTY** D36 at **4000**. At **DTY** D38 turn left to **NDB(L) EME**, then proceed to **NDB(L) EMW**. Continue as for alternative procedure, descending to **3000**.	ALT at which to leave; **FL080**
RWY 09 via **ROKUP**	After crossing **ROKUP** turn right to intercept **NDB(L) EME** QDM 147°. Descend to cross **TNT** D11 **not below 5000** and **NDB(L) EME at 4000**. On crossing **NDB(L) EME** carry out standard join to return to **NDB(L) EME** then proceed to **NDB(L) EMW**. On crossing **NDB(L) EMW** descend to **3000** and continue as for alternative procedure.	ALT at which to leave; **FL080**

GENERAL INFORMATION
1 Lowest holding level at **PIGOT/ROKUP** is **FL080**.
2 Continuous descent approach should be used whenever practicable unless otherwise instructed by ATC.



CHANGE (9/26): MAG INFO REVISED. MAG HEADINGS.

AERO INFO DATE 09 JUN 26

INITIAL APPROACH PROCEDURES
ILS/DME RWY 27

DISTANCES IN NAUTICAL MILES
TRACKS ARE MAGNETIC
ALTITUDES AND ELEVATIONS ARE IN FEET

EGPH AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Arriving and departing crew whom are unfamiliar with EGPH should notify ATC prior to taxiing. Apart from the GA Apron, nose-in parking in operation on all aprons. All nose-in stands have stand number, yellow centre-line and Stand Entry Guidance System. Stand Entry Guidance is provided by AGNIS/Stop Arrow (painted on the apron) or Safedock Docking Guidance System. Flight crew should be familiar with the guidance available and have an understanding on how they operate. Marshalling service is provided for the GA Apron and Stands 21, 23, 28, 99, 101, 308, 309, 310, 310L, 310R, 311, 311L, 311R, 312, 312L, 313, 314, 315, 316, 317 and 317A.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 06/24: Runway designation, runway centre-line and threshold markings. Touchdown zone and fixed distance markings. Runway edge markings and displaced threshold arrows. Runway light(s): Lights are LED. Taxiway light(s): Green centre-line lighting with blue edge lights on sharp curves, red stop bars at holding points. Runway exits have alternate green/yellow centre-line lights to the CAT II/III stop bars. Runway guard lights on accesses to runway.
3	Stop bars and runway guard lights (if any)	Stopbars at runway entrance points are in operation H24.
4	Other runway protection measures	Aircraft parked on the GA Apron may start engines and taxi from a nose out position. Flight and ground crew must ensure that roadways etc are protected against any jet blast/prop wash.

5	Remarks	Aircrew are to note that the Stand Entry Guidance (SEG) on all SEG equipped stands is activated by an apron level timer device, operated by airline/handling agent staff. Pilots should not turn off the taxilane centre-line unless the Stand Entry Guidance is illuminated with aircraft type, or a marshaller has signalled clearance to proceed. Pilots should note that failure to adhere to this instruction may lead to a negative "On Time Performance" figure. On stand taxi speed should not exceed 5 KT. All operators must ensure that their engineering staff and/or handling agents have suitable, serviceable equipment on station to push and/or tow aircraft which they might operate. Obstacle markings and snow edge markings are provided where necessary. Three WDIs serve Runway 06/24: 555650.75N 0032221.86W (LGTD) - 555634.84N 0032306.76W (LGTD) - 555710.67N 0032120.95W (LGTD). If an aircraft has been repositioned to face out on any stand, it must be either repositioned to nose-in on stand or towed out to the taxiway centre-line before starting engines. Flight crews should be aware that chart providers may not highlight taxilanes on their published aerodrome chart and taxiways on their published parking/ docking chart. When transiting to/from the allocated parking position, aircraft will transit both taxiways and taxilanes.

EGPH AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Edinburgh CTR.
b) All flights, except General Aviation and Military flights, are subject to the prior approval of the Chief Executive Officer, Edinburgh Airport Ltd (EAL) and prior notification to Airport Coordination Ltd, who act as an agent for the airport. Requests for ad-hoc slot allocations should be made to ACL during working hours Mon-Fri 0830-1700 (0730-1600) by email: lonacxh@acl-uk.org; or Tel: +44 (0)161-493 1850, Fax: +44 (0)161-493 1853, or at all other times to EAL Airside Operations on Tel: +44 (0)131-344 3139. OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com/default.aspx?AspxAutoDetectCookieSupport=1
c) Fixed-wing and rotary aircraft using Edinburgh Airport do so in accordance with the Conditions of Use document available on request from Edinburgh Airport Ltd. Tel: +44 (0)844 481 8989 or www.edinburghairport.com/cou
d) Use by aircraft not able to communicate with ATC by radio is subject to prior permission from ATC.
e) A handling agent (an EAL licensed airline operator or handling agent based at Edinburgh) is a requirement for all flights including general aviation, cargo, military and helicopter movements. All operators, including executive and private general aviation, must make prior arrangements with a handling agent for the ground handling of all flights. Due to limited parking space all aircraft are PPR with their handling agent.
f) Pilots of international arriving or departing General Aviation aircraft are responsible for presenting their passengers to the UK Border Agency. Transport to and from the control authority facilities will be provided by the handling agent.
g) Airline operators are requested to note that stand availability is extremely limited, particularly at night and for large wide-bodied aircraft.
h) The use of the airport is also subject to the limitations imposed by the night noise limitations.
i) It is a requirement that every airline using Edinburgh Airport must have local orders compatible with the EAL Emergency Orders. Airlines, General Aviation operators and Flying Clubs should also note that it is their responsibility to recover disabled aircraft and aircraft wreckage and have appropriate arrangements in place before commencing flying operations into the airport. EAL will act as the co-ordinating body throughout the recovery operation and has only very limited equipment which might be used to salvage disabled aircraft.
j) Aircrew can request ATC departure clearance from EOBT-25. Departing aircraft on first contact with Edinburgh ATC must state aircraft type, stand number and the code letter of the latest ATIS received.
k) Crews should be in receipt of departure clearance prior to requesting push and start.
l) ATC departure clearance by Data Clearance Link (DCL) is available at Edinburgh for suitably equipped aircraft. DCL must be compliant with ARINC 623-2 and Eurocae ED 85-A. DCL is available as follows: **Winter** - All flights from EOBT-25 minutes. **Summer** - Flights with EOBT between 0500Z and 0700Z, EOBT-22 minutes otherwise from EOBT-25 minutes. DCL clearances may not be issued if requested later than EOBT+15 minutes.
Successful clearances must be accepted within 5 minutes of receipt or a '**REVERT TO VOICE**' message will be received. If any data errors are detected by the system or the controller, a '**REVERT TO VOICE**' message will be received.
If the attempt to obtain a clearance is unsuccessful the aircraft should revert to voice RTF.
m) Crews should request start up clearance only when fully ready to push. This should include doors and hatches closed, steps or air bridge removed, tug attached and communications established with ground crew with confirmation that they are ready. To prevent back of stand vehicle traffic congestion, anti-collision beacons should only be switched on once start clearance has been obtained. Where a push-back is to take place with no headset communication between ground crew and aircraft commander, ATC must be advised of this prior to push-back clearance being requested.
n) Aircraft commanders should not request taxi clearance until all ground crew have vacated the taxilane.
o) When on airside external areas, Flight crew and Cabin Crew are required to wear a fully fastened high visibility jacket or tabard.

2 GROUND MOVEMENT

a) Arriving and departing crew whom are unfamiliar with EGPH should notify ATC prior to taxiing. All stands are nose-in/push-back. Aircraft on the GA Apron may be turned to face nose out. Aircraft parked on the GA Apron may start engines and taxi from a nose out position. Flight and ground crew must ensure that roadways etc are protected against any jet blast/prop wash. Pilots requiring services on Apron areas, including Customs and Immigration, must ensure that a suitable tow-bar is available.
b) General Aviation (GA) aircraft requiring UK Border Agency clearance may be initially directed to the passenger apron. Passengers will be taken to the main passenger terminal for UK Border Agency clearance by their handling agent. When all necessary formalities have been completed, aircraft will be required to reposition to an alternate parking location. GA aircraft not requiring UK Border Agency inspection may taxi directly to their allocated parking area.

c) Aircrews are advised that there is a short section of parallel taxiway incorporating Lima 1 to Lima 2 and Mike 1 to Mike 2 to enable ATC to pass aircraft. Aircraft must remain on the yellow centre-lines to maintain the required minimum wing-tip clearances and should ensure that they understand the routeing given by ATC, particularly at night when both taxiway centre-lines and associated curves are illuminated. The taxiways are clearly delineated by internally illuminated signs and painted ground markings where it has not been possible to provide signs.
d) At all times, aircrew are responsible for their wingtip separation and, if in any doubt, should stop, hold position and request marshaller assistance. At either end of the Taxiway Alpha, passing places (V and W loops) have been provided to allow aircraft to hold and/or pass aircraft holding on the Taxiway Alpha. Aircraft may pass other aircraft at these locations only when both aircraft concerned have a wingspan of less than 36 M.
e) Airlines/Aircraft Operators should be aware that stand availability prior to operational first wave is extremely limited and aircraft arriving off schedule prior to first wave are likely to either hold or be allocated any aircraft compliant stand, including non-contact, as they become free.

3 CAT II/III OPERATIONS

a) Runway 06 and 24, subject to serviceability of the required facilities, are suitable for Category II/III operations by operators whose minima have been accepted by the Civil Aviation Authority.
b) During Category II and III operations special ATC procedures (ATC low visibility procedures) will be applied. Pilots will be informed by RTF when these procedures are in operation.
c) Departing Aircraft: Aircraft must not obstruct the Fire Service access road to Runway 06/24 between Holds A10 and A11.
d) Arriving Aircraft: Pilots should delay the call 'Runway vacated' until the aircraft is established on Taxiway Alpha and past the coded taxiway centre-line.
e) No intersection departures from Bravo and Charlie.

4 WARNINGS

a) Pilots are warned that there is a large bird population around the aerodrome and to expect the possibility of increased bird activity in the lower airspace, together with visible evidence of deterrent activity in the form of shell crackers being fired.
b) Steel plate in place on Echo Taxiway, 15 metres south of E2 and 10 metres West of the Echo Taxiway centreline.

5 HELICOPTER OPERATIONS

a) All helicopter arrivals and departures are via Runway 06/24.
b) Arrivals - ATC shall direct traffic to the designated parking area and thereafter will advise on hover/taxiing requirements.
c) Departures – As directed by ATC.

6 USE OF RUNWAYS

a) The declared distances promulgated for the Bravo and Charlie taxiway intersections are taken at the intersection of the downwind edge of the specified taxiway with the runway centre-line. An appropriate adjustment for a line up allowance must additionally be made by aircrew.
b) Minimum Runway Occupancy Times

i. Departures

1. On receipt of line up clearance, pilots should, commensurate with safety and standard operating procedures, line up on the runway without delay.
2. Whenever possible, cockpit checks should be completed prior to line up and any checks requiring completion whilst on the runway should be kept to the minimum required. Pilots should ensure that they are able to commence the take off roll as soon as clearance is issued.
3. Pilots not able to comply with these requirements should notify ATC as soon as possible once transferred to the Edinburgh Tower frequency.

ii. Arrivals

1. Pilots are reminded that rapid exit from the runway will enable ATC to apply minimum spacing on final approach to achieve maximum runway utilisation and will minimise the risk of 'go-arounds'.
2. Standard Taxi Routes - After landing pilots must follow the appropriate Standard Taxi Route to the clearance limit specified in the table below. ATC Instruction will not normally be given for aircraft vacating at A1, B1 and D1.

Runway Exit Used	Clearance Limit	Via
A1	A8	TWY A
B1	A12	TWY B and TWY A
C1	As Instructed by ATC (Normally A15 or A16)	TWY C and TWY A
D1	A18	TWY D and TWY A

c) Code E/F aircraft must vacate the runway at the end (via A1 or D1) unless escorted by "follow-me" vehicle.

7 TRAINING

a) Flight Training and/or test flying is permitted subject to prior liaison with, and the agreement of EGPH ATC.

EGPH AD 2.21 NOISE ABATEMENT PROCEDURES

All aircraft inbound to or outbound from this aerodrome are required to conform to the following procedures, notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

a) Any aircraft using the aerodrome shall be operated in such a way that it will not cause a noise reading of more than 94 dBA Lmax by day 0600-2330 (0500-2230) or 87 dBA Lmax by night 2330-0600 (2230-0500) at the relevant noise monitoring terminal(s); the measured noise reading for the event will be taken as the highest recorded at any single noise monitoring terminal.

The sites of the aircraft noise monitoring terminals relating to Edinburgh Airport are:

- EDI 01 - Houston Industrial Estate, Livingston. NT 0620 6903 - *555418N 0033006W;
- EDI 02 - Scottish Power, Broxburn. NT 0924 7061 - *555508N 0033202W;
- EDI 03 - Cramond Kirk Manse, Cramond. NT 1902 7650 -*555829N 0031757W.

b) For visual approaches to Runway 06/24 the following limitations will apply:

i. Propeller driven aircraft whose MTWA does not exceed 5700 KG will not join the final approach to the runway below 1000 FT AAL.
ii. All visual approaches from the south to Runway 24 by aircraft with an MTWA in excess of 5700 KG are to be made from a position not less than 7 NM DME on the extended centreline. Aircraft are not to descend below 2000 FT QNH until after crossing the Firth of Forth coastline northbound. All visual approaches from the north to Runway 24 by aircraft with an MTWA in excess of 5700 KG are to be made from a position not less than 4 NM DME on the extended centreline. Aircraft approaching Runway 06 are to join the extended runway centreline at a height of not less than 1500 FT.

c) With the exception of aircraft in an emergency, between the hours of 2230-0630 (2130-0530), no visual approaches to Runway 06/24 are permitted for IFR aircraft. All IFR aircraft to carry out ILS approaches under ATC control.
d) Aircraft using the ILS shall not descend below 3000 FT (Edinburgh QNH), unless instructed by ATC, before intercepting the glidepath nor thereafter fly below it. Aircraft landing without assistance from ILS or radar shall follow a descent path which will not result in their being at any time lower than the nominal ILS glidepath.
e) The Noise Preferential Routeings specified in the following table are compatible with ATC requirements and the tracks are to be flown by all departing jet aircraft and by all other departing aircraft of more than 5700 KG MTWA unless otherwise instructed by ATC or unless deviations are required in the interests of safety.
f) Noise Preferential Routes must be strictly adhered to. Direct routeings etc offered by ATC should only be taken up after completion of the NPR, unless a mandatory instruction is given or an emergency situation prevails.

Take-off Runway	ATC Clearance	Procedure
06	Via TLA VOR	Climb straight ahead to I-VG D0.5 or 635 QNH, whichever is earlier, then turn left to track 042 then at I-VG D7 turn right onto track 142. At TLA VOR R022 (I-VG/ I-TH D12) turn right to intercept TLA VOR R024 to TLA VOR. NPR terminates at TLA VOR D30.
	Via SAB VOR or NATEB	Climb straight ahead to I-VG D0.5 or 635 QNH, whichever is earlier, then turn left to track 042 then at I-VG D7 turn right towards SAB or NATEB. **Warning:** Pilots are reminded that UK Danger Area EGD512B lies on the direct track from the end of the NPR to NATEB. NPR terminates at I-VG D7.
	Via GRICE	Climb straight ahead to I-VG D0.5 or 635 QNH, whichever is earlier, then turn left to track 042. At I-VG D3 turn left onto SAB VOR 285. Cross SAB D46 above 4500 (5.1%). NPR terminates at 3000.
	Via GOSAM (P600/UL612)	Climb straight ahead to I-VG D0.5 or 635 FT QNH, whichever is earlier, then turn left to track 042. Then At I-VG D3, turn left onto GOW VOR R076 to CUMBO. Cross GOW D35 at 5000 or above (8%). Cross GOW D30 at 6000. NPR terminates at 6000.
	Other Routes	Climb straight ahead to I-VG D0.5 or 635 QNH, whichever is earlier, then turn left to track 042, until I-VG D7 before turning on course. NPR terminates at I-VG D7.

Take-off Runway	ATC Clearance	Procedure
24	Via TLA VOR	Climb straight ahead to UW NDB. At I-TH D7 turn left onto TLA VOR R343 to TLA VOR. NPR terminates at I-TH D7.
	Via SAB VOR or NATEB	Climb straight ahead to UW NDB. At UW NDB turn left towards SAB VOR or NATEB. NPR terminates at 3000.
	Via GOSAM (P600/UL612)	Climb straight ahead to UW NDB. At UW NDB turn right onto UW NDB QDR 260 to MAVIX. Cross I-TH D9.5 at or above 4500 (7.7%). Cross I-TH D14 at 6000 (6.6%). NPR terminates at 6000.
	Via GRICE	Climb straight ahead to UW NDB. At UW NDB turn right onto TLA VOR R350. At TLA D32 turn left to intercept TLA VOR R345 to GRICE. Cross TLA D33 at or above 4000 (3.4%). NPR terminates at 3000.
	Other Routes	Climb straight ahead to UW NDB or 3000, whichever is earlier, before turning on course. NPR terminates at 3000.

g) For environmental reasons, aircraft commanders are requested to avoid the use of reverse thrust/pitch, between the hours of 2300-0600 (2200-0500).
h) With the exception of Military aircraft, aircraft which do not meet the standards specified in Part II, Chapter 3 of Volume 1 ICAO Annex 16 will not be permitted to operate to/from Edinburgh Airport.

EGPH AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Terminal Arrival Routes (STARs). The standard routes for inbound aircraft to Edinburgh are shown at AD 2.EGPH-7-1, AD 2.EGPH-7-2, AD 2.EGPH-7-3, AD 2.EGPH-7-4, AD 2.EGPH-7-5 and AD 2.EGPH-7-6.

b) **Inbound procedure other than via the ATS route network.**

i. Aircraft wishing to enter the CTR/CTA under IFR direct from the FIR must observe the normal procedure for joining Controlled Airspace. For aircraft joining from the North or Northeast, clearance via GRICE to L UW for Runway 06 or direct to L EDN for Runway 24 should be anticipated.
ii. Pilots inbound to Edinburgh under VFR must contact Edinburgh Approach Control prior to entering the CTR/CTA and may be required by ATC to route via the published Visual Reference Points.

c) **Speed**

Speeds published on the STARs should be adhered to unless ATC advise otherwise. Aircraft below FL100 should adhere to the speed limit of Max 250 KT. Tactical speed control may be applied by ATC as required. Pilots unable to comply with speed control must inform ATC Immediately stating the minimum speed acceptable.

2 APPROACH PROCEDURES WITH RADAR CONTROL

a) When Edinburgh inbound traffic is being sequenced by Radar, the Approach Procedures will be flown under directions from the Approach Radar Controller and will consist of that part of the approach between the Terminal Holding Fix and the Final Approach Path. When Holding procedures are not in use, radar sequencing may commence before the Terminal Holding Fix.
b) Pilots should plan their flight profile in such a manner as to be able to achieve the Minimum Holding Level at the appropriate holding point if so required.
c) When an aircraft is under Approach Radar Control, changes of heading or Flight Level/Altitude will be made only on instructions from the Radar Controller except in the case of radio communication failure in the aircraft or at the Radar Unit.
d) Headings and Flight Levels/Altitudes at which to leave the holding areas will be passed by ATC. Radar vectors will be given and descent clearance will include an estimate of track distance to touchdown. Further distance information will be given between the initial descent clearance and intercept heading to the ILS.
e) Speed Control may be applied on a tactical basis to the extent determined necessary by the Radar Controller. Aircraft unable to conform to the speeds specified by the Radar Controller should inform him immediately and state what speeds will be used. In the interests of accurate spacing pilots are requested to comply with speed adjustments as promptly as is feasible within their own operational constraints, and should advise ATC if circumstances necessitate a change of speed for aircraft performance reasons.
f) GPWS – Owing to the terrain profile to the south of Edinburgh, GPWS warnings are possible on intermediate approach to Runways 06 and 24.

3 APPROACH PROCEDURES WITHOUT RADAR CONTROL

a) When inbound traffic is not being sequenced by Radar, aircraft will be cleared from the Terminal Holding Facility via EDN or UW NDB to carry out an Instrument Approach Procedure appropriate to the landing direction.

b) When Runway 06 is in use, in order to expedite traffic, aircraft may be transferred from TARTN or STIRA holding pattern to UW NDB holding pattern prior to carrying out the Instrument Approach Procedure.
c) When Runway 24 is in use, in order to expedite traffic, aircraft may be transferred from TARTN or STIRA holding pattern to EDN NDB holding pattern prior to carrying out the Instrument Approach Procedure.
d) No visual approaches to Runway 06/24 are permitted for IFR aircraft between 2230-0630 (2130-0530). All IFR aircraft are to carry out a published Instrument Approach Procedure under ATC control with the exception of aircraft in emergency. This allows the continued operation when the CVCR is in use and ILS approaches are not available.

4 NOISE ABATEMENT CONTINUOUS DESCENT APPROACH PROCEDURES FOR TURBO-JET/ PROP AIRCRAFT

a) Turbo-jet and turbo-prop aircraft approaching Edinburgh Aerodrome will be expected to conform to the continuous descent and low-power, low-drag approach procedures. To facilitate this technique, aircraft should fly within the speed bands detailed at Paragraph 1, item d. In the interest of accurate spacing, ATC may request specific speeds and pilots are requested to comply with any speed adjustments as promptly as is feasible within their own operational constraints. If circumstances necessitate, a speed change for aircraft performance reasons, ATC should be advised accordingly.
b) Headings and Flight Levels/Altitudes will be passed by the Radar Controller. Aircraft will be radar vectored either from the holding facility or following transfer of control from the Area Control Unit to Edinburgh Approach. ATC will advise pilots of an estimate of the track distance to run to touchdown when clearance to descend below the Transition Altitude is given. Further information on the distance from touchdown will be given between this descent clearance and the instruction to turn onto the intercept heading to the ILS localizer.
c) On receipt of descent clearance the pilot will descend at the rate he judges will be best suited to a continuous descent, the object being to join the glidepath at the appropriate height for the distance, without recourse to level flight. Pilots are reminded that due to high ground southeast of the airport, descent below 3000 FT QNH will be in accordance with AD 2-EGPH-5-1
d) In the event of radar failure, new instructions will be issued to each aircraft under radar control and the procedures as defined for approach without radar control will be put into effect.
e) Military Jet aircraft – Radar vectoring for ILS approach is mandatory for military fast jet aircraft.

5 RADIO COMMUNICATIONS FAILURE PROCEDURES

In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedures notified at ENR 1.1, subsection 3 with the exceptions detailed below.

a) When complete communication failure occurs in the aircraft before ETA or before EAT when this has been received and acknowledged, the aircraft will:

   i. Fly to the appropriate holding point;
   ii. hold at the last assigned level until the last acknowledged ETA plus 10 minutes or EAT when this has been given;
   iii. then commence descent for landing in accordance with the procedure detailed on the Instrument Approach charts and effect a landing within 30 minutes (or later if able to land visually).

b) If complete radio communication failure occurs after an aircraft has reported to ATC on reaching the holding point, the aircraft will:

   i. Maintain the last assigned holding level at the appropriate holding point until:

      1. ATA over holding point plus 10 minutes or 10 minutes after the last acknowledged communication with ATC, whichever is the later; or
      2. EAT when this has been received and acknowledged;

   ii. then commence descent for landing in accordance with the procedure detailed on the Instrument Approach charts and effect a landing within 30 minutes (or later if able to land visually).

c) In the event of complete radio failure in an aircraft which has been cleared for an IFR inter-aerodrome flight within the Scottish TMA the pilot will adopt the appropriate procedure as follows, depending upon the phase of flight:

   i. If the aircraft is receiving a radar service and is within the ATCSMAC of the destination aerodrome, the pilot will adopt the appropriate loss of communication procedure for the runway-in-use as detailed in the ATCSMAC information at AD 2-EGPH-5-1. Landing must be effected within 30 minutes (or later if able to land visually);
   ii. If the aircraft is **either** not receiving a radar service or is receiving a radar service but has not yet arrived within the ATCSMAC of the destination aerodrome, the pilot will proceed to the appropriate holding point at the destination aerodrome at the last assigned level or 4000 FT whichever is higher. He will then adopt the procedures in paragraph's 5a or 5b.

d) The route and altitude to be used when leaving the CTR/CTA in accordance with the procedures at ENR 1.1, subsection 3 are shown in the table; the route to be followed is dependent on the position of the aircraft at the time the decision to leave the CTR is made.

Position at time of decision	Route
Edinburgh Airport EDN or UW NDB	Track 025°T from facility at 4000 FT ALT until crossing the Edinburgh CTR Boundary.

6 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Non-Airways IFR departing flights from Edinburgh routeing in the open FIR to the north or northeast should anticipate ATC clearance normally at an altitude below 6000 FT.

7 SPEED LIMIT

a) A speed limitation of 250 KT applies to all departures following SIDs whilst flying below FL 100 unless previously removed by ATC. ATC will endeavour to remove the speed limitation as soon as possible and will use the phrase 'No speed restriction'. The phrase must not be interpreted as relieving the pilot of his responsibility for the observance of any noise abatement procedures which may include a speed/ power limitation.

8 VFR FLIGHTS

a) VFR flights in the Control Zone will be given routeing instructions and/or altitude restrictions in order to integrate VFR flights with other traffic.
b) Pilots should anticipate routeing instructions via the Visual Reference Points detailed in paragraph 10 or the routes detailed in paragraph 11.
c) Pilots of VFR flights are reminded of the requirement to remain in VMC at all times and to comply with the relevant parts of SERA and the Rules of the Air Regulations 2015, and must advise ATC if at any time they are unable to comply with the instructions issued.
d) **Helicopters:** Whenever possible helicopter flights in the Edinburgh Control Zone will be cleared on direct routeings under VFR (or, when requested at night, on Special VFR clearance in accordance with the procedures for Special VFR flights)

9 SPECIAL VFR CLEARANCE

a) Clearance may be requested for Special VFR flight within the Edinburgh Control Zone and will be given whenever the traffic situation permits. These flights are subject to the general conditions laid down for Special VFR flights (ENR 1.2 refers).
b) Special VFR clearance will include routeing and maximum altitude instructions and may not necessarily be confined to the Entry/Exit Lanes detailed at paragraph 11.
c) Pilots are reminded that they must at all times when operating on Special VFR clearance, remain clear of cloud and in sight of the surface and in flight conditions which will enable them to determine their flight path and keep clear of obstacles. Due to the nature of the terrain in the vicinity of Edinburgh Airport radar vectoring will not normally be applied to aircraft operating on Special VFR clearance.
d) Pilots are reminded that a Special VFR clearance applies only to flight within the CTR and does not extend to flight within the surrounding Airspace of the Scottish Terminal Control Area.
e) Special VFR clearance will not normally be granted for flights operating in VMC or for flights by aircraft exceeding 5700 KG MTWA.

10 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

11 GLIDING OPERATIONS KIRKNEWTON

a) Gliding operations - Edinburgh CTR

i. Gliding operations are carried out at RAF Kirknewton by 661 Volunteer Gliding Squadron (VGS). Activity is co-ordinated with ATC and gliders can be expected in the agreed Delegated Gliding Area.
ii. The RAF Kirknewton Delegated Gliding Area (DGA) is defined by the lateral limits:

1. 555320N 0032415W – 555338N 0032053W (Ravelrig Road rail bridge between Balerno & Dalmahoy) – 555121N 0032048W (Western corner of Threipmuir Reservoir) – 554959N 0032545W (Eastern corner of Harperigg Reservoir) – 555211N 0032601W thence clockwise by an arc of a circle radius 1.3 NM centred on 555213N 0032401W to 555320N 0032415W.
2. Up to 2500 FT AMSL, this is known as DGA-circuit.
3. Up to 3700 FT AMSL, this is known as DGA-soaring.

iii. ATC may tactically manage traffic to avoid the area if appropriate.
iv. ATC will advise other aircraft of gliding activity as appropriate.

12 ENTRY/EXIT LANES

a) To permit aircraft to operate to and from Edinburgh Airport in IMC but not under IFR the following entry/exit lanes have been established for use, under the conditions stated, as follows:

i.

1. a lane 3 NM wide, known as the Polmont Lane, with centre-line the M9 Motorway extending from Grangemouth (near the western boundary of the Edinburgh Control Zone) eastwards, via the Polmont Roundabout, Linlithgow Loch and Philpstoun to a point at which it joins the Edinburgh Aerodrome Traffic Zone;
2. a lane 3 NM wide, known as the Kelty Lane, with centre-line the M90 Motorway extending from Kelty (near the northern boundary of the Edinburgh Control Zone) southwards to M90 Junc 1B, then with the centre-line the A9000 across the Forth Road Bridge to M90 Junc 1, then with the centre-line the M90 Motorway to a point at which it joins the Edinburgh Aerodrome Traffic Zone;

ii. use of the lanes is subject to clearance being obtained from ATC Edinburgh, irrespective of prevailing weather conditions. This clearance is to be obtained by non-radio equipped aircraft before take-off and by radio equipped aircraft before entering the lane;
iii. aircraft using the lanes must remain clear of cloud and in sight of the ground or water, not above 2000 FT (Edinburgh QNH), and in flight visibility of not less than 3 KM;

iv. an aircraft using a lane shall keep the centre-line on its left, unless otherwise instructed by ATC for separation purposes. In these circumstances ATC will pass traffic information to the aircraft concerned;
v. pilots of aircraft are responsible for maintaining adequate clearance from the ground or other obstacles.

b) Additionally, to permit the effective integration of traffic, flights operating in VMC and under VFR may be required by ATC to follow these routes as detailed in paragraph 8.

13 AERODROME OPERATING MINIMA - NON-PUBLIC TRANSPORT FLIGHTS: REFER TO AD 1.1 SUBSECTION 4 BEFORE APPLICATION

Approach Lighting Category	Runway	Approach Aid	OCH (FT) Acft CAT A See IAC for other CATs	Minima	
				DH/MDH (FT) Caution See AD 1.1 subsection 4	RVR (M)
1	2	3	4	5	6
Runway 06 Full	06	ILS/DME	135	250	600
	06	LOC/DME (also without DME)	480	480	1000
	06	NDB(L)/DME (also without DME)	580	580	1000
Runway 24 Full	24	ILS/DME	145	250	600
	24	LOC/DME (also without DME)	440	440	900
	24	NDB(L)/DME (also without DME)	500	500	1000

14 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside Edinburgh controlled airspace within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Edinburgh Radar frequency, 121.205 MHz, are encouraged to select SSR code 0440.

553627N 0035327W - 553648N 0024753W -
560117N 0023955W - 561156N 0025112W -
561150N 0034633W - 555724N 0035417W -
554806N 0035411W - 553627N 0035327W.

b) Selection of code 0440 does not imply receipt of an ATC service. Pilots of aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of controlled airspace.
c) Whilst squawking 0440, pilots should be aware that Edinburgh Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 0440 shall be deselected.

EGPH AD 2.23 ADDITIONAL INFORMATION

a) For wildlife hazard management purposes, a bird scaring laser is deployed and utilised by the Airside Operations team.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1938
HEIGHTS IN FEET AGL (1030)

EDINBURGH

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2600** in the sector defined by the lateral limits: 560412N 0034039W - 561030N 0032203W thence anti-clockwise by an arc of a circle radius 3NM centred on 561253N 0031848W to 561005N 0031656W - 561146N 0030923W thence clockwise by an arc of a circle radius 11.5NM centred on 560024N 0031217W to 555321N 0025608W - 555843N 0031708W - 555652N 0034958W thence clockwise by an arc of a circle radius 11.5NM centred on 555424N 0033000W to 560412N 0034039W.

b) **2600** in the sector defined by the lateral limits: 561030N 0032203W thence clockwise by an arc of a circle radius 11.5NM centred on 560024N 0031217W to 561146N 0030923W - 561005N 0031656W thence clockwise by an arc of a circle radius 3NM centred on 561253N 0031848W to 561030N 0032203W.

c) **3000** in the sector defined by the lateral limits: 555652N 0034958W - 555843N 0031708W - 555321N 0025608W thence clockwise by an arc of a circle radius 11.5NM centred on 560024N 0031217W to 555033N 0030147W - 554435N 0031927W thence clockwise by an arc of a circle radius 11.5NM centred on 555424N 0033000W to 555652N 0034958W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3000**, or last assigned level if higher to **NDB(L) EDN**†, except for RWY 06, in which case proceed to **NDB(L) UW**.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) EDN**†, except for RWY 06, in which case proceed to **NDB(L) UW**.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4 or the procedure for Scottish TMA & Edinburgh CTR detailed at (EGPH AD 2.22).

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (6/26): MAG INFO REVISED.

INTENTIONALLY BLANK

EGTR AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Terms and conditions of use are available on request from the aerodrome operator.
b) Aerodrome not available to aircraft unable to communicate by radio.
c) Gliders, para dropping and banner towing are not permitted.
d) High visibility clothing is mandatory airside.

2 GROUND MOVEMENT

Not applicable

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Distance between taxiway centre-lines and the nearest obstruction is generally only 10.5 M. Pilots are to taxi with extreme caution.
b) HT cables, 95 FT AAL running east-west approximately 0.3 NM north of Runway 08/26.
c) HT cables, running north - south approximately 0.21 NM from the threshold of Runway 08.

d) Pilots are to exercise caution when operating on the helipad due to the proximity of other helicopters and aerodrome furniture. Helicopters may use the helipad provided they have procedures in place to allow safe operations. Public transport helicopter flights using the helipad must be compliant with company operating manuals.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Only Runway 26 is licensed for night use.

7 TRAINING

Not applicable

EGTR AD 2.21 NOISE ABATEMENT PROCEDURES

a) Circuits variable in accordance with noise limitation schedule.

EGTR AD 2.22 FLIGHT PROCEDURES

1 CIRCUITS

a) Standard overhead join. Variable circuits. Fixed wing circuit height 1000 FT QFE.

2 DEPARTURES

a) Runway 26 - After take-off maintain runway heading until crossing the M1 motorway, at the motorway junction turn right to re-cross the M1. Follow the M1 until 1 NM before the junction with the M25 then continue en-route.
b) Runway 08 – After take-off maintain runway heading for 1 NM before turning left to avoid all built up areas.

3 HELICOPTER OPERATIONS

a) Helicopters are to arrive and depart from the ATZ via specific entry/exit point. Pilots should check with aerodrome operator prior to flight.
b) Circuit height 750 FT AGL.

4 HELICOPTER ROUTE ENTRY/EXIT POINTS

a) Alpha: 514024N 0002216W;
Bravo: 514031N 0001657W;
Charlie: 513830N 0001930W.
b) Helicopter arrivals to position to the northern grass at 500 FT QFE.

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

EGTR AD 2.23 ADDITIONAL INFORMATION

1 Three footpaths traverse the aerodrome:

a) A permissive footpath running along the northern aerodrome boundary;
b) A public right of way running north/south to the west of Runway 08 threshold;
c) A public right of way across Runway 26/08 west of the helipad (infrequently used).

EGAB AD 2.20 LOCAL AERODROME REGULATIONS

1 AERODROME REGULATIONS

a) Aerodrome not available to aircraft unable to communicate by radio unless the pilot has received prior permission.

2 GROUND MOVEMENT

a) Taxiways C and D only available to aircraft with a wingspan of less than 12 m.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) HT cables 27 ft aal running east-west, 0.18 nm from Runway 14 threshold.
High ground and trees either side of the runway.
b) High ground and trees to the west of the Aerodrome.
c) Aircraft landing on Runway 14 may experience crosswinds from the southwest.
d) Operating aircraft should be aware of a right of way road crossing situated 110 m north of the Runway 32 threshold. The crossing is available H24 and is controlled by airport staff during operational hours only.

5 HELICOPTER OPERATIONS

a) Helicopter training takes place on the grass parallel to Runway 14/32.
b) Helicopter movements will also occur to/from Runway 14/32.
c) Helicopter circuits are to be flown parallel to the runway in use at 800 ft.
d) Helicopters must obtain specific permission to cross Runway 14/32.

6 USE OF RUNWAYS

Not applicable

7 TRAINING

Not applicable

EGAB AD 2.21 NOISE ABATEMENT PROCEDURES

Not applicable

EGAB AD 2.22 FLIGHT PROCEDURES

a) Circuit directions: Runway 14 - right hand; Runway 32 - left hand. Circuit height 1000 ft agl. Helicopter and microlight circuit height 800 ft agl.
b) Low Level circuits are permitted, but only for the purposes of practising bad weather flying.
c) The Turn Out after take-off, Touch and Go, Overshoot or Turn On to final approach should not be below 300 ft.
d) Non-standard procedures required for training purposes will only be permitted when the traffic situation allows.

8	Fuelling	AVTUR JET A-1: As per AD hours. AVGAS 100LL: Mon-Fri 0800-1800 (0700-1800), Sat 0900-1700 (0700-1700), Sun 0900-1700 (0800-1800).
9	Handling	As per AD hours. All movements outside published aerodrome administration hours incur an extra charge and are subject to availability. For bookings contact Ground Handling or XLR Executive Jet Centres.
10	Security	As per AD hours.
11	De-icing	By arrangement via Ground Handling.
12	Remarks	PPR is mandatory outside of published aerodrome administration hours. For aircraft movements outside these hours contact Ground Handling or XLR Executive Jet Centres.

EGTE AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Bulk and ULD handling. Main deck hi-loader (pallet) 7000 kg, forklift. Limited facilities for outward cargo. Contact XLR Executive Jet Centres.

2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL Total Aero oil W80 and W100.
3	Fuelling facilities/capacity	AVTUR JET-A1 via bowser, AVGAS 100LL via self service/served pumps (see remarks).
4	De-icing facilities	Available. Contact Ground Handling.
5	Hangar space for visiting aircraft	Limited. Contact XLR Executive Jet Centres.
6	Repair facilities for visiting aircraft	Major for light aircraft. Minor for other aircraft.
7	Remarks	AVGAS 100LL. Only aircraft with a wingspan not exceeding 15 M are permitted to use the AVGAS installation, a maximum of three aircraft are permitted at any one time. No AVGAS 100LL bowser is available. Aircraft must call ATC prior to leaving the fuelling apron. For helicopters see AD 2.20. Self service AVGAS available to Exeter based and self serice card holders during aerodrome opening hours. Fuel opening hours apply to non-card holders and visiting aircraft.

EGTE AD 2.5 PASSENGER FACILITIES

1	Hotels	In the vicinity.
2	Restaurants	Licensed Restaurant, Cafe, Bar, Conference facilities.
3	Transportation	Buses, taxis and car hire. Nearest railway station: Exeter St. Davids and Tiverton Parkway
4	Medical facilities	Limited first aid treatment.
5	Bank and Post Office	Bureau de Change. ATM in Terminal.
6	Tourist Office	Tourist information is available at the Information desk.
7	Remarks	Executive lounge available via XLR Executive Jet Centres.

EGTE AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 It is a condition of the use of the aerodrome that fire cover outside the published opening hours will be provided to the level required for the size and type of aircraft operating and requiring the use of a certificated aerodrome. RFF Category 6, RFFS provision will be provided for all scheduled movements at the appropriate category up to RFF Category 7. Category 8 and Category 9 upon request.
2	Rescue equipment	3x Cobra major fire appliances.
3	Capability for removal of disabled aircraft	Light / medium aircraft can be removed using on site resources. Larger aircraft can be removed using outside sources in conjunction with the aircraft operator. Contact 01392 447433.
4	Remarks	-

EGTE AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical de-icing.
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Exeter Airport's policy on clearing a contaminated runway will always be to clear back to a blacktop. Braking action readings/estimates derived from the use of Continuous Friction Measuring Equipment (CFME) or any other source will not be available. If the runway is open, operating procedures will promulgate information in accordance with Global Reporting Format (GRF) standard. Latest information from ATC 01392-354917.

EGTE AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	APRON 21 Surface: Asphalt PCR 220/F/B/Y/U APRON 22 Surface: Concrete PCR 271/R/B/X/U APRON 24 Surface: Asphalt PCR 253/F/B/Y/U MAIN APRON Surface: Concrete and asphalt PCR 524/R/B/X/U NORTH APRON Surface: Asphalt PCR 410/R/B/X/U SOUTH APRON Surface: Asphalt PCR 410/R/B/X/U
2	Taxiway width, surface and strength	Taxiway A: 15.1 M Surface: Asphalt PCR 409/F/B/X/U Taxiway APRON: 15.1 M Surface: Asphalt PCR 409/F/B/X/U Taxiway B: 23 M Surface: Concrete PCR 573/R/B/X/U Taxiway C: 15.1 M Surface: Asphalt PCR 409/F/B/X/U Taxiway D: 15.1 M Surface: Asphalt PCR 409/F/B/X/U Taxiway E: 7.5 M Surface: Asphalt PCR 220/F/B/X/U Taxiway F: 7.5 M Surface: Asphalt PCR 28/F/B/X/U Taxiway G: 17 M Surface: Asphalt PCR 409/F/B/X/U
3	Altimeter checkpoint location and elevation	Main Apron 102 FT.
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking Chart.

6	Remarks	Pilots are cautioned that Taxiways A and C are not suitable for use by aircraft whose wheelbase exceeds 18 M and whose wheelspan is greater than 9.1 M. Taxiway E is suitable for aircraft whose wheelbase is less than 7.5 M and wingspan less than 18 M and is available at night. Aircraft with a wingspan in excess of 20 M must be under tow. All aircraft using Taxiway E must exercise extreme caution due to the reduced obstacle clearances and vehicle movements. Taxiway F is suitable for aircraft up to 7.5 M wheelbase. Foxtrot 1 is not available at night. All aircraft using Taxiway F must exercise caution due to vehicle and helicopter movements. Taxiway G is suitable for use by code C aircraft to access the engine run and compass base facilities. Code D aircraft may use the taxiway by prior arrangement under tow. The grass parking is ordinarily available for use between April and October by light aircraft with a maximum wingspan of 12 M. Operators of light aircraft who cannot use the grass are requested to advise Flight Briefing prior to arrival so that appropriate parking arrangements can be made.

EGTE AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	All main apron stands are parking with marshaller guidance. No aircraft must enter a stand without being under positive marshaller control. If a marshaller is not present advise ATC and hold on the apron taxiway. Into wind parking is available dependent upon the wind direction and stand availability (ACFT may be required to hold for suitable parking). Requests for into wind parking should be made as early as possible via Exeter Dispatch or ATC in advance of arrival. Pilots are to ensure that minimum power is used when taxiing away from any into wind parking stand and are to turn as soon as practically possible to enter the apron taxiway. Pilots are cautioned, that all stands have an upward incline towards the South, which may necessitate the use of increased power when taxiing on to stand on Stands 4–6 and especially when operating under single engine manoeuvres.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 08/26: Runway designation, threshold, centre-line, fixed distance, touchdown zone and edge. Taxiway marking aid(s): Taxiway centre-line and holding positions. Enhanced taxiway centre-line markings and runway ahead designators at each runway hold. The apron taxilane between Taxiways Bravo and Charlie has green reflective studs along its centre-line for its entire length. Taxiway Echo has green reflective centre-line studs. Taxiway Golf has green centre-line and blue reflective edge studs. Reflective markers on edge of Taxiway Charlie at intersection with the South Apron. Taxiway light(s): Taxiways Alpha, Bravo and Charlie entrance to/exit from runway indicated by alternate green/amber centre-line lights. Green centre-line lighting on Taxiways Alpha, Bravo and Charlie. The apron taxilane between Taxiways Bravo and Charlie has blue edge lights on northern edge. Taxiways Echo, Delta, Foxtrot and Golf are not equipped with taxiway lighting.
3	Stop bars and runway guard lights (if any)	Stopbars in use during darkness and Low Visibility conditions at holding points Alpha 1, Bravo 1 and Charlie 1. Runway guard lights at Alpha 1, Bravo 1, Charlie 1, Delta 1 and Echo 1 taxiway intersections.
4	Other runway protection measures	-

5	Remarks	WDI: 504411.84N 0032422.21W (LGTD); 504348.86N 0032518.66W (LGTD). Obstacle marking. Runway ahead, enhanced taxiway centre-line and mandatory instruction marking are located at all holding points. Retroreflective intersection departure distance signs at Bravo 1 and Charlie 1. When operational, blue linlaners along edges of grass taxiway. No entry signs at intersection of grass parking area to grass taxiway.

EGTE AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Fixed wing aircraft with a MTOW of 1800 KG or higher; and rotary aircraft with a MTOW of 1000 KG or higher; and all Military, State or Flying Display aircraft are always subject to mandatory handling. Operators are required to book in advance of arrival +44 (0)1392-354995, e-mail: Jetcentre@xlrexeter.com (XLR Executive Jet Centres). The exceptions to this are as follows:

   i. Exeter based operators; in this instance it is the commander's responsibility to present to the Control Authorities any non-UK national as well as any other person/item required to be presented in accordance with current UK regulations as appropriate.
   ii. Aircraft that are arriving for maintenance with an Exeter based facility; operators of such flights are required to identify on their flight plan as a remark, the facility that they are booked to visit. It is the commander's responsibility to present to the Control Authorities any non-UK national as well as any other person required to be presented in accordance with current UK regulations as appropriate.
   iii. It always remains the aircraft operator's responsibility to notify the UK Control Authorities in advance of any applicable flight in line with current UK regulations.

b) Fixed wing aircraft with a MTOW of 1500 KG - 1799 KG requiring any duration parking on airport operated aprons/grass and/or Jet A1 fuel or any aircraft with MTOW less than 1499 KG requiring Jet A1 fuel, are always subject to prior permission (PPR). Booking via flight plan only or not via XLR is not accepted. A marshalling/transportation charge will be levied by XLR Exeter. Operators are required to book in prior to arrival via XLR Executive Jet Centres +44 (0)1392-354995; email: Jetcentre@xlrexeter.com. Exclusions as per points (a), (i) & (ii) above apply.

   i. All General Aviation aircraft that fall outside of the scope for mandatory handling are requested to book in with flight briefing in advance of arrival +44 (0)1392-354915, especially prior to filing a flight plan to arrive from outside the UK. The exception to this is as follows: Exeter based operators; in this instance it is the commander's responsibility to present to the Control Authorities any non-UK national as well as any other person required to be presented in accordance with current UK regulations.
   ii. It always remains the aircraft operator's responsibility to notify the UK Control Authorities in advance of any applicable flight in line with current UK regulations.

c) All commercial air transport operators should submit details of proposed flights and schedules to Airport Co-ordination Ltd, who act as an agent for the airport. Requests for ad-hoc slot allocations should be made to ACL during working hours 0830-1700 (0730-1600) Monday to Friday by SITA: LONACXH; e-mail: lonacxh@acl-uk.org; or Tel: +44(0)161-4931850, Fax: +44(0)161-4931853, or at all other times to Ground Handling +44 (0)1392-354957. OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com/

d) Ordinarily all persons walking on the manoeuvring and airport apron areas, including the grass and north side at Exeter Airport, must wear high visibility clothing at all times. The only exception to this rule is that aircraft commanders wearing high visibility clothing are permitted to escort their passengers who are not wearing the required clothing up to a maximum of 5 per group when not on the Main Apron. For maximum effect high visibility clothing should be correctly fastened. Pilots and passengers are to use appropriate walkways between aircraft parking areas and landside. A footpath to be used, runs from the western edge of the South Apron across Apron 24 and Taxiway Charlie to the access control point. Under no circumstances are flight crew or passengers to walk along any portion of Taxiway Charlie. It is the responsibility of the aircraft commander/handling agent to ensure the safety of passengers and crew at all times.

e) All communications for airport owned ground handling services from aircraft inbound or on the ground should be made via 131.680 MHz callsign Exeter Dispatch.

f) General Aviation and non-commercial aircraft under 2 tonnes landing at Exeter in an emergency diversion situation will have the landing fees waived. The pilot will be required to complete details of the event for the aerodrome records.

g) Pilots of aircraft types which require to use brake chutes on landing are to advise the AD operator in advance of the flight via Airfield Operations so that chute collection arrangements may be made. Pilots are requested to advise ATC of the intention to stream prior to landing as published in CAP413.

h) Aircraft using the aerodrome must be equipped with a radio.

i) Parachuting and aerobatics are not permitted at the aerodrome and prior permission must be granted by the aerodrome authority for any parachuting and aerobatic activities within the aerodrome traffic zone.

j) Aircraft using Exeter Airport do so in accordance with the aerodromes conditions of use, a copy of which is available on application or via the aerodrome website.

k) It is a requirement that every airline using Exeter Airport have local orders compatible with the aerodrome Emergency Orders. Airlines, General Aviation operators and Flying Clubs should also note that it is their responsibility to recover disabled aircraft and aircraft wreckage

and have appropriate arrangements in place before commencing flying operations into the aerodrome. The aerodrome will act as the coordinating body throughout the recovery operation and has only very limited equipment which might be used to salvage disabled aircraft.

l) Banner towing by aircraft is not permitted.
m) Smoking airside is prohibited.

2 GROUND MOVEMENT

a) All aircraft parked on the main apron are required to start under marshallers instructions.
b) All pilots must state their location on the aerodrome when requesting start up.
c) Pushback Procedures:

i. Pilots should give full callsign, type, parking area/apron and/or stand number.
ii. Pilots should only request pushback when the tug and push crew are connected to the aircraft and they are actually ready to do so.
iii. Pilots are required not to illuminate aircraft anti-collision beacons until such a time as a start-up/pushback approval has been received from ATC, and when parked on the main apron, positive communication with ground personnel has been achieved.
iv. Pilots must ensure that they are in receipt of a pushback clearance from ATC on the tower frequency before allowing ground crew to pushback the aircraft onto a taxiway from any location.
v. Aircraft pushback from aprons must be conducted so that the aircraft is facing the intended direction of travel as instructed by ATC. All code D aircraft or higher parked on a numbered stand will be pushed back onto the apron taxiway to face west and expect to use Taxiway Bravo.
vi. Aircraft pushing back must at all times be in communication (voice/hand signals) with an EDAL approved marshaller. Based aircraft maintenance companies are included within this approval. In the event that a non-standard pushback is required by flight crew, this must be approved in advance of the aircraft doors being closed by Airfield Operations.

d) During low visibility when the reported prevailing or minimum visibility, or touchdown IRVR decreases below 800 M stop bars will be illuminated at holding points Alpha 1, Bravo 1 and Charlie 1. Runway protection barriers shall be deployed on all other runway holding points to prevent unauthorised access to the runway. Any pilot wishing to depart from the North Apron during such circumstances must advise ATC minus 15 minutes of requesting start-up clearance, so that arrangements can be made to temporarily allow access for departure. When the reported prevailing or minimum visibility, or touchdown IRVR decreases below 400 M, for aircraft on the south side of the airfield the preferential departure runway is Runway 08 via holding point Alpha 1 (holding point Bravo 1 for code D/E aircraft). If Runway 26 is required (operational necessity only), aircraft on the Main Apron must be using taxiway Bravo. For aircraft on the north side of the airfield the preferential departure runway is Runway 26, via holding point Echo 1 or holding point Golf from the North Apron. Pilots are advised that increased separation and movement restrictions may also apply during such conditions.
e) Code C or higher aircraft are not permitted to carry out 180 degree turns on Runway 08/26 between the runway thresholds. All code C or higher types must use the Runway 08 loop or the Runway 26 turning circle as applicable.
f) When operational, the grass taxiway from Runway 08/26 to the grass parking is available as instructed for vacating the runway only. Aircraft departing the grass parking will be instructed to do so via the exit onto taxiway Charlie and then to the appropriate holding point for the runway in use.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Light aircraft should be aware of the elevated runway lights and PAPI for Runway 08/26.
b) Pilots are advised that bird concentrations may be present in agricultural and construction areas on approaches to runways and in the vicinity of the aerodrome. Deterrent measures within the airport boundary are carried out by a Bird Control Unit and pilots may be requested by ATC to delay departure or arrival if bird concentrations within the BCU's area of control prove difficult to disperse.
c) Pilots are warned, when landing on Runway 26, of the possibility of Terrain/Building induced turbulence and wind shear effects.
d) Gliding, parachuting, light aircraft and microlights operate at Dunkeswell and North Hill aerodromes (10 NM NE EGTE).
e) Aircraft in the Dunkeswell ATZ may operate less than 5 NM north of the Final Approach Track to Runway 26. Deconfliction minima against this uncoordinated traffic cannot be guaranteed. Pilots should expect late warning of aircraft leaving the Dunkeswell ATZ and deconfliction minima may not be achieved.
f) To ensure safe operations and obstacle clearance, aircraft nose wheels are to always be aligned with taxiway centre-line whilst taxiing or under tow. Where the taxiway width is less than the paved surface width, the portions outside the double yellow taxi side stripe markings are not maintained and shall not be used by aircraft. Pilots are cautioned that the width of Taxiway Alpha and Charlie varies from 15.1 M to 18.5 M and does not in all cases meet outer main wheel gear span criteria of DH4 aircraft and are to ensure that the aircraft nose wheels are always aligned with taxiway centre-line.
g) Pilots are warned that unauthorised ground based laser lights have been directed towards aircraft in the vicinity of the aerodrome. All incidents should be reported immediately via the Tower to the Airport Authority.
h) Pilots are cautioned of increased helicopter activity between Echo 1 and Foxtrot 1 and should remain vigilant at all times. ATC may hold taxiing aircraft on Echo and Foxtrot to allow priority helicopter departures.
i) Pilots are warned of helicopter activity in and out of the RD and E Hospital situated on the final approach to Runway 08 at 3.25 NM from touchdown.
j) Pilots are advised that grass areas adjacent to paved aprons are not to be used for aircraft manoeuvring or parking.
k) Pilots are advised that the drains located along the eastern edge of the South Apron are not weight bearing and all manoeuvring/parking must be to the west of the double yellow taxi side stripe markings at all times.
l) Any instructed turn on the runway is to be made with caution and in between the side stripe markings. Pilots are cautioned that elevated runway edge lighting is installed on the pavement edge outside of the side stripe.

5 HELICOPTER OPERATIONS

a) A designated area for light helicopters requiring AVGAS 100LL is available at the existing installation. Helicopters will only be permitted to land in this area during daylight hours and provided that there are no other aircraft using the pumps. ATC will designate an area for helicopters to hold if the pumps are in use.
b) Helicopters must approach the AVGAS installation from the northeast. When landing, helicopters must align with the 'H' facing west. Before refuelling commences, pilots must ensure that rotor blades are aligned with the fuselage, or so positioned as to not infringe taxiway C. Caution must be used at all times when manoeuvring in this area.
c) No rotors running refuels may take place on the airport from the airport authorities fuel bowsers, with the exception of those aircraft on SAR/Ambulance tasks, in accordance with the airports operational instructions available from the refuelling manager, Tel: 01392-354931.
d) Helicopters inbound/outbound are to avoid over flying airport buildings whenever possible.
e) Helicopters advised to park on an apron south of Runway 08/26 or on parking areas accessed via Taxiway Golf, will be directed by ATC to approach via the main runway, then to ground/air taxi to the allocated apron area and park under marshaller's instructions. Upon departure, helicopters parked on these apron areas will ground/air taxi from the allocated stand as directed by ATC to Runway 08/26 prior to lift off. It is required that helicopters with wheels will at all times ground taxi from/to the runway and pilots are to advise ATC prior to landing/or upon start up if this is not achievable due to aircraft specifications. Helicopters with a MTOW of less than 5000 KG may at times be advised to approach from the northern airfield boundary and land directly on the North Apron under marshaller's instruction.

6 USE OF RUNWAYS

a) When the surface wind is calm or light and variable, Runway 26 is the preferential runway. When Runway 08 is the runway-in-use, pilots should note that other aircraft may require Runway 26 for departure, due to performance limitations.
b) Pilots of light aircraft must advise ATC if a backtrack for departure from a taxiway intersection is required.
c) When the reported met visibility decreases below 400 M, for aircraft on the south side of the airfield the preferential departure Runway is 08 via holding point Alpha 1 (holding point Bravo 1 for code D/E aircraft). If Runway 26 is required (operational necessity only), aircraft on the main apron must be using taxiway Bravo. For aircraft on the north side of the airfield the preferential departure Runway is 26, via holding point Echo 1 or holding point Golf from the North Apron. Pilots are advised that increased separation and movement restrictions may also apply during such conditions.

7 TRAINING

a) Aircraft using the aerodrome for instrument training and circuits must book slots by telephone to ATC (01392-354917). CCT height 1000 FT AAL, variation on request to ATC.
b) Training by jet aircraft over 5700 KG may be denied after 2000 (1900).
c) Training by any aircraft after 2200 (2100) may be denied.
d) When Runway 08 is in use, training aircraft are expected to hold at TOMPO (504243N 0033319W). Holding at NDB 'EX' may be available for training aircraft but approaches from 'EX' may be subject to delay.

EGTE AD 2.21 NOISE ABATEMENT PROCEDURES

Aircraft using the aerodrome will be required to conform to the following procedures notwithstanding that these procedures may be departed from to the extent necessary for avoiding immediate danger.

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport, particularly the City of Exeter.
b) Unless otherwise required in the appropriate instrument approach procedure or otherwise instructed by ATC, inbound aircraft shall maintain as high an altitude as practicable and shall maintain at least 1000 ft aal, until commencing descent on final approach. An aircraft approaching without assistance from radar shall follow a descent path no lower than the normal approach path indicated by the PAPIs.
c) Unless otherwise instructed by ATC, all jet aircraft and propeller aircraft whose MTWA exceeds 5700 kg shall after take-off from:

    i. Runway 26 climb on runway heading at the maximum rate compatible with safety to 1000 ft aal and then turn as soon as possible to avoid the City of Exeter.
    ii. Runway 08 climb at the maximum rate compatible with safety to 1500 ft aal before turning.

d) For visual approaches, or following a visual circuit, to Runway 26 the following limitations apply:

    i. Jet aircraft shall not join the final approach at a height of less then 1500 ft aal;
    ii. Propeller driven aircraft whose MTWA exceeds 5700 kg shall not join the final approach at a height of less than 1000 ft aal.

    Aircraft flying a visual approach should intercept the final approach track at a level not less than that equivalent to a 3.5° glide path at the intercept range. Final approach should be flown at not less than a nominal 3.5° glide path.

e) Auxiliary Power Units (APU).

    APUs may only be operated for a maximum of one hour, or started thirty minutes prior to departure and not without the permission of the aerodrome operator. Aircraft with rear ventral airstairs must shut down APUs immediately after arriving on stand. Ground Power Units (GPU) will be supplied where required.
f) Light aircraft should avoid overflying the villages of Clyst Honiton, Broadclyst, Whimple, West Hill, Aylesbeare and Farringdon whenever possible or as otherwise directed by ATC.
g) Continuous Descent Approaches

i. Jet and turbo-prop aircraft are expected to apply continuous descent, low power, low drag approach techniques whenever possible.
ii. Subject to ATC instructions, inbound aircraft are to maintain as high an altitude as practical and adopt a low power, low drag, continuous descent approach profile. ATC will provide estimated track distance to touchdown to allow pilots to descend at a rate they judge best suited to achieve continuous descent without using more power or drag than necessary. The object will be to join the glidepath at the appropriate height for the distance without level flight.
iii. ATC will provide range checks. Pilots who require additional track mileage to facilitate a successful CDA should inform ATC as soon as possible

EGTE AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

2 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

3 PROCEDURE FOR INBOUND FLIGHTS

a) **IFR Arrivals and Overflights**

i. Arrivals are to establish communications with ATC at least 10 minutes prior to ETA at NDB(L) EX, whenever possible, stating what type of service they require (deconfliction, traffic or basic, as appropriate).

b) **VFR Arrivals and Overflights**

i. Joining, or overflight instructions, may be issued with a level restriction e.g. 'Not below 1500 FT', in order to facilitate integration into the circuit or to assist in deconflicting from other traffic. Such a restriction does not absolve pilots from any requirement they may have to remain in VMC at all times and pilots must advise ATC if unable to comply with the level restriction.
ii. Arriving or overflying VFR flights should avoid the instrument approach let-down areas and the departure climb outs at all times, unless ATC have indicated there is no traffic to affect. ATC may suggest a route or track to assist pilots in this, which may also be combined with a level restriction.
iii. Overflying VFR aircraft are advised that the area to the immediate east and west of Exeter Airport is where holding patterns are established. They are frequently used by aircraft flying according to IFR.

4 PROCEDURES FOR OUTBOUND AIRCRAFT

a) **VFR Departures**

i. VFR departures may be requested to fly a route to assist in deconflicting traffic and aid circuit integration; e.g. 'Depart to the south east, due instrument traffic'. Such restrictions will be removed by ATC as soon as is practicable, and do not absolve pilots from any requirement they may have to remain in VMC at all times. Pilots must advise ATC if unable to comply with a level or routing request.
ii. Aircraft on local flights (departing and landing back at Exeter) should specify either the cardinal or intermediate track they wish to fly on departure on either book-out or first contact with ATC (i.e. ‘local to north-west…’).

b) **IFR Departures**

i. IFR departures should inform ATC prior to departure which ATC service they will be requesting on departure, i.e. deconfliction, traffic or basic, as appropriate for their requirements.
ii. IFR departure clearances are available before start and pushback.
iii. Flight plans filed direct to SAM may be subject to a route change via GIBSO.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1527
HEIGHTS IN FEET AGL (780)

EXETER

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2200** in the sector defined by the lateral limits; 505046N 0033433W - 505211N 0032531W thence clockwise by an arc of a circle radius 8NM centred on 504425N 0032229W to 505009N 0031341W thence anti-clockwise by an arc of a circle radius 5NM centred on 504826N 0030617W to 504400N 0030954W thence clockwise by an arc of a circle radius 8NM centred on 504425N 0032229W to 503640N 0031929W - 503515N 0032829W thence clockwise by an arc of a circle radius 8NM centred on 504300N 0033130W to 503606N 0033751W - 503706N 0033828W thence anti-clockwise by an arc of a circle radius 5.2NM centred on 504024N 0034447W to 504531N 0034327W thence clockwise by an arc of a circle radius 8NM centred on 504300N 0033130W to 505046N 0033433W.

b) **2600** in the sector defined by the lateral limits; 504531N 0034327W thence clockwise by an arc of a circle radius 5.2NM centred on 504024N 0034447W to 503706N 0033828W - 503606N 0033751W thence clockwise by an arc of a circle radius 8NM centred on 504300N 0033130W to 504531N 0034327W.

c) **2600** in the sector defined by the lateral limits; 505009N 0031341W thence clockwise by an arc of a circle radius 8NM centred on 504425N 0032229W to 504400N 0030954W thence clockwise by an arc of a circle radius 5NM centred on 504826N 0030617W to 505009N 0031341W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher to **NDB(L) EX**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) EX**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**

1 AIRPORT REGULATIONS

Not applicable

2 GROUND MOVEMENT

Not applicable

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Turbulance can be expected with a westerly wind.
b) Bird hazard is assessed as seasonally high. The main hazard occurs during the months of May through August when nesting Terns colonise the vicinity of the aerodrome. During this period the highest area of risk is to aircraft on final approach to Runway 06.
c) Ground falls away very steeply approximately 30 M beyond each runway end. Care should be taken to anticipate sudden wind changes which might result in a touch-down short of the thresholds.
d) The runway surface is prone to moss growth and may be slippery in patches, particularly when wet.

EGTF AD 2.19 RADIO NAVIGATION AND LANDING AIDS

INTENTIONALLY BLANK

EGTF AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) First time visitors are required to obtain a telephone briefing from the A/G Station.
b) Pilots are responsible for the safety and conduct of their passengers whilst airside at this airport.
c) Not available to aircraft unable to communicate by radio.
d) Aerodrome is not available to weight shift microlights.
e) No circuit training permitted on PHs and outside published operating hours.
f) Aerodrome closed to all traffic on Christmas day.
g) When the visibility is less than 3000 M, landing operations for Twin turbo-prop aircraft with certified weights above 5700 KG and turbo-fan aircraft of any weight that are not normally based at Fairoaks Airport will not normally be permitted. If the operation is conducted in accordance with a JAA AOC then the visibility minimum landing shall be as stated in the operators Operations Manual.
h) Due to planning restrictions, only four runway movements are permitted before 1000 (0900) on Sundays. A similar restriction of only four movements also applies after 2000 (1900). Pilots who wish to operate before 1000 (0900) or after 2000 (1900) on Sundays must obtain a runway slot from the tower. No fixed wing movements are permitted between 2200 (2100) and 0700 (0600).
i) High visibility clothing must be worn by all personnel on the apron and manoeuvring area between sunset and sunrise, except for passengers who are being escorted.
j) With the exception of approved operators the aerodrome is not available for circuit flying by non-Fairoaks based aircraft.

2 GROUND MOVEMENT

a) The taxiway to the south of the Runway 24 threshold is not maintained and is unavailable to aircraft requiring a licensed aerodrome.
b) The tarmac apron in front of the hangar opposite the fuel farm is not available for taxiing aircraft due to surface condition.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) A public footpath crosses the aerodrome close to the threshold of Runway 24.
b) Pilots are advised to exercise extreme caution when taxiing through the apron/parking areas due to reduced wing tip clearances. Pilots should satisfy themselves that they have adequate wingtip clearances whilst taxiing.
c) The aerodrome is frequently used outside the published hours of operation by both fixed and rotary wing aircraft.
d) The grass areas are subject to waterlogging.
e) The helicopter landing site, marked with an ‘H’ immediately to the south of the aerodrome boundary is a private landing site and does not form part of Fairoaks aerodrome.
f) Caution, the LDA and paved surface for Runway 06 ends 13 M beyond the runway end lights.

5 HELICOPTER OPERATIONS

a) Approaches by helicopters should normally be made to the grass to the south of the runway. Subject to traffic, including taxiing aircraft, approaches may also be made to the grass to the north of the runway. Helicopters making an approach to the grass to the north of Runway 24 must avoid overflying the buildings in the north east corner of the airfield.
b) Helicopters which require an approach to the runway must state their intentions on first contact with Fairoaks Radio.
c) When Runway 24 is in use helicopters must not operate north of the Runway 24 final approach track until they have passed the runway threshold.

6 USE OF RUNWAYS

a) The aerodrome is equipped with Pilot Controlled Lighting, details from Aerodrome Licensee.

7 TRAINING

Not applicable

EGTF AD 2.21 NOISE ABATEMENT PROCEDURES

a) For noise abatement purposes, pilots are to avoid overflying the properties in the northeast corner of the aerodrome below 1100 FT QNH.

EGTF AD 2.22 FLIGHT PROCEDURES

1 CIRCUITS

a) Circuits variable.
b) All procedures are based on Fairoaks QNH.
c) Circuit altitude is 1100 FT for aeroplanes and 800 FT for helicopters.
d) Inbound aircraft and circuit traffic should squawk 7010 when operating in the Fairoaks circuit and ATZ/LFA unless otherwise instructed.
e) Joining

   i. Aeroplanes should normally enter the ATZ level at 1400 FT AMSL, and descend to 1100 FT AMSL when north of the runway prior to turning:

      1. downwind for Runway 06 left hand circuit;
      2. crosswind for Runway 24 left hand circuit;
      3. crosswind for Runway 06 right hand circuit;
      4. downwind for Runway 24 right hand circuit.

   ii. ‘Straight-in’, ‘downwind’ and ‘base’ joins are strongly discouraged when the circuit is active.
   iii. Helicopters should normally enter the ATZ level at 800 FT AMSL and let down south of the runway. Helicopters which wish to utilise the runway should conform to fixed wing procedures.

2 LOCAL FLYING AREA

a) Within a Local Flying Area (LFA) of 2 NM radius, centred on the aerodrome (512053N 0003331W) and fillets to the east bounded by lines joining positions:

   512211N 0003107W - 512124N 0003001W - 512014N 0002925W - 512013N 0003032W thence anti-clockwise by the arc of a circle radius 2 NM centred on 512053N 0003331W (aerodrome) to 512211N 0003107W and to the west bounded by lines joining positions: 512013N 0003633W - 512013N 0003800W - 512017N 0003822W - 512208N 0003602W thence anti-clockwise by the arc of a circle radius 2 NM centred on 512053N 0003331W (aerodrome) to 512013N 0003633W.

b) Pilots of aircraft operating within LFA are responsible for providing their own separation from other aircraft operating within the LFA.
c) Aircraft may approach Fairoaks from the southern quadrant, between the western and the eastern fillets, but must remain west of the M25 Orbital Motorway.
d) VFR flights may take place within the LFA subject to the following conditions:

   i. In compliance with the Class D Airspace weather minima as defined in ENR 1.4;
   ii. Maximum altitude: 1500 FT QNH.

e) Aircraft unable to operate VFR may operate Special VFR within the LFA subject to the following conditions:

   i. Remain clear of cloud and with the surface in sight;
   ii. Maximum altitude: 1500 FT QNH;
   iii. By day only;
   iv. A minimum flight visibility of 3 KM;
   v. In compliance with the requirements of ENR 1.2.

f) Mode S Transponders:

   i. The carriage of a Mode S Transponder within the LFA is encouraged, however there is currently no requirement for aircraft operating in the Fairoaks LFA to comply with the requirements of the London CTR Mode S Transponder Mandatory Zone (TMZ).
   ii. Pilots of suitably equipped aircraft shall utilise the transponder to the maximum serviceable extent with altitude information selected when fitted.

3 AIRCRAFT IN THE LONDON CTR OUTSIDE THE FAIROAKS LFA

a) Aircraft operating VFR or Special VFR in the London CTR inbound to Fairoaks (or otherwise) must not assume permission has been issued to penetrate the Fairoaks LFA. Heathrow Radar will, whenever possible, permit an aircraft to leave the frequency temporarily to obtain such permission. If this is not possible, aircraft must leave the CTR clear of the Fairoaks LFA and route to Fairoaks from a southerly direction.
b) Pilots requiring a VFR or Special VFR clearance to transit the London CTR must remain within the confines of the Fairoaks LFA until a clearance has been obtained from Heathrow Radar.

4 Procedures for IFR flights via the ATS Route Network

a) **General**

In order to provide improved ATC handling of flights via the ATS Route Network, a system of Standard Routes has been established and these are published in the UK Standard Route Document (SRD) which can be found here:

http://www.nats.aero/ais.

Additionally, aircraft inbound via the ATS Route Network must follow the Farnborough Standard Arrival Routes (STAR) as shown at AD 2-EGLF-7-1 to 7-4.

b) **Flight Plans**

Pilots wishing to fly on the ATS Route System are to flight plan via the appropriate routes detailed in paras (c) and (d).

c) **Inbound Aircraft**

i. Routes

Inbound aircraft that are RNAV 1 compliant are to flight plan via the RNAV 1 Standard Arrival Routes (STARs) associated with Farnborough as detailed in AD 2.EGLF-7-1 to AD 2.EGLF-7-2. Other aircraft are to flight plan via the RNAV 5 STARs as detailed in AD 2.EGLF-7-3 to AD 2.EGLF-7-4.

Note: *Arrivals routing via RNAV5 STARs may be tactically routed via 5LNC points detailed within the RNAV1 STAR plates. Crews should be familiar with the following 5LNC points: -*

Point	Latitude	Longitude
INDOX	511839.55N	0010114.04W
DIXIB	511412.22N	0005053.53W
EVATA	510821.29N	0004557.52W
LUXIV	510510.63N	0004657.06W

ii. **Inbound Procedures**

1. After leaving the ATS Route System, pilots will normally be provided with a radar service outside controlled airspace by Farnborough ATC during the notified operating hours shown at EGLF AD 2.18. A contact frequency will be given by London Control before leaving the ATS Route System.
2. When Farnborough Radar is closed or unable to provide a radar service, pilots will be instructed to leave controlled airspace at an appropriate point and are then to proceed by a route which remains clear of controlled airspace.

iii. **Speed Limits**

Speed limit points are included within the various Standard Arrival Routes (STARs) referred to in c (i).

iv. **Loss of Communications Procedures (inbound aircraft)**

Aircraft should descend to leave controlled airspace at an appropriate point and proceed outside controlled airspace in accordance with the Basic Loss of Communications Procedures detailed at ENR 1.1 paragraph 3.4.

d) **Departing Aircraft**

i. **Routes**

1. ATS Route joining clearance is to be requested for the first ATS Significant Point in the routes detailed below. **These routes are not assessed for obstacle clearance and do not constitute Standard Instrument Departure procedures.**
2. Pilots who wish to join the ATS Route Network at other than CPT, GWC or HAZEL should flight plan to join the ATS Route Network when clear of the London TMA.

Note: *Pilots should be aware that the provision of ATS is extremely limited for any flight outside CAS between OCK/BIG/DET. This is due to the large number of locations from which extensive VFR operations take place in this constrained area, combined with the limitations of any ATS provision.*

Pilots should therefore take into account the lack of available ATS in any area that is known to be busy with multiple VFR operations and should anticipate the extended time that may be required to operate outside CAS before any joining clearance can be provided.

Additionally, requests made to LTC Swanwick to join CAS prior to the boundary of the London TMA may be declined due to sector workload and it should also be noted that below FL 70 a Basic Service is the only ATS available from LTC Swanwick TMA controllers.

Departure to	Via	Route	Notes
North	CPT	As per UK SRD.	Includes departures to EGGW, EGSC, EGSG, EGSS and EGSU.
Northeast			
West			
Northwest			
South	GWC	As per UK SRD.	Includes departures to EGKA, EGKB, EGKK, EGKR, EGLC and EGMC.
East	HAZEL	As per UK SRD.	Includes departures to EGLD, EGLL and EGWU.
Southeast			
Southwest			

Note: *See UK Standard Route Document (available online from the NATS/AIS website)*

http://www.nats.aero/ais.

ii. **Procedures**

1. **Pilots are to ensure that they have received and acknowledged a joining clearance before entering controlled airspace.**
2. The Fairoaks A/G Station will notify the pending departure to London Terminal Control (LTCC) and will co-ordinate the departure with Farnborough.
3. All departures into the ATS Route Network require approval from Farnborough. Details of the phraseology that will be used is available on the airport website at https://fairoaksairport.uk/phraseology/.
4. When Runway 24 is in use at both Fairoaks and Farnborough, the Fairoaks A/G Station will normally relay joining clearances to enter the Farnborough CTR/CTA, to pilots on behalf of Farnborough Radar. At all other times the Fairoaks A/G Station will issue pilots with after departure instructions and pilots **must remain outside of controlled airspace** until a clearance to enter controlled airspace has been issued by Farnborough Radar or LTCC.
5. Aircraft will contact Farnborough Radar as soon as possible after departure from Fairoaks. Unless otherwise instructed, the Farnborough Radar frequency is 134.355 MHz.
6. Farnborough Radar will individually coordinate entry into the ATS Route Network with LTCC once the departure is airborne. This may require the aircraft to leave Farnborough controlled airspace prior to subsequent join into the LTMA. If this is the case, Farnborough Radar may provide a Traffic Service or Deconfliction Service as appropriate.
7. If Farnborough Radar is closed or is unable to provide a radar service outside controlled airspace the Fairoaks Radio will transfer the aircraft directly to the appropriate LTCC sector and the pilot must request clearance to join controlled airspace.
8. Pilots are reminded of the need to comply with any Air Traffic Flow Management measures in force at the time.
9. Departures outside of the opening hours of Fairoaks Radio requiring ATS route joining clearance are requested to call the London Terminal Control Assistant on 02380-401008 prior to departure in order to activate their flight plan and receive an airways squawk. An SSR code will be issued by Farnborough Radar during their operational hours (Outside of this, the SSR code will be available from the Terminal Control Assistant). Pilots shall be cognisant of the opening hours of Farnborough Radar (see EGLF AD 2.3), and are required to telephone Farnborough on 01252-526015 during opening hours, or blind call on 134.355 MHz in the event of departure within the 15-minute period prior to Farnborough opening.

iii. **Loss of Communication Procedures (outbound aircraft)**

1. Pilots should adopt the Loss of Communications Procedures detailed at ENR 1.1, paragraph 3.4.

Flights which have not received an ATC clearance to enter controlled airspace should not enter controlled airspace unless an overriding safety reason compels entry.

e) **Warnings**

Below FL 65, aircraft arriving/departing via the ATS route network can expect to operate within Class Echo airspace between ASLAP and 3 NM West of HAZEL/within 7.5 NM of GWC. ATC will **not** provide notification to pilots of entry to or exit from Class Echo airspace when the aircraft is transitioning from a higher classification of airspace.

Within these volumes of airspace VFR traffic may be operating but not in communication with Farnborough Radar.

5 DEPARTURES

a) When departing Fairoaks from Runway 24, pilots must not delay their initial turn to ensure that they do not infringe the Farnborough CTR which is located to the southwest of Fairoaks at a range of less than 3 NM.
b) Caution, the base of controlled airspace to the south of Fairoaks is 2000 FT AMSL.

c) Pilots of VFR flights who intend to seek permission to transit Farnborough controlled airspace must make their intention clear to the Fairoaks A/G Station prior to departure in order that they are transferred to the correct frequency. **Pilots are to ensure that they have received and acknowledged a joining clearance before entering controlled airspace.**

EGLF AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Fri 0700-2200 (0600-2100); Sat, Sun and PH 0800-2000 (0700-1900).
2	Customs and immigration	By arrangement.
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	As AD hours. See also AD 2.18. Aerodrome may close earlier if there is no scheduled traffic. In these circumstances a NOTAM will be issued and the Airport Operations frequency will be closed.
8	Fuelling	Aircraft fuelling permitted Mon-Fri 0545-2215 (0445-2115); Sat, Sun and PH 0700-2015 (0600-1915).
9	Handling	As AD hours.
10	Security	H24
11	De-icing	As AD hours.
12	Remarks	This aerodrome is PPR through Farnborough Airport Ops. Aerodrome may close earlier if there is no scheduled traffic. In these circumstances a NOTAM will be issued and the Airport Operations frequency will be closed. Aerodrome CLOSED on 25 and 26 December.

EGLF AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Contact Farnborough Airport Ops.
2	Fuel and oil types	AVTUR JET A-1 and SAF (Sustainable Aviation Fuel).
3	Fuelling facilities/capacity	Bowser.
4	De-icing facilities	Yes, contact Farnborough Airport Ops.
5	Hangar space for visiting aircraft	Available on prior notice to Farnborough Airport Ops.
6	Repair facilities for visiting aircraft	Available from Farnborough Engineering (01252-372400).

7	Remarks	Ground Handling for all visiting civil aircraft will be undertaken by Farnborough Airport Ops on North Apron. Crews must seek prior permission from Farnborough Airport Ops, if aircraft refuelling with passengers on board is required. Oxygen: OXRB. Starting Units: E1, 3, 4, 6, 7 and 10.

EGLF AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotel on aerodrome and several within 2 NM of aerodrome.
2	Restaurants	Several within 2 NM of airport.
3	Transportation	Chauffeur and taxis available via Farnborough Airport Ops. Nearest railway stations: Farnborough Main 1 NM; North Camp 1 NM.
4	Medical facilities	Limited first aid treatment on aerodrome; local ambulance service.
5	Bank and Post Office	-
6	Tourist Office	-
7	Remarks	Executive Lounge in Terminal Building.

EGLF AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 RFF Category 7 accepted under remission.
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	Refer to Airport Operations (01252-379002).
4	Remarks	-

EGLF AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, chemical anti and de-ice.
2	Clearance priorities	Full length of Runway 06/24 minimum width 30 M.
3	Remarks	Latest information from ATC: 01252-526017.

EGLF AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use of the handling agent (Farnborough Airport Ops) is normally mandatory. If permission is granted to use the airport without use of the handling agent, while airside the aircraft commander is responsible for the safety of his/her passengers and other crew members. Passengers are at all times to be escorted by the aircraft commander or a crew member who is known to be competent to ensure both his/her safety and that of passengers. The commander/crew member escorting passengers is responsible for ensuring that a total ban on smoking whilst airside is strictly observed.
b) Conditions of use are available from Farnborough Airport Ops when requesting PPR.
c) The use of this airport by scheduled passenger services, inclusive tour charter flying and bulk freight flights is prohibited.
d) Operators should be aware that movements are restricted at weekends and Bank Holidays and in particular that surcharges will apply on these days in addition to landing fees (with a minimum charge applicable).
e) All aircraft will be charged an emissions levy. Contact Farnborough Airport Ops on +44 (0)1252-379002 for full details.
f) Aircraft are prohibited from departing and arriving outside the operational hours notified at EGLF AD 2.3 paragraph 1, and at any time on the 25 and 26 December.
g) Due to the operating restrictions in (f) above, inbound aircraft will be required to be at or below 4000 FT AMSL, and within 12 track miles to touchdown for the landing runway, by the relevant airport closure time minus 5 minutes. Approaches outside this criteria will not be accepted by the Aerodrome Authority.
h) All aircraft departing Farnborough must be airborne no later than the relevant aerodrome closure time. Should an aircraft intend to depart with less than 10 minutes prior to the aerodrome closing time, ATC will contact the pilot to advise of the time restriction. Aircraft requesting start up for departure less than 5 minutes prior to the aerodrome closing time will be declined by ATC. Aircraft requesting taxi for departure less than 3 minutes prior to the aerodrome closing time will be declined by ATC. Aircraft positioned on the East Apron for a Runway 24 departure may be issued start clearance provided there remains 3 minutes before the aerodrome closure and taxi clearance with 2 minutes before the aerodrome closure.
i) Flight plans naming Farnborough as the destination must not be filed until PPR is approved. Flight plans naming Farnborough as an alternate do not guarantee acceptance of diversion or granting of PPR. For short notice movements, including diversions, contact Farnborough Airport Operations on OPS channel 131.865. NOTAMs will be issued to notify when Farnborough is unavailable as an alternate.
j) Operators wishing to operate from Farnborough are required to ensure that Supplementary Flight Plan Information (Field 19 of the Flight Plan form) is submitted to Eurocontrol Integrated Flight Planning System (IFPS) for out of hours retrieval. See UK AIP ENR 1.10 Paragraphs 3.6.4 and 3.5 for details.
k) All departures from Farnborough filing FPLs to leave the IFPZ must utilise the re-addressing function available via IFPS (See IFPS Users Manual, Chapter 15).
l) West 2, West 3 and East Aprons are not available to aircraft that require to use a licensed aerodrome.
m) For environmental reasons, an instrument approach at Farnborough for the purpose of landing at an adjacent aerodrome without an instrument approach procedure is not available.
n) Only aircraft that are 8.33 kHz compliant will be accepted.
o) Engine start utilising cross bleed air is not available on the following aprons/ramps:

   i. Hangar 1 - 10 Ramp;
   ii. Tower 4 - 6 Ramp;
   iii. Terminal Ramp (except for aircraft parked on Terminal Grass).

p) Business aviation helicopters exceeding 10,000 KG MTOW are not permitted to take off or land at the aerodrome.

2 GROUND MOVEMENT

a) Arriving aircraft, including helicopters, must follow ATC instructions and report marshaller in sight. All pilots are to be familiar with the Aerodrome Chart - ICAO AD 2-EGLF-2-1.
b) Parking locations referred to as Ramps by ATC delineate location. Tower and Hangar Ramps are determined by the Hangar number the Ramp is outside/opposite and are referred to over the R/T as Tower x or Hangar x (where x is a number between 1 and 10 according to the aircraft parking/docking chart at AD 2-EGLF-2-2).
c) All aircraft parking in front of the terminal buildings will be marshalled nose in. All handling services will be carried out in this position. When ready for departure, all aircraft will be pushed back from the terminal to allow self manoeuvre for departure. Engine start-up will not be approved until push back is complete. Pilots must not call ATC for engine start until the push back crew have confirmed it is safe to do so.
d) In all parking positions, prior to starting engines, pilots must request approval from ATC. When calling for start, ramp position must be passed to ATC.
e) Pilots are to notify ATC prior to start-up if ground marshalling assistance is required for departure.
f) Aircraft taxiing from any ramp/apron must use minimum power until established on the taxiway centreline.
g) Due to the number of personnel and vehicles operating on the North Apron and West 1 Apron, pilots are to operate at minimum taxiing speed when approaching or transiting these areas.
h) Jet aircraft under power not permitted to use West 2 and West 3 Aprons.
i) Taxiway Yankee between South 1 Apron and South 2 Apron is not available to aircraft.
j) Runway stop-bars are active during operational hours. Standard stop-bar procedures apply.
k) Compass swing procedures are permitted at the designated site only, located on South 2 Apron. Aircraft requesting to reposition to the Compass Swing Base must receive a suitable clearance from ATC.

3 CAT II/III OPERATIONS

a) Farnborough is not equipped for Cat II/III operations, however Low Visibility Procedures are used to protect Cat I operations.
b) Low visibility procedures will commence when the met visibility/IRVR is 1500 M or below and/or cloud ceiling is 200 FT or below. Pilots of arriving aircraft should delay their 'runway vacated' call until they are clear of the coded taxiway centre-line lights.
c) During low visibility operations except where the aircraft operator has a lower state authorised take-off minima, the Aerodrome Authority cannot approve public transport departures in RVR conditions of less than 400 M. Operators of non public transport aircraft are advised that there is no runway centre-line lighting and that a departure in RVR conditions of less than 400 M is at the pilot's discretion.

4 WARNINGS

a) Danger Areas EGD132, EGD133A and EGD133B are within 3 NM of the Eastern aerodrome boundary. On approach to Runway 24, the 3.5° GP is mandatory both for noise abatement purposes and to ensure safe clearance above Danger Areas EGD133A and EGD133B.
b) Traffic carrying out instrument approaches to Runway 27 at Odiham will pass approximately 2.5 NM South of Farnborough aerodrome at 2000 FT QNH or lower.
c) Turns onto base leg for Runway 06 will be given in close proximity to the edge of Controlled Airspace and intense Gliding Activity (operating outside of controlled airspace). Crews should respond to ATC turn instructions without delay, maintaining an expeditious rate of turn.
d) Low level turbulence and windshear may be encountered when the wind is from 190° to 240° at 15 KT or more within 0.5 NM from touchdown on Runway 24 (from crossing the main road to crossing Runway 24 threshold markings).
e) Aircraft under tow at night may not be displaying Nav/Anti-collision lights.
f) Where the taxiway width is less than the paved surface width, the portions outside the taxiway markings are not maintained and should not be used by aircraft.
g) Bird scaring takes place regularly including the use of pyrotechnics. Large birds including geese and heron are often seen on the aerodrome.
h) Oakhanger High Intensity Radio Transmission Area (HIRTA) is situated 8 NM south west of Farnborough.
i) Fairoaks Airport is situated 9 NM north east of Farnborough; Fairoaks departures may trigger TCAS warnings for Runway 24 instrument approach traffic.
j) Although Taxiway C has the appearance of a rapid exit turn-off, it is not configured as such, and pilots are reminded of the need for an acute left turn at the end of Taxiway C to access Taxiway B and North Apron.
k) Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class E airspace between ASLAP and 3 NM west of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class E airspace when the aircraft is transitioning from a higher classification of airspace.

5 HELICOPTER OPERATIONS

a) Rotors running refuelling is not permitted.

6 USE OF RUNWAYS

a) Runway 06/24 restrictions:

   i. Practice engine failures after take-off are not permitted on Runway 06.

b) Runway Occupancy

   i. **Departures**. Whenever possible, cockpit checks should be completed prior to entering the runway and any checks requiring completion on the runway should be kept to a minimum. Pilots unable to comply with this requirement must inform ATC prior to lining up for departure.

7 TRAINING

a) The use of the aerodrome for training is generally restricted to home based aircraft; however, instrument training approaches by non-jet/ turboprop fixed wing aircraft with a MTWA not exceeding 5700 KG may be accepted Mon-Fri 1000-1600 (0900-1500), subject to the approval of Farnborough ATC. All other requests for instrument or visual flying training are subject to prior approval by Farnborough Airport Ops.

EGLF AD 2.21 NOISE ABATEMENT PROCEDURES

1 GENERAL

a) Farnborough is located within a noise sensitive area and is subject to Local Authority Planning Requirements which impose a number of environmental constraints. Pilots are to ensure that their aircraft are operated in a manner likely to cause the least disturbance in the areas surrounding the aerodrome. A noise track monitoring system is in operation.
b) Only those aircraft meeting ICAO Chapter 4 criteria will be accepted. Contact Airport Director on +44 (0)1252-379007.
c) Pilots are to adhere to the published noise abatement procedures at all times unless deviation is required to the extent necessary for avoiding immediate danger or to comply with ATC instructions.

2 GROUND RUNNING OF ENGINES

a) The operation of APUs is not permitted between Mon-Fri 2230-0630 (2130-0530), excluding PH, and Sat, Sun and PH 2030-0730 (1930-0630). At all other times APUs can be operated for a maximum one hour after arrival on apron and one hour prior to departure
b) Ground running of engines at idle power may take place on aprons during airport operational hours, subject to ATC approval. Ground running of engines above idle power may only take place Mon-Fri 0900-1800 (0800-1700) excluding PH. At weekends and PH, ground running of engines above idle power may only take place between the hours of 1000-1800 (0900-1700) and is restricted to essential maintenance work only. All engine ground runs above idle will be carried out on Taxiway Zulu. ATC must be notified prior to commencement and on cessation of all engine ground runs. In addition, request for engine ground runs at weekends and PH must be made to Farnborough Airport Ops via email.

3 DEPARTURES

a) General.

   i. All departures are to use best rate of climb until at or above 3000 FT QNH. If the initial departure clearance involves levelling off below 3000 FT QNH, power settings used must not result in excessive noise levels at points on the ground underneath the flightpath, especially when climb is recommenced.
   ii. Standard Instrument Departures as detailed in AD 2.EGLF-6-1 to AD 2.EGLF-6-2 comply with required Noise Preferential Routings. Noise Preferential Routings cease at 3.4 DME on Runway 24 and at 2.4 DME on Runway 06.
   iii. Noise Preferential Routings are for all departing jet/turboprop aircraft, and all other aircraft of more than 2730 KG MTWA, unless otherwise instructed by ATC or unless deviations are required in the interests of safety.
   iv. Noise Preferential Routings may be cancelled by ATC using the phrase ‘cancel noise abatement’.

b) Non SID Departure Noise Preferential Routings (NPRs) - Runway 06.

   i. (All directions) Climb straight ahead to 2.4 DME, then turn on track or as instructed by ATC.

c) Non SID Departure Noise Preferential Routings (NPRs) - Runway 24.

   i. North - Climb straight ahead to 3.4 DME, then turn on track or as instructed by ATC.
   ii. South - Climb straight ahead; after passing 1200 FT QNH fly ATC issued Radar heading. In the event an aircraft is departing without an ATC issued Radar heading (for example during Radar being unavailable) this is amended to climb straight ahead; at 2.4 DME or 1200 FT AMSL (whichever is sooner) turn left onto track 219° M or as directed by ATC. This is referred to by ATC as ‘Noise Preferential Route South’. Crews should note that a **prompt** turn at 1200 FT QNH is essential in order to remain outside the Odiham ATZ and areas of gliding activity.

4 ARRIVALS

a) ILS approaches are mandatory except when a non-precision or visual approach is provided or authorised by ATC. The use of the ILS glidepath, if radiating, is recommended for all approaches.
b) All aircraft approaching to land or go-around from a visual or non-precision approach shall establish on final approach not below 1250 FT QNH (1000 FT AAL) and at not less than 3 NM from touchdown; thereafter aircraft shall follow a descent path which will not result in the aircraft being at any time lower than a 3.5° glidepath as indicated by the PAPIs or ILS unless authorised by Farnborough ATC.
c) Aircraft commanders are requested to minimise noise disturbance in the areas overflown during final approach by conforming to low power, low drag procedures at all times. Additionally the requirements in AD 2.22 Flight Procedures, paragraph 1(a) must be complied with.
d) To minimise disturbance in areas adjacent to the aerodrome, commanders of aircraft are requested to avoid the use of reverse thrust at all times, consistent with the safe operation of the aircraft. Where the use of reverse thrust is essential, the use of idle reverse thrust should be used in preference.

EGLF AD 2.22 FLIGHT PROCEDURES

The following procedures may be modified for use during Farnborough International Ltd Airshow periods and will be notified by AIP Supplement and/or NOTAM.

1 PROCEDURES FOR IFR FLIGHTS VIA THE ATS ROUTE NETWORK TO AND FROM FARNBOROUGH

a) Procedures For Inbound Aircraft

i. Aircraft inbound to Farnborough via the ATS Route Network that are compliant with and equipped to the RNAV 1 navigation standard must follow the appropriate Standard Arrival Routes (STAR) terminating at VEXUB as shown at AD 2-EGLF-7-1 to 7-2 (CPT 1V, KATHY 1V, ELDAX 1V & SOKDU 1V). Planning must be in accordance with the UK Standard Route Document (SRD) and UK Route Availability Document (RAD).
ii. Aircraft inbound to Farnborough via the ATS Route Network that are compliant with and equipped to the RNAV 5 navigation standard must follow the appropriate Standard Arrival Routes (STAR) terminating at PEPIS as shown at AD 2-EGLF-7-3 to 7-4 (CPT 1P, ABSAV 1P & NOTGI 1P).
iii. Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class E airspace between ASLAP and 3 NM West of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class E airspace when the aircraft is transitioning from a higher classification of airspace.
iv. Instrument Approach Procedures are detailed at AD 2-EGLF-8-1 to 8-9.
v. Nominal glide path 3.5° mandatory for ALL approaches including non-precision and visual.
vi. **Loss of Communication Procedures**

1. Aircraft inbound to Farnborough from the ATS route network issued with a STAR terminating at PEPIS (CPT 1P, ABSAV 1P, NOTGI 1P), should route to VEXUB via Initial Approach Procedures in AD 2-EGLF-7-9 RWY 06 and in AD 2-EGLF-7-10 RWY 24. Once at VEXUB, aircraft shall take up the hold for 10 minutes prior to carrying out the appropriate Instrument Approach Procedure as detailed in AD 2-EGLF 8-1, 8-2, 8-4, 8-5, 8-6 and 8-7.
2. Aircraft inbound to Farnborough not via the ATS Route Network should route via VEXUB, to be level 3000 FT ALT at VEXUB. Once at VEXUB, aircraft shall take up the hold for 10 minutes prior to carrying out the appropriate Instrument Approach Procedure as detailed in AD 2-EGLF 8-1, 8-2, 8-4, 8-5, 8-6 and 8-7.
3. Aircraft with a loss of communications in the missed approach phase should proceed to the VEXUB hold at 3000 FT. Once at VEXUB, aircraft shall take up the hold for 10 minutes prior to carrying out the appropriate Instrument Approach Procedure as detailed in AD 2-EGLF 8-1, 8-2, 8-4, 8-5, 8-6 and 8-7.
4. IFR flights are expected to carry out the full Instrument Approach Procedure and not proceed visually.

vii. **Loss of Radar at Farnborough**

Due to the complex nature of the airspace in the vicinity of Farnborough, the use of Instrument Approach Procedures is dependent upon the availability of a Radar Service or ILS DME. In the event of Radar failure at Farnborough flights should proceed as directed by ATC.

b) Procedures For Outbound Aircraft

i. Standard Instrument Departure Procedures are detailed at AD 2-EGLF-6-1 to AD 2-EGLF-6-2.
ii. Departure Speed Restriction:
In order to optimise the departure flow and assist in the separation between successive departing aircraft a speed limit of 250 KT IAS below FL 100 is applicable until removed by ATC. ATC may remove the speed restriction by using the phrase 'No ATC Speed Restriction'. Pilots are reminded that this phrase does not relieve the pilot of the responsibility to adhere to the ground track of the Noise Preferential Route, which may require a speed/power limitation.
iii. If for any reason pilots are unable to comply with the 250 KT IAS speed restriction the pilot should immediately advise ATC and state the minimum speed acceptable. If a pilot anticipates before departure that they will be unable to comply with the speed restriction, they should inform ATC when requesting start-up clearance, stating the minimum speed acceptable. In this case the pilot will be informed before take-off of any higher speed limitation.
iv. Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class E airspace between ASLAP and 3 NM west of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class E airspace when the aircraft is transitioning from a higher classification of airspace.

2 PROCEDURES FOR IFR FLIGHTS VIA THE ATS ROUTE NETWORK TO AND FROM DUNSFOLD, LASHAM AND ODIHAM

a) In order to provide improved ATC handling of flights inbound to or outbound from these aerodromes via the ATS Route network a system of standard routes has been established and these are published in the UK Standard Route Document (SRD) which can be found here:

http://www.nats.aero/ais.

b) Warnings

i. Due to intense gliding activity pilots should avoid flying within 2.5 NM of Lasham aerodrome below 5000 FT ALT. When available Farnborough Radar will provide navigational assistance as necessary.
ii. Pilots are reminded of the proximity of Oakhanger High Intensity Radio Transmission Area (HIRTA) (see UK AIP ENR 5.3) and Danger Areas in the vicinity.
iii. Below FL 65 aircraft arriving/departing via the ATS route network can expect to operate within Class E airspace between ASLAP and 3 NM west of HAZEL/within 7.5 NM of GWC. ATC will not provide notification to pilots of entry to or exit from Class E airspace when the aircraft is transitioning from a higher classification of airspace.

c) Flight Plans

i. Pilots wishing to fly via the ATS Route Network and who are inbound to or departing from Dunsfold, Lasham or Odiham are to flight plan via the appropriate routes detailed in paras (d)(i) and (e)(i).

d) Inbound Aircraft

i. IFR Arrivals

Standard Arrival Routes (STARs) for aircraft inbound from the UK ATS Route Network are detailed at AD 2-EGLF-7-1 to 7-4.

Note: *See also UK Standard Route Document (available online from the NATS/AIS website: www.nats.aero/ais).*

For loss of Communication purposes the Clearance Limit is either PEPIS or VEXUB dependent on the STAR issued.

ii. Inbound Procedures

1. After leaving **controlled airspace** pilots will be provided with a service outside controlled airspace in accordance with UK FIS by Farnborough Radar during the notified operating hours shown at AD 2.18. A contact frequency will be given by the appropriate ATSU.
2. When Farnborough Radar is closed or unable to provide a service, pilots will be instructed to leave controlled airspace at an appropriate point and are then to proceed to their destination aerodrome by a route which remains clear of controlled airspace.

iii. **Loss of Communication Procedures (inbound aircraft)**

1. Aircraft should descend to leave controlled airspace and proceed to the destination aerodrome in accordance with the Basic Loss of Communication Procedures detailed at ENR 1.1 paragraph 3.4.

e) Departing Aircraft

i. Routes

1. A joining clearance is to be requested for the first ATS Significant Point in the routes detailed in the UK SRD. **These routes are not assessed for obstacle clearance and do not constitute Standard Instrument Departure procedures.**
2. Pilots who wish to join the ATS Route Network at points other than CPT, GWC or HAZEL should flight plan to join the ATS Route Network when clear of the London TMA.

Note: *Pilots should be aware that the provision of ATS may be limited for any flight outside CAS. This is due to the large number of locations from which extensive VFR/IFR operations take place in this constrained area.*

Pilots should therefore take into account a potential lack of available ATS outside CAS and anticipate the extended time that may be required to operate outside CAS before any joining clearance can be provided.

Additionally, requests made to LTC Swanwick to join CAS prior to the boundary of the London TMA may be declined due to sector workload and it should also be noted that below FL 70 a Basic Service is the only ATS available from LTC Swanwick TMA controllers.

Departure to	Via	Route	Notes
North	CPT	As per UK SRD	Includes departures to EGGW, EGSC, EGSG, EGSS and EGSU
Northeast			
West			
Northwest			
South	GWC	As per UK SRD	Includes departures to EGKA, EGKB, EGKK, EGKR, EGLC and EGMC
East	HAZEL	As per UK SRD	Includes departures to EGLD, EGLL and EGWU
Southeast			
Southwest			

ii. Procedures

1. **Pilots are to ensure that they have received and acknowledged a joining clearance before entering controlled airspace.**

2. The ATSU at the departure aerodrome will notify the pending departure to London Terminal Control (Swanwick) (LTC Swanwick)). Clearance to enter controlled airspace may not be passed to the aircraft prior to departure.
3. The ATSU at the departure aerodrome will co-ordinate the departure with Farnborough ATC.
4. Farnborough ATC will provide radar services as appropriate and co-ordinate entry into the London TMA . The appropriate 'Farnborough Radar' frequency is 134.355 MHz.
5. If Farnborough Radar is closed or is unable to provide a radar service outside controlled airspace the ATSU at the departure aerodrome will transfer the aircraft directly to the appropriate London Terminal Control Sector and the pilot must request clearance to join controlled airspace. The appropriate 'London Control' frequencies are: 134.125 MHz for routes via CPT and SAM, and133.180 MHz for routes via GWC.
6. Pilots are reminded of the need to comply with any Air Traffic Flow Management measures in force at the time.

iii. Loss of Communication Procedures (outbound aircraft)

1. Pilots should adopt the Loss of Communication Procedures detailed at ENR 1.1, paragraph 3.4.

Flights which have not received an ATC clearance to enter controlled airspace should not enter controlled airspace unless an overriding safety reason compels entry.

3 LOCAL TRAFFIC PROCEDURES

a) Visual Circuit Procedures

i. Compliance with the Noise Abatement Requirements at AD 2.21 para (d) is mandatory for all aircraft.
ii. All circuits on Runway 06/24 will be to the south of the aerodrome (ie Runway 06, right hand circuits; Runway 24, left hand circuits).
iii. Aircraft over 2730 KG MTWA: minimum altitude 1700 FT AMSL (1500 FT AGL) until turning onto base leg.
iv. Aircraft less than 2730 KG MTWA: minimum altitude 1200 FT AMSL (1000 FT AGL).
v. Pilots must avoid overflying the congested area 2 NM west of the aerodrome below 1700 FT ALT unless specifically authorised by ATC.

b) Departing Traffic

Noise abatement procedures notified in AD 2.21 apply to all departures both IFR and VFR.

i. VFR Departures

VFR departures are permitted however, ATC may issue a required routing or assigned initial heading to avoid noise sensitive areas and other aerodromes. The restriction notified in 'Visual Circuit Procedures' para (v) above must be complied with.

c) Arriving Traffic

i. IFR Arrivals
STARs for aircraft inbound from the UK ATS Route network are detailed at AD 2-EGLF-7-1, 7-2, 7-3 etc.
ii. See section 1 a) for information on Procedures for Inbound Aircraft.
iii. VFR Arrivals

VFR arrivals will be given an appropriate clearance to join controlled airspace pertinent to the prevailing traffic conditions and runway in use.

4 HELICOPTER ARRIVAL AND DEPARTURE PROCEDURES

Helicopters are to be operated in accordance with the British Helicopter Advisory Board (BHAB) code of conduct at all times when operating to or from Farnborough Airport.

a) **Arrival Procedures**

On first contact pilots shall advise ATC as to whether they require an IFR or a VFR approach. Due to the noise sensitivity of the areas surrounding Farnborough, the preferred approach for helicopters during daylight hours is VFR; however instrument approaches are available on request.

i. **IFR**

Standard instrument approach to Runway 06 or 24.

ii. **VFR**

1. Visual approaches to Runway 06 or 24 are only permitted when flown in accordance with UK AIP EGLF AD 2.21 - NOISE ABATEMENT PROCEDURES, Section 4 Arrivals. Delays may occur when ILS approaches are being carried out.
2. To minimise delays and noise disturbance helicopter routing to or from Farnborough, VFR, should follow one of four established routes:

aa. **WEST ROUTE**: From/To the West:
Join and follow the Basingstoke - Woking railway line to 'North Gate', then route towards the Northern aerodrome boundary via Southwood Country Park avoiding built up areas (See Note 1).

bb. **NORTH ROUTE:** From/To the North:
Join and follow the M3 until 'North Gate', then route towards the Northern aerodrome boundary via Southwood Country Park avoiding the built up areas (See Note 1).

cc. **EAST ROUTE:** From/To the East:
Route from Worplesdon Railway Station to Longerend Farm on the A324 and then to Surprise Hill. From Surprise Hill route west to join the Basingstoke Canal where it passes under the B3411 and railway bridges (Two Bridges). Follow the canal to the southern end of Queens Parade, then towards the Queens Roundabout for Runway 24 or towards the southern aerodrome boundary via the Army Golf Course for Runway 06 and Heli Yankee (See Notes 2 and 3).

dd. **SOUTH ROUTE:** From/To the South and Southwest:
Route to the A31/A331 junction (The Junction) avoiding the built up areas around Farnham. Follow the A331 to join the Basingstoke canal where it crosses over the dual carriageway then to the southern edge of Queens parade and then towards the Queens Roundabout for Runway 24 or towards the southern aerodrome boundary via the Army Golf Course for Runway 06 or Heli Yankee (See Notes 2 and 3).

Note 1: *'North Gate' is the unpopulated area between Fleet Pond VRP and M3 Junction 4A. Helicopters are not permitted to overfly the terminal building and must maintain at least 1700 FT QNH if they require to fly over any part of the QinetiQ site, Southwood or Fleet.*

Note 2: *The section of the East Route between Longerend Farm and Surprise Hill comes close to the southern edge of EGD132. Normally it is active to 500 FT AGL and it is the pilot's responsibility to remain outside the Danger Area. If EGD132 is notified as active above this level then this route will be closed by NOTAM. Pilots will be instructed to either follow the Woking to Basingstoke railway line to join via North gate, or to use the South Route, depending on traffic.*

Note 3: *Helicopters must avoid overflying all built up areas below 1700 FT AMSL unless instructed by ATC. Pilots may be instructed to route to Heli Yankee to hold on the ground if there is fixed-wing traffic arriving or departing.*

3. Two helicopter aiming points are established at Farnborough Aerodrome:

   a) Heli Foxtrot, that part of 'F' taxiway between F3 and the entrance to West 2 apron;
   b) Heli Yankee, the centre of South 2 apron.

   Pilots should avoid overflying aircraft parked on South 1 apron. Helicopter Aiming Points are located on areas that are accessed by vehicles under a 'free ranging' procedure. Pilots to be aware of possible vehicle activity. Landing clearance from ATC will be in the form 'Land at your discretion'.

b) **Departure Procedures**

Departures must take place from Runway 06/24, Heli Foxtrot or Heli Yankee

i. **IFR**

1. ATC will allocate a transponder code, along with an assigned heading and altitude, which will ensure deconfliction from other traffic and compliance with noise abatement procedures.

ii. **VFR**

1. Outbound routings must comply with noise abatement procedures, and are the reverse of the inbound routes

c) **Navigation Points**

The visual reference points used on the routes:

i. Bagshot
ii. Hook Railway Station
iii. Fleet Pond
iv. Worplesdon Railway Station

The waypoints used on the routes:

M3 Junction 4A	511812N 0004801W
Southwood Country Park	511713N 0004720W
Longerend Farm	511541N 0004049W
Surprise Hill	511523N 0004252W
Two Bridges	511523N 0004319W
The Junction	511343N 0004430W
Queens Parade	511547N 0004542W
Queens Roundabout	511624N 0004526W

The helicopter aiming points on the airfield:

Heli Foxtrot	511631N 0004703W
Heli Yankee	511622N 0004631W

5 VISUAL REFERENCE POINTS (VRP)

a) Pilots are reminded of the close proximity of busy minor aerodromes, ATZs, intense gliding activity and Danger Areas in the airspace beneath the London TMA. Pilots are strongly advised to request a Lower Airspace Radar Service from Farnborough ATC when operating in the vicinity of Farnborough aerodrome. Pilots of Police and Ambulance helicopters operating within 20 NM of Farnborough should contact Farnborough Approach on 134.355 MHz during the notified hours of that frequency.
b) Eastbound helicopters intending to join Helicopter Route H3 in the London Control Zone should use the following line features: railway line then the M3 Motorway to Bagshot VRP.
c) Pilots are advised that the VRP Bagshot is located approximately 1 NM south-east of Bagshot Mast.
d) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

6 VFR AND/OR SVFR AIRSPACE SHARING ARRANGEMENTS

a) Intense VFR glider/motorglider activity takes place during daylight hours in the vicinity of RAF Odiham up to 4000 FT AMSL, within the area bounded by:
510854.41N 0005646.07W - 511143.02N 0005850.73W -
thence clockwise by the arc of a circle radius 4.7168 NM centred on
511255.8135N 0005135.9280W -
511705.24N 0005507.85W - 511434.5868N 0005329.8848W -
thence clockwise by the arc of a circle radius 2 NM centred on
511403.09N 0005634.11W -
511313.8667N 0005340.0613W - 510854.41N 0005646.07W.
See diagram at AD 2-EGLF-4-2. Departing aircraft to be aware this area is 1 NM NW of the nominal track of the GWC 2F and HAZEL 2F SIDs.

b) Operations at Blackbushe are carried out within a portion of Farnborough CTR1 by means of a Local Flying Area. This area is defined as:
511738.23N 0005214.70W
thence clockwise by the arc of a circle radius 2 NM centred on
511926.00N 0005051.00W -
511751.5673N 0005248.7658W - 511934.5146N 0004740.1885W -
thence clockwise by the arc of a circle radius 2 NM centred on
511926.00N 0005051.00W -
511805.75N 0004828.90W - 511801.30N 0004919.04W -
511757.72N 0004953.84W - 511752.62N 0005037.73W -
511746.42N 0005120.47W - 511738.23N 0005214.70W.
(Also as that part of the Blackbushe ATZ that is coincident with Farnborough CTR1), from the surface to 2000 FT AMSL and is shown on diagram at AD 2-EGLF-4-2. Operations may be VFR or SVFR whilst in communication with the Blackbushe ATSU promulgated frequency, and those aircraft operating SVFR will not be required to be separated from one another. SVFR operations will be regarded as separated from other SVFR operations within the Farnborough CTR1 and CTR2 remaining south of the M3 motorway or East of the A331 Dual Carriageway and IFR operations established on the ILS for Runway 06/24 and departing on a GWC 2L/F or HAZEL 2L/F SIDs.

7 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the Farnborough LARS West area of responsibility, but intending to remain outside Class A to D airspace within the area bounded by the following coordinates and maintaining a listening watch only on Farnborough LARS West frequency, 125.250 MHz, are encouraged to select SSR code 4572.

514352N 0010616W - thence anti-clockwise by the arc of a circle radius 30 NM centred on 511631N 0004639W to
511218N 0013355W - 511031N 0012021W -
510648N 0010232W - 505836N 0005856W -
505302N 0005800W - 504932N 0010718W -
thence anti-clockwise by the arc of a circle radius 30 NM centred on 511631N 0004639W to
504754N 0003238W - 505832N 0003428W -
510314N 0003730W - 511422N 0003506W -
512335N 0005516W - 513444N 0005508W -
514015N 0005348W - 514352N 0010616W.

b) Selection of 4572 does not imply the receipt of an ATC service. Pilots of aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Class A to D airspace at all times.
c) Pilots of aircraft displaying 4572 Frequency Monitoring Code must operate VFR within Class E airspace applicable to Farnborough CTA 8 and 9.
d) Whilst squawking 4572, pilots should be aware that Farnborough Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
e) When a pilot ceases to maintain a listening watch, code 4572 shall be deselected.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 794
HEIGHTS IN FEET AGL (466)

FARNBOROUGH

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **1700** in the sector defined by the lateral limits; 512020N 0003837W - 512013N 0003800W - 512014N 0002659W thence clockwise by an arc of a circle radius 8NM centred on 511853N 0003933W to 511851N 0002648W - 511200N 0003304W thence clockwise by an arc of a circle radius 8NM centred on 511853N 0003933W - 511149N 0003336W - 511136N 0003417W - 511930N 0003918W - 512020N 0003837W.

b) **1800** in the sector defined by the lateral limits; 511901N 0010347W thence clockwise by an arc of a circle radius 8NM centred on 511412N 0005336W to 512115N 0005937W - 512557N 0004531W thence clockwise by an arc of a circle radius 8NM centred on 511853N 0003933W to 512014N 0002659W - 512013N 0003800W - 512020N 0003837W - 511930N 0003918W - 511136N 0003417W - 510948N 0003941W - 511053N 0004642W - 510754N 0004909W - 511517N 0005357W - 511901N 0010347W.

c) **2000** in the sector defined by the lateral limits; 511053N 0004642W - 510948N 0003941W - 510709N 0004738W thence clockwise by an arc of a circle radius 8NM centred on 511412N 0005336W to 510629N 0005018W - 511053N 0004642W.

d) **1900** in the sector defined by the lateral limits; 511901N 0010347W - 511517N 0005357W - 510754N 0004909W - 510629N 0005018W thence clockwise by an arc of a circle radius 8NM centred on 511412N 0005336W to 511901N 0010347W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES Caution: Oakhanger HIRTA; Avoid active Danger Areas at all times; Intense gliding activity at Lasham.

Initial Approach

Continue visually or by means of ILS final approach procedure. If not possible proceed to **VEXUB** at **3000** and carry out the appropriate ILS initial approach as detailed at AD-2-EGLF-7-9 or AD-2-EGLF-7-10 followed by the relevant Instrument Approach Procedure at AD-2-EGLF-8.

Intermediate and Final Approach

Continue visually or by means of the appropriate Instrument Approach Procedure. If not possible see Loss of Communication Procedures in EGLF AD 2.22 Flight Procedures.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**

CHANGE (1/26): MAG INFO REVISED. RESTRICTED AREA EGR161 ADDED.

RNAV1 (DME/DME or GNSS) STANDARD DEPARTURE CHART - INSTRUMENT (SID) - ICAO

DISTANCES IN NAUTICAL MILES
TRACKS ARE MAGNETIC
ALTITUDES AND ELEVATIONS IN FEET

FARNBOROUGH
RWY 06/24
GWC 2L 2F

GWC 2L RWY 06	Climb straight ahead to LFE01, right to LFE02, right to LFS01, left to ASLAP, right to ESULU, left to HAZEL - LFS04, left to LFS05, left to GWC.	N859
GWC 2F RWY 24	Climb straight ahead to LFW01, left to LFW02 on course 226°, left to ASLAP, right to ESULU, left to HAZEL - LFS04, left to LFS05, left to GWC.	N859

NOTE 1. RWY 24 obstacle requirement: minimum climb gradient 6.3% to 690 AAL.
NOTE 2. Close-in obstacles exist for RWY 06/24 departures. See Aerodrome Obstacle Chart and EGLF AD 2.10 Aerodrome Obstacles.
NOTE 3. Adhere to maximum speed limits where specified by waypoint constraints.
NOTE 4. Maximum 250KIAS below **FL100** unless authorised by ATC.
NOTE 5. Aircraft unable to achieve the published altitude/flight level restrictions must inform ATC prior to departure.

ADDITIONAL RNAV DATA
1. DME/DME only procedure: No critical navaids.
2. RNAV1 SIDs are available only for approved aircraft that are either GNSS equipped or that have DME/DME and INS/IRU with automatic runway updating capability.

GENERAL INFORMATION
1. Due to airspace complexity, when instructed by ATC prompt execution of frequency changes is imperative.
2. Due to proximity of controlled airspace boundaries, gliding and adjacent aerodrome operations strict adherence to published track is imperative.
3. Compulsory ATC Reporting Point at ASLAP.
4. Danger Area EGD132/EGD133B - Due to interaction with the SID, when EGD132 is active or EGD133B is active above **1200** ATC will provide heading on departure to avoid.
5. Depending on aircraft performance early capture of SID **3000** altitude may occur.

CHANGE (1/26): MAG INFO REVISED. MAG HEADINGS.

AERO INFO DATE 14 NOV 25

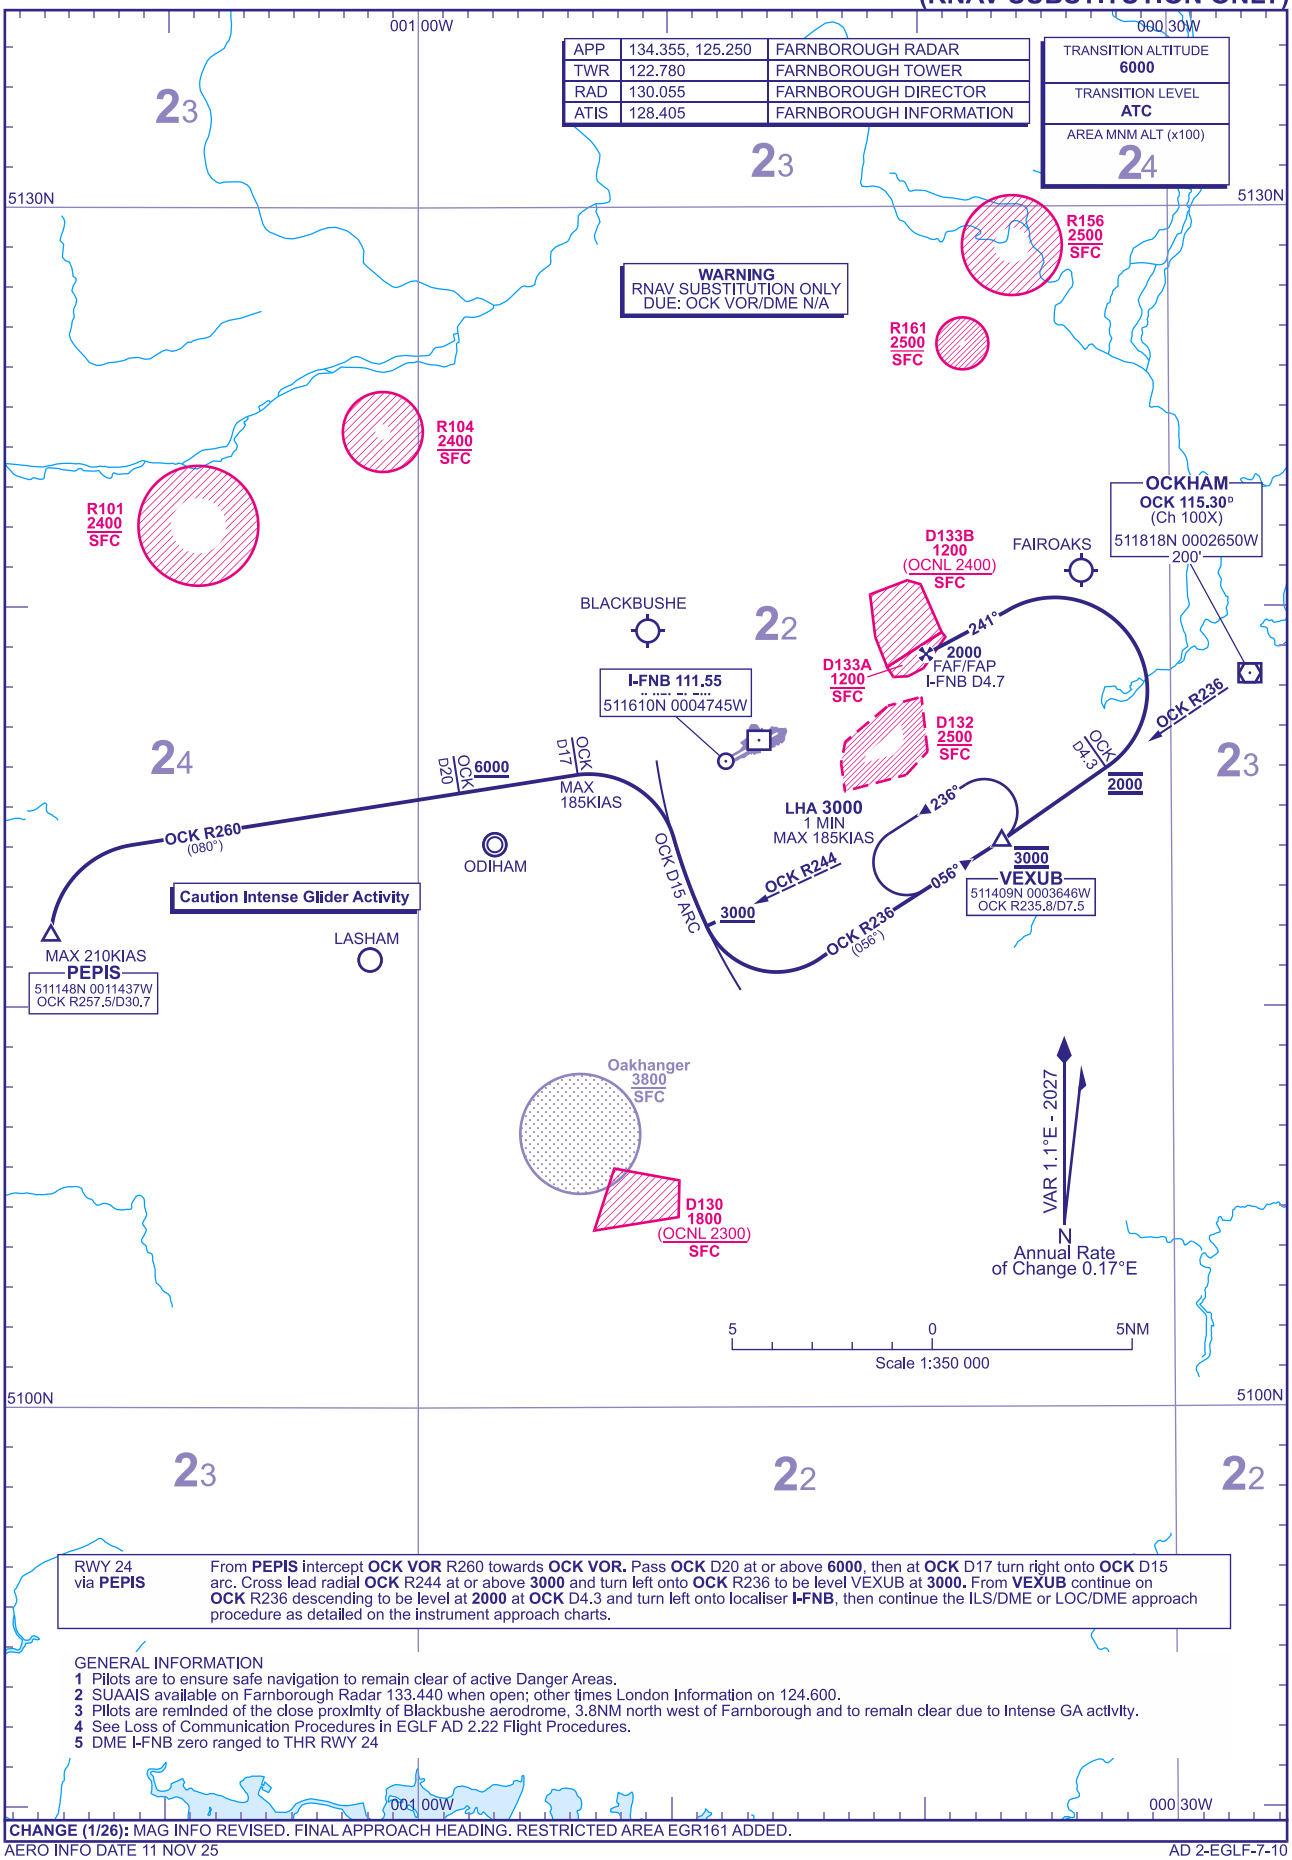
INITIAL APPROACH PROCEDURE
ILS/DME LOC/DME RWY 06

DISTANCES IN NAUTICAL MILES
TRACKS ARE MAGNETIC
ALTITUDES AND ELEVATIONS IN FEET

FARNBOROUGH
via PEPIS
(RNAV SUBSTITUTION ONLY)

RWY 06 via **PEPIS**	From **PEPIS** intercept **OCK VOR** R260 towards **OCK VOR.** Pass **OCK** D20 at or above **6000**, then at **OCK** D17 turn right onto **OCK** D15 arc. Cross lead radial **OCK** R244 at or above **3000** and turn left onto **OCK** R236 to be level VEXUB at **3000.** From **VEXUB** turn left to intercept **OCK** R266. Pass **OCK** D22 at or above **2500** and turn left onto localiser **I-FRG**, then continue the ILS/DME or LOC/DME approach procedure as detailed on the instrument approach charts.

GENERAL INFORMATION
1 Pilots are to ensure safe navigation to remain clear of active Danger Areas.
2 SUAAIS available on Farnborough Radar 133.440 when open; other times London Information on 124.600.
3 Pilots are reminded of the close proximity of Blackbushe aerodrome, 3.8NM north west of Farnborough and to remain clear due to Intense GA activity.
4 See Loss of Communication Procedures in EGLF AD 2.22 Flight Procedures.
5 DME I-FRG zero ranged to THR RWY 06.



CHANGE (1/26): MAG INFO REVISED. FINAL APPROACH HEADING. RESTRICTED AREA EGR161 ADDED.

EGCL AD 2.20 LOCAL AERODROME REGULATIONS

1 AERODROME REGULATIONS

a) Aerodrome not available for use by public transport passenger flights required to use a licensed aerodrome.
b) Runway 36 is not available at night for aircraft requiring the use of licensed runway for night flying.

2 GROUND MOVEMENT

Not applicable

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) **Caution:** The aerodrome is within the lateral limits of the East Anglian Military Temporary Reserved Airspace (EAMTRA).
b) All aircraft movements are confined to the marked grass strips and runway.
c) A drainage ditch runs parallel to and immediately adjacent the western side of the western taxiway (alongside Runway 18/36). Pilots should exercise caution when using this taxiway.
d) Model aircraft flying tales place in the southwest corner of the ATZ up to heights of 400 FT.

5 HELICOPTER OPERATIONS

a) Departing helicopters should air taxi to Hold ‘A’ before departing via the runway-in-use.

6 USE OF RUNWAYS

a) Pilots are reminded of the displaced threshold on Runway 18 and the need to keep a safe height above the road in the latter stages of approach.
b) All aircraft landing on Runway 18 must vacate right and use the 18/36 western taxiway to backtrack for parking or fuel. All aircraft landing on Runway 08/26 must backtrack on the 18/36 western taxiway to parking and fuel.
c) All aircraft are to backtrack down the western side of Runway 18/36 when required.

7 TRAINING

Not applicable

EGCL AD 2.21 NOISE ABATEMENT PROCEDURES

a) All traffic is to avoid overflying the village of Holbeach St Johns (1 NM east of the aerodrome) below 1500 FT QFE.

EGCL AD 2.22 FLIGHT PROCEDURES

a) Circuits directions: Runways 26 and 36 - LH; Runway 08 and 18 - RH. Circuit height: All Runways - 1000 FT QFE.

EGPF AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Nose-in parking is in operation on all aprons except the General Aviation area and cargo stands which are marshalled. All nose-in stands have stand number, yellow centre-line and guidance in the form of either Visual Docking Guidance System or AGNIS and Ground Stop Arrow. Cross reference to the taxiway, stands and numerals against the stand designator on the face of the pier is recommended to avoid any confusion. The following stands are fitted with Visual Guidance Docking System (Safedoc): 3-5, 9-11, 14-29, 30, 30L, 30R, 32-37, 37L, 37R, 38-40. The following stands are fitted with AGNIS and Ground Stop Arrow: 1, 1A, 2, 12, 64, 65, 81, 82. Marshalling is provided at the following stands, which are not fitted with Stand Entry Guidance: 6, 6A, 7, 8, 31, 61-63. The use of oversteering for any A380 operations must be used with extreme caution. Marshaller guidance is available on request via ATC. Stand 30 is the preferred A380 stand with twin upper bridges and lower bridge. Stand 37 is a contingency parking stand which requires the aircraft to be towed to stand from the N cul- de-sac under a special procedure.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 05/23: Runway threshold markings and runway designators. Centre-line, touchdown zone markings and aiming points. Displaced threshold arrows on Runway 23. Yellow chevrons pre 05 threshold. Taxiway marking aid(s): Taxiway Alpha - Black and white chequered box adjacent to Charlie denoting helicopter FATO area to be kept clear. Yellow centre-line all taxiways. Enhanced edge lines on sections of Alpha and Golf. CAT I Holding points on taxiway A,B,C,D,E,F,G,Y,Z. CAT II/III Holding points on A,G. Taxiway Charlie is closed to all arriving and departing aircraft. Appropriate paint markings are displayed on both runway and taxiway. Taxiway light(s): Colour coded alternate yellow/green centreline lights installed on exit taxiways at Links A, B, D, E, F and G to indicate when an aircraft has cleared the ILS LOC sensitive area. All taxiway directional signs and holding point signs are internally illuminated to the latest ICAO standard. Ground mounted alternately flashing yellow runway guard lights operating H24, are installed at the category I holding points on Links A,B,C,D,E,F,G & Y indicating to pilots that they are at the Category I holding points when taxiing for take off. Ground mounted alternately flashing yellow runway guard lights operating in Category II/III conditions, are installed at the category II/III holding points on Links A&G, indicating to pilots that they are at the Category II/III holding points when taxiing for take off.
3	Stop bars and runway guard lights (if any)	Red stop bars signifying holding positions for ILS Category I protection for Links A, B, D, E, F and G. Red stop bars signifying holding positions of ILS CAT II/III protection for Links A and G. All available stop bars are lit H24.
4	Other runway protection measures	-

5	Remarks	The apron is marked for nose-in/push-back parking only and operators should ensure that agents can supply tractor push-back facilities. The majority of stands are equipped with A-VDGS. A marshalling service will be provided for the minority of the remaining stands that do not have A-VDGS fitted. Flight crew must not attempt to self-park if the A-VDGS is not activated or calibrated for their aircraft type, or no marshaller clearly present. Note that marshallers wear distinctive yellow and orange high visibility clothing, and unless otherwise explicitly advised will be using marshalling wands or bats. In the event of there being no activated A-VDGS displayed upon approach to the stand, or no marshaller indicating clearance to proceed, flight crews must: - Hold position on the taxiway centre-line; - Inform Air Traffic Control they are awaiting stand entry guidance; - Contact company to arrange activation. Note: ATC may request aircraft to 'report parked' this is not an instruction to self-park. In the event of a failure of the A-VDGS during parking, flight crews must: - Inform Air Traffic Control of a stand entry guidance failure; - Contact company to arrange a marshaller. On taxiway C,Y,Z edge delineated by blue reflective linlaners. Obstacle markings. WDI: 555228.00N 0042519.81W (LGTD), 555204.59N 0042645.05W (LGTD).

EGPF AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Glasgow CTR.
b) All flights, including General Aviation and Military flights, subject to the prior approval of the Operations Director, Glasgow Airport Ltd and to prior notification to Airport Coordination Ltd acting as agent for Glasgow Airport Ltd. Requests for ad-hoc slot allocations should be made to ACL during working hours 0830-1700 (0730-1600) Monday to Friday by email: lonacxh@acl-uk.org; or Tel: +44 (0)161-493 1850, Fax:+44 (0)161-493 1853, or at all other times to GLAL Duty Manager on Tel: +44 (0)141-848 4510/+44(0)7831-170676. Please note – the Out of Hours service will only deal with short term ad-hoc schedule changes and new requests. All other changes must be submitted

to ACL during normal office hours. OCS account holders can add, change and cancel slots at any time on the online coordination portal: https://www.online-coordination.com.

c) All pleasure, training and non-business General Aviation traffic is subject to prior notification to Air Traffic Control, preferably via AFPEx or alternative flight planning systems. The filing of a flight plan does not constitute permission to use Glasgow Airport. Restrictions may be implemented at anytime.
d) Transit flights will only be accepted with prior approval.
e) Pilots of international arriving or departing GA aircraft are responsible for presenting their passengers to Customs and Immigration. Transport to and from the Customs Office will be provided by a handling agent.
f) Airline operators are requested to note that stand availability in a diversion situation is extremely limited at Glasgow Airport, especially for wide-bodied aircraft.
g) It is a requirement that every airline using Glasgow Airport must have local orders compatible with GLAL Emergency Orders. Airlines, General Aviation operators and Flying clubs should also note that it is their responsibility to recover disabled aircraft and aircraft wreckage and have appropriate arrangements in place before commencing flying operations into the aerodrome. GLAL will act as the co-ordinating body throughout the recovery operation and has only very limited equipment which might be used to salvage disabled aircraft.
h) No aircraft are permitted to park on the ground for more than 24 hours without prior approval from GLAL.
i) Fixed Electrical Ground Power must be used wherever available and serviceable. Use of GPU and APU should be limited to minimise environmental impact.
j) Microlights and gyrocopters are not allowed to use the aerodrome unless in emergency.
k) All users of Glasgow Airport must comply with current Glasgow Airport Conditions of use.
l) Operators of A380 aircraft may designate Glasgow as a nominated diversionary aerodrome subject to prior agreement with the Airside Operations and an assessment of the facilities and infrastructure by the airline. The use of Glasgow as an alternate for A380 operations is also subject to prior CAA approval on an individual airline basis. Restrictions will be applied for handling more than two A380 aircraft at the same time.

2 GROUND MOVEMENT

a) All aircraft making requests for taxiing or towing clearance on the GMC frequency should state their location in the initial call.
b) Aircraft pushing/powering back must face the direction of taxi and be aligned on the taxiway centre-line before commencing taxi.
c) Aircrew can request ATC clearance up to 15 minutes before EOBT. Departing aircraft on first contact with Glasgow ATC must state aircraft type, stand number and the code letter of the latest ATIS received.
d) Crews should be in receipt of departure clearance prior to requesting push and start.
e) Pre-departure clearance by 'Data Clearance Link' (DCL) is available at Glasgow for suitably equipped aircraft. DCL must be compliant with ARINC 623-2 and Eurocae ED 85-A. DCL is available from EOBT -25 until EOBT +15 minutes.

   DCL Clearances will not be issued if requested later than EOBT +15 minutes. Successful clearances must be ACCEPTED within 5 minutes of receipt or a 'Revert to voice' message will be received.

   Do not use the free text option on DCL. Glasgow ATC are unable to interact with this and it causes the A-DCL to fail, resulting in either manual ATC intervention or revert to voice. If any data errors are detected by the system or the controller, a 'revert to voice' message will be received. If the attempt to obtain a clearance is unsuccessful the aircraft should revert to voice RTF. Further details of the DCL service may be obtained from ATC Operations on +44 (0)141-840-8029.

f) Particular attention is drawn to a roadway system that exists at the tail of all stands. Flight crew are reminded of the extreme importance of maintaining a careful lookout at all times and are at all times responsible for wing tip clearance. The taxiway lighting and guidance markings are an aid to pilots when they are operating on the manoeuvring area . Notwithstanding the taxiway guidance markings, pilots continue to remain responsible for wing tip clearance.
g) All stands are nose-in/push back. Pilots requiring services on Apron areas, including Customs and Immigration, must ensure that a suitable tow bar is available.
h) Before the Aircraft Commander calls for push-back they must ensure that the tug driver is in the tug, ready to push. Stands 6, 8, 19, 21, 30L, 30, 30R, 32, 35, 37 and 40 have 2 push-back options. ATC will specify the direction of push from these stands, and this must be passed to the ground crew. If it is not passed the tug driver will not commence push-back and clarification will be sought from the aircraft commander. If ATC issue a push from these stands, a non-standard push from any stand or a conditional push-back clearance, ATC must be advised if the Aircraft Commander is not in two-way headset communication with the tug crew.
i) A black and white chequered box adjacent to Charlie denotes the FATO area. This area should be kept clear of aircraft and vehicles unless prior ATC approval has been granted.
j) Special procedures for stand safeguarding are in place for A380 parking on stand 30. This involves additional measures to restrict vehicle movements in the immediate area. If necessary, aircraft will be held at the following locations prior to stand arrival. An Ops vehicle may be positioned to assist:

   i. After landing on R23 and vacating at G to hold short of Apron November.
   ii. After landing on R05 and vacating at A to hold abeam the ATC Control Tower.

k) In CAT 1 conditions when Runway 23 is the nominated runway in use the following applies to A380 movements:

   i. Departure

      Taxi via A to hold as required at hold A2. When cleared to line up and depart via A1. No right turns are permitted at this intersection due to runway width of 45 M and lack of turning area.

   ii. Arrival

      Vacate the runway at G taxiway.

With Runway 05 in use:

i. Departure

Taxi via G to hold G2. When cleared line up via G1 and depart.

ii. Arrival

Vacate via A or B taxiway as directed by ATC.

l) A380 aircraft – Reduced taxiway centre-line to object clearance of 47.5 M applies along taxiways:

Alpha 1 to ATC Tower: Taxiway (51 M strip)

ATC Tower to Golf 2: Taxilane (47.5 M strip)

Golf 2 to Golf 1: Taxiway (51 M strip)

m) Red light vehicle road holding lights are installed on apron roadway system cul-de-sac K, L, M and N to stop vehicle traffic during Code F movements and may be visible to aircraft.
n) Jet aircraft are to engage minimum power when operating in Area Juliet due to the proximity of light aircraft operations in this area.
o) Taxiway Yankee is used as a dual direction taxiway for light aircraft. To aid the flow of traffic, aircraft should taxi to the right or as directed by ATC.
p) Remote Holding.

i. Any requests from aircraft for remote holding require approval of Airside Operations. In cul-de-sac N pushback to remote hold nose out on the mirror stand on the opposite side of the cul-de-sac will normally be approved when the stand is not required for use.

Airside Operations will endeavour to attend to help ensure safety of the airside roads, but this is not mandated. The pushback instruction should include a reminder to face nose out e.g., “(Callsign), Push and reposition to face nose out on Stand 40 is approved”.

For the subsequent taxi off stand, an airside operations presence is required, and the aircraft should be instructed to taxi off stand at absolute power to protect the head of stand area. In this scenario, where aircraft are waiting for a CTOT improvement, controllers should use ‘SEND READY +15’ as the default ready message to allow Airside Operations time to reach the stand before the aircraft commences taxi.

Any remote hold in an area substantially away from the gate (for example area Q) will require the aircraft to taxi and then either wait with engine(s) running or shutdown in their remote hold location.

ii. Within Area Q, when being used for remote hold, marshallers assistance can be provided on request, and is mandatory for any aircraft larger than Code C. Extended towing of loaded aircraft is not permitted due to operating limitations imposed by the manufacturer to prevent overstressing the landing gear at higher weights.

3 CAT II/III OPERATIONS

a) Runways 05 and 23, subject to serviceability of the required facilities, are suitable for Category II/III operations by operators whose minima have been accepted by the Civil Aviation Authority.
b) During Category II/III operations special ATC procedures (Low Visibility Procedures) will be applied. Pilots will be informed when these procedures are in force by ATIS or by RTF.
c) Departing Aircraft: ATC will require departing aircraft to use the Category II/III holding points at Links A2 and G2 as appropriate. Intermediate take-off points will not be used.
d) Arriving Aircraft: Vacate Runway 05/23 at Link A or Link G, unless otherwise instructed. ATC may instruct pilots to use intermediate Links when Cat II/III operations are necessary because of a low cloud ceiling and not due to poor visibility. Pilots should delay the call 'runway vacated' until the aircraft is established on the taxiway and clear of the link.
e) During CAT II/III conditions A380 will hold at A3 and G2. A380 Arrivals will vacate at A or G.
f) Ground Movement Radar (GMR) is normally available to monitor pilot 'runway vacated' reports. When GMR is not available to ATC, runway (LSA) vacation will be confirmed by receipt of a pilot report that the tail of the aircraft has passed the last of the alternate amber and green centre-line lights. (These lights denote the extent of the ILS Localizer Sensitive Area).

4 WARNINGS

a) Except for light signals ground signals will not be displayed
b) Due to the soft nature of the grass verges, pilots should exercise due caution when taxiing
c) Large numbers of Greylag/Canada Geese and Whooper Swans are present in the vicinity of the airport mainly from September to April. Flocks are regularly in excess of 100 birds and can be seen flying up to 500 FT. Active bird control is conducted with ATC liaison.
d) When the lead off lights at Link Delta, Echo and Foxtrot are selected, the stopbars are deselected. Vehicles and/or aircraft travelling West to East on Taxiway Golf may mistakenly follow the (runway) lead off lights rather than the taxiway lights and subsequently onto the runway.

5 HELICOPTER OPERATIONS

a) ATC clearance must be obtained before ground or hover taxi commences.

b) Inbound helicopters will be routed to the threshold of the runway in use before either ground or air taxiing to their alighting point ('H').
c) Helicopters, inbound and outbound, are to avoid overflying airport buildings whenever possible.
d) CASEVAC helicopters will be directed by ATC to alight on the main apron taxiway, then to ground taxi to an aircraft stand.
e) Helicopters operating to and from the Gama apron must follow the taxiway centre-lines unless specific approval is given for use of the Gama FATO.
f) Procedures for use of the Gama FATO are not published publicly and are restricted only to use by helicopters in operation of medical flights to and from the Gama apron.
g) Helicopters using the Gama FATO are to avoid overflying any parked or stationary vehicles and aircraft wherever possible.

6 USE OF RUNWAYS

a) Aircraft requiring the full length of Runway 23 for take-off have to back-track the runway and turn for take-off within the extension of the runway which is 92 M long and 61 M wide. Aircraft should enter the runway at holding point B1 and taxi to the extension. Code E nor F aircraft are not permitted to execute 180º turns on Runway 05/23.
b) Pilots of departing aircraft wishing to turn right from Link A1 to use the full length of runway, should advise ATC before reaching the holding point on taxiway.
c) Link Taxiway Restrictions (Code A – E)

i. Any aircraft (Code A to E inclusive) may exit Runway 05 via A1, B1 or E1, as the turn to vacate Runway 05 via D1 and F1 is extremely sharp and would require an aircraft to make a turn of almost 180°.
ii. Any aircraft (Code A to E inclusive) may exit Runway 23 via A1, B1, D1, E1, F1 or G1. It should be noted, however, that only Code A to C (inclusive) aircraft are permitted to turn left from B1 to A1 or right turn from A1 to B1. Code D and E aircraft shall not be permitted to carry out this manoeuvre under any circumstances.

d) Link Taxiway Restrictions (Code F)

Taxiway links are permitted for use in the following directions/circumstances for A380 movements.

Taxiway Link	Direction/Route	Restriction
ALPHA	Via ALPHA enter and vacate.	No additional restriction.
BRAVO	From SW direction only, via BRAVO enter Runway 23 turn left. Via BRAVO vacate Runway 05 turn right.	No additional restriction.
DELTA	From SW direction only, via DELTA enter Runway 05 turn right. Via DELTA vacate Runway 23 turn right.	Only to be used in contingency situations.
ECHO	From NE direction only, via ECHO enter Runway 05/23 turn right or left. Via ECHO vacate Runway 05 turn left.	Only to be used in contingency situations with use of lead vehicle.
FOXTROT	From NE direction only, via FOXTROT enter Runway 05 turn right. Via FOXTROT vacate Runway 23 turn left.	Only to be used in contingency situations. Over-steering turn from TWY F to TWY G must be used with extreme caution.
GOLF	Via GOLF enter and vacate.	No additional restriction.

e) Following runway resurfacing in 2017 the section of runway between 23 threshold to Link F exhibits fast drying capability after periods of wet conditions. This section extends to 8.5 M either side of the runway centre-line.

7 TRAINING

a) The use of the aerodrome for training purposes is subject to the permission of Airside Operations, through ATC Tel: 0141-840 8029.
b) General training flight acceptance criteria (except by prior agreement with the Head of Aerodrome Operations or deputy):

i. Flying training, including training circuits of repeated approaches, go-arounds and landings, is permitted between 0800-2200 (0700-2100);
ii. The single take-off, go-around and/or full stop landing of an aircraft on a training flight will be permitted between 0600-0800 (0500-0700) and 2200-0800 (2100-0700), subject to ATC's priorities;
iii. Visual training circuits are restricted to aircraft below 5700 KG. Aircraft above 5700 KG must carry out ILS instrument approaches and adhere to noise abatement procedures. No helicopter training is permitted without prior approval from Airside Operations and ATC.

c) Training may be curtailed if significant noise complaints are received.

EGPF AD 2.21 NOISE ABATEMENT PROCEDURES

a) Operators of all aircraft inbound or outbound from the aerodrome are required to conform to the following procedures notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger and for complying with the instructions of ATC.

i. Operators of all aircraft should ensure that at all times their aircraft conform to the noise abatement techniques laid down for that type of aircraft and that disturbance to the areas near the aerodrome is kept to a minimum.

ii. After take-off all aircraft whether operating from Runway 05 or 23 by day or night should expedite their climb to 1500 FT QFE before reducing power to maintain a minimum rate of climb of 500 FT per minute until 3000 FT QFE.
iii. For Runway 23, aircraft using the ILS shall not descend below 2000 FT QFE before intercepting the glidepath nor thereafter fly below it unless instructed by Radar. Aircraft landing without assistance from the ILS or Radar shall follow a descent path which will not result in their being at any time lower than an approach path consistent with a 3° glidepath.
iv. For Runway 05, jet aircraft using the ILS shall not descend below 2000 FT QFE before intercepting the glidepath. Propeller driven aircraft may, when instructed by Radar, be descended to 1600 FT QFE. Aircraft landing without the assistance of ILS or Radar shall follow a descent path which will not result in their being at any time lower than an approach path consistent with a 3° glidepath.
v. For visual approaches to Runways 05 or 23 the following limitations will apply: All aircraft whose MTWA exceeds 5700 KG must route via 5 NM from the runway threshold and maintain 1500 FT QFE until established on final approach.
vi. All aircraft using the aerodrome shall, after take-off or 'go- around' be operated in such a way that it will not cause more than 94 dB(A) by day (0600-2330 (0500-2230)) or 87 dB (A) by night (2330-0600 (2230-0500)) at the relevant noise monitoring points; the measured noise reading for the event will be taken as the highest recorded at any single noise monitoring terminal.
vii. Jet aircraft failing to meet the standards specified in Part II, Chapter 3, Volume 1 of Annex 16 to the convention on International Civil Aviation are not permitted to depart from Glasgow Airport between the hours of 2330-0559 (2230-0459) except in special circumstances. Such movements as may be permitted will be at the discretion of the Operations Director from whom specific written permission must be obtained in advance. The Operations Director also has discretion to permit the departure of delayed flights not meeting Chapter 3 standards in exceptional circumstances.

b) Noise Abatement Procedures.

i. The Noise Abatement Procedures specified below are compatible with ATC requirements and shall apply in both IMC and VMC.
ii. The tracks to be flown by all departing jet aircraft and by all other departing aircraft of more than 5700 KG MTWA unless otherwise instructed by ATC or unless deviations are required in the interests of safety.
iii. The Noise Abatement Procedures are incorporated in ATC Standard Instrument Departure Clearances (SID) where appropriate. IFR jet aircraft operating on routes where the SID does not incorporate the Noise Abatement Procedures will be issued with a non-standard clearance by ATC.

Take-off Runway	Noise Abatement Procedure
05	Climb straight ahead to 5 DME. Note that for aircraft departing on the SID via LUSIV, the Noise Abatement Procedures terminate at 5 DME.
23	Climb straight ahead to 5 DME.

c) For environmental reasons the use of reverse thrust/pitch should be avoided when possible.

EGPF AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) Inbound Aircraft other than on Airways

i. Aircraft wishing to enter the CTR/CTA or TMA under IFR direct from the FIR must observe the normal procedure for joining Controlled Airspace. For aircraft joining from the West a Reporting Point ROBBO (GOW RDL 275°/16 NM) is established at the TMA Boundary and pilots should anticipate joining clearance via this point.
ii. Pilots inbound to Glasgow under VFR must contact Glasgow Approach Control prior to entering the CTR/CTA and may be required by ATC to route via the published Visual Reference Points. (See paragraph 8).

b) Inbound Aircraft on Airways

i. Aircraft flying in the Airways System will be cleared into the TMA/CTR/CTA without having to request a specific entry clearance.
ii. The standard initial routes for inbound aircraft shown in the table below may be varied at the discretion of ATC (eg for traffic reasons or to allow traffic to be sequenced by radar).

c) Arrival Routes

Approach from	Via	Route
North	N560 FIR	FOYLE - GOW INBAS - FOYLE
Northeast	P600	PTH VOR - GRICE - STIRA
East	FIR	(SAB VOR) - TMA Boundry - TLA - LANAK
Southeast	N601 FIR	ABEVI - TLA - LANAK TLA - LANAK
Southwest	P600	BLACA - TRN **(Note 1)**
West	FIR	ROBBO - GOW
Northwest	AWYs	TMA Boundary - GOW

Note: *Exceptionally aircraft may be routed onwards via LANAK for tactical ATC purposes.*

In order to increase ATC flexibility Speed Limit Points (SLP) are established for arrival routes to Glasgow Airport. Inbound aircraft at FL 140 or below should normally be flown at 250 KT or less when crossing the SLPs. In certain weather conditions, or for reasons of safety, pilots may not be able to comply with the Speed Limit quoted above. In these circumstances they should inform ATC immediately, stating the minimum speed acceptable. Tactical speed control additional to the Speed Limit detailed above may be applied by the Radar Controller as detailed at paragraph d v.

d) Approach Procedures with Radar Control

i. When Glasgow inbound traffic is being sequenced by Radar, the Approach Procedures will be flown under directions from the Approach Radar Controller and will consist of that part of the approach between the Terminal Holding Fix and the Final Approach Path. When Holding Procedures are not in use, radar sequencing may commence before the Terminal Holding Fix.
ii. Pilots should plan their flight profile in such a manner as to be able to achieve the Minimum Holding Level at the appropriate holding point.
iii. When an aircraft is under Approach Radar Control, changes of heading or Flight Level/Altitude will be made only on instructions from the Radar Controller except in the case of radio communication failure in the aircraft or at the Radar Unit.
iv. Headings and Flight Levels/Altitudes at which to leave the holding areas will be passed by ATC. Radar vectors will be given and descent clearance will include an estimate of track distance to touchdown. Further distance information will be given between the initial descent clearance and intercept heading to the ILS.
v. Speed Control may be applied on a tactical basis to the extent determined necessary by the Radar Controller. Aircraft unable to conform to the speeds specified by the Radar Controller should inform him immediately and state what speeds will be used. In the interests of accurate spacing, pilots are requested to comply with speed adjustments as promptly as is feasible within their own operational constraints, and should advise ATC if circumstances necessitate a change of speed for aircraft performance reasons.
vi. GPWS: Special Procedure for Radar Vectoring to Runway 23

1. In order to minimise the risk of nuisance GPWS warnings generated by the profile of the terrain in the vicinity of the Final Approach Track, a special procedure is in force for flights being radar vectored to Runway 23.
2. An essential element of the special procedure is the Speed Limit detailed in paragraph 4. Pilots exceeding the Speed Limit can expect to receive GPWS terrain alerts during the turn onto final approach. Pilots who are unable to comply with the Speed Limit of 250 KT due to weather conditions or operational safety must inform ATC immediately, stating the minimum speed acceptable.
3. Within the Radar Vectoring Area (RVA), and north of a line 105°/285° MAG through *555853N 0041340W (a point 9 NM from the runway 23 threshold on the extended centre-line) the minimum altitude allocated by ATC when radar vectoring aircraft will be 3500 FT.
4. ATC will not issue clearance for aircraft to descend below 3500 FT whilst they are north of the line described in paragraph d vi (2) unless the aircraft is established on the ILS localizer or on the Final Approach Track of a Surveillance Radar Approach or radar vectored VOR/ DME approach to Runway 23.

vii. In the event of radar failure, new instructions will be issued to each aircraft under radar control and the procedures as defined for approach without radar control will be put into effect.

e) Approach Procedures without Radar Control

When inbound traffic is not being sequenced by Radar, aircraft will be cleared from the Terminal Holding Facility via GOW VOR to carry out an Instrument Approach Procedure appropriate to the landing direction.

2 RADIO COMMUNICATIONS FAILURE PROCEDURES

In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedures notified at ENR 1.1.3 with the exceptions detailed below:

a) When complete communication failure occurs in the aircraft before ETA or before EAT when this has been received and acknowledged, the aircraft will:

i. Fly to the appropriate holding point;
ii. hold at the last assigned level until the last acknowledged ETA plus 10 minutes or EAT when this has been given;
iii. route direct to GOW at last assigned level;
iv. then commence descent for landing in accordance with the procedure detailed on the IAP charts and effect a landing within 30 minutes (or later if able to land visually).

b) If complete radio communication failure occurs after an aircraft has reported to ATC on reaching the holding point, the aircraft will:

i. Maintain the last assigned holding level at the appropriate holding point until:

1. ATA over holding point plus 10 minutes or 10 minutes after the last acknowledged communication with ATC, whichever is the later; or
2. EAT when this has been received and acknowledged;

ii. route direct to GOW at last assigned level;
iii. then commence descent for landing in accordance with the procedure detailed on the Instrument Approach charts and effect a landing within 30 minutes (or later if able to land visually).

c) In the event of complete radio failure in an aircraft which has been cleared for an IFR inter-aerodrome flight within the Scottish TMA the pilot will adopt the appropriate procedure as follows, depending upon the phase of flight:

i. If the aircraft is receiving a radar service and is within the RVA of the destination aerodrome, the pilot will adopt the appropriate loss of communication procedure for the runway-in-use as detailed in the RVA information at AD 2-EGPF-5-1. Landing must be effected within 30 minutes (or later if able to land visually);
ii. if the aircraft is either not receiving a radar service or is receiving a radar service but has not yet arrived within the RVA of the destination aerodrome, the pilot will proceed to the appropriate holding point at the destination aerodrome at the last assigned level or 4000 FT whichever is higher. He will then adopt the procedures in paragraph's b and c.

d) The routes and altitudes to be used when leaving the TMA and CTR/CTA in accordance with the procedures at ENR 1.1.3 are shown in the table; the route to be followed is dependent on the position of the aircraft at the time the decision to leave the CTR/CTA is made.

Position at time of decision	Route
Glasgow Airport GOW VOR	Track 035°T from facility at 3500 FT ALT until crossing the Glasgow CTR Boundary.

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Non-Airways IFR departing flights from Glasgow routeing in the open FIR to the West should anticipate ATC clearance to leave Controlled Airspace at ROBBO (GOW RDL 275°/16 NM), normally at an altitude below 6000 FT.
b) North Atlantic Departures

i. Due to the proximity of the Shanwick Oceanic boundary to Glasgow, pilots must consider timescales for submitting an 'RCL'. Refer to ENR 2.2, paragraph 3.8.2 for details.

4 SPEED LIMIT

a) A speed limitation of 250 KT applies to all aircraft whilst flying below FL 100.

5 VFR FLIGHTS

a) VFR flights in the CTR/CTA will be given routeing instructions and /or altitude restrictions in order to integrate VFR flights with other traffic.
b) Pilots should anticipate routeing instructions via the Visual Reference Points detailed in paragraph 8 or the routes detailed in paragraph 7.
c) Pilots of VFR flights are reminded of the requirement to remain in VMC at all times and to comply with the relevant parts of SERA and Rules of the Air, and must advise ATC if at any time they are unable to comply with the instructions issued.
d) For VFR flights at night, pilots should exercise caution and increased vigilance when identifying, and routing via, Ardmore Point and Inverkip Power Station VRPs.
e) **Helicopters:** Whenever possible helicopter flights in the Glasgow CTR/CTA will be cleared on direct routeings under VFR (or, when requested at night in the Glasgow Control Zone, on Special VFR clearance in accordance with the procedures for Special VFR flights).

6 SPECIAL VFR CLEARANCE

a) Clearance may be requested for Special VFR flight in IMC or at night within the Glasgow Control Zone and will be given whenever the traffic situation permits. These flights are subject to the general conditions laid down for Special VFR flights.
b) Special VFR clearance will include routeing and maximum altitude instructions and may not necessarily be confined to the Entry/Exit Lanes detailed at paragraph 7. Pilots holding a Private Pilots Licence (Aeroplanes) are reminded of the visibility requirements of Special VFR flights laid down in Schedule 8 of the Air Navigation Order 2005 and in the related notification at ENR 1-4-6, note 4, which may require them to request routeing via the notified Entry/Exit Lanes
c) Pilots are reminded that they must at all times when operating on Special VFR clearance, remain clear of cloud and in sight of the surface and in flight conditions which will enable them to determine their flight path and keep clear of obstacles. Due to the nature of the terrain in the vicinity of Glasgow Airport radar vectoring will not normally be applied to aircraft operating on Special VFR clearance.
d) Pilots are reminded that a Special VFR clearance applies only to flight within the CTR and does not extend to flight within the Glasgow CTAs or the surrounding Airspace of the Scottish TMA.
e) Special VFR clearance will not normally be granted for flights operating in VMC or for flights by aircraft exceeding 5700 KG MTWA.

7 ENTRY/EXIT LANES

a) To permit aircraft to operate to and from Glasgow Airport in IMC but not under IFR the following entry/exit lanes have been established for use, under the conditions stated, as follows:

i.

1. A main lane 3 NM wide, with centre-line the middle of the River Clyde, extending from the northwestern boundary of the Glasgow Control Zone following the course of the River Clyde to the point at which it joins the Glasgow Aerodrome Traffic Zone;
2. a branch lane, 3 NM wide, extending from 555954N 0043440W (a point on the northern boundary of the Glasgow Control Zone near Alexandria VRP), southwards, with centre-line based on the River Leven, to Dumbarton, thence to 555550N 0043345W (a point on the River Clyde where the main lane is joined);
3. a lane 3 NM wide, centred on the A726 road extending from the Eastern edge of the Glasgow Control Zone at East Kilbride VRP to the Glasgow Aerodrome Traffic Zone.

ii. use of the lanes is subject to clearance by Glasgow ATC and the carriage of the Glasgow Approach Control frequency;
iii. aircraft using the lanes must remain clear of cloud and in sight of the ground, or water, not above 3000 FT (Glasgow QNH), and in flight visibility of not less than 3 KM;

iv. an aircraft using a lane shall keep the centre-line on its left, unless otherwise instructed by ATC for separation purposes. In these circumstances ATC will pass traffic information to the aircraft concerned;
v. aircraft using the lanes when the reported visibility at Glasgow Airport is in excess of 4 KM may be instructed by ATC, dependant upon the runway-in-use at Glasgow Airport to fly:

1. between Glasgow Airport and Greenock/Ardmore Point; north of the north bank or south of the south bank of the River Clyde; or
2. between Glasgow Airport and Loch Lomond (Alexandria); north of the Clyde/east of the Leven or south of the Clyde/west of the Leven;
3. between Glasgow Airport and East Kilbride, north of the A726 or south of the A726.

vi. pilots of aircraft are responsible for maintaining adequate clearance from the ground or other obstacles.

b) Additionally, to permit the effective integration of traffic, flights operating in VMC and under VFR may be required by ATC to follow these routes as detailed in paragraph 5.

8 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

9 MICROLIGHT OPERATIONS IN THE GLASGOW CONTROL ZONE/CONTROL AREAS

a) Clearances for microlight aircraft to operate within the Glasgow CTR/CTA may be issued under the standard conditions for access to Class D Airspace under VFR.
b) ATC Clearance must be requested from Glasgow Radar on channel 119.105. Non-radio operations are not permitted.
c) Microlight pilots should plan their flights to remain at least 3 NM from the Runway 05/23 extended centre-line or, if crossing the extended centre-line, to remain at or below 1000 FT ALT and at a range of not less than 7 NM from Glasgow Airport. More direct routings may be available subject to prevailing traffic conditions and controller workload.

10 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside the Glasgow controlled airspace within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Glasgow Radar, channel 119.105, are encouraged to select SSR code 2620.

555840N 0050000W - 554333N 0050000W -
553302N 0042918W - 553627N 0035327W -
554806N 0035411W - 555724N 0035417W -
561150N 0034633W - 560900N 0042141W -
555840N 0050000W.

b) Selection of 2620 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Glasgow controlled airspace at all times.
c) Whilst squawking 2620, pilots should be aware that Glasgow Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 2620 shall be deselected.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1938
HEIGHTS IN FEET AGL (1030)

GLASGOW

MINIMUM INITIAL ALTITUDE
For coordinates see EGPF 5-2.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, or
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3500**, or last assigned level if higher, to **GOW VOR**†.
Intermediate and Final Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **GOW VOR**†.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3 or the procedure for the Scottish TMA & Glasgow CTA detailed at EGPF AD 2.22.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
5. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
6. **RWY 05: Further descent to 2000/1600 may be given within the approach areas shown when an aircraft is either established on the final approach track or an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track. RWY 23: Pilots should not accept descent below 3000FT unless established on a 40° or less, closing heading to the final approach track and within 9.5NM from the runway threshold when closing from the south and 8NM from the runway threshold when closing from the north and instructed to intercept the ILS LOC or specified VOR approach radial.**
7. **RWY 23: Aircraft shall not be vectored to an NDB approach.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (12/26): CLYDE HELIPORT REVISED.

AERO INFO DATE 24 AUG 26

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

GLASGOW

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **5500** in the sector defined by the lateral limits; 554902N 0053728W thence clockwise by an arc of a circle 40NM centred on 555214N 0042645W to 560815N 0032129W - 560218N 0034604W thence anticlockwise by an arc of a circle 25NM centred on 555214N 0042645W - 555019N 0051058W - 554902N 0053728W.

b) **4000** in the sector defined by the lateral limits; 554902N 0053728W - 555029N 0050726W thence anticlockwise by an arc of a circle 23NM centered on 555214N 0042645W to 553612N 0045552W - 553448N 0045823W thence anticlockwise by an arc of a circle 25NM centred on 555214N 0042645W to 560218N 0034604W - 560815N 0032129W thence clockwise by an arc of a circle 40NM centred on 555214N 0042645W to 554902N 0053728W.

c) **4800** in the sector defined by the lateral limits; 555019N 0051058W thence clockwise by an arc of a circle 25NM centred on 555214N 0042645W to 560218N 0034604W - 560019N 0035413W thence anticlockwise by an arc of a circle 20NM centred on 555214N 0042645W to 561010N 0041107W - 560541N 0041503W thence anticlockwise by an arc of a circle 15NM centred on 555214N 0042645W to 555107N 0045317W - 555019N 0051058W.

d) **3900** in the sector defined by the lateral limits; 560059N 0044824W thence clockwise by an arc of a circle 15NM centred on 555214N 0042645W to 560707N 0042359W - 560409N 0042433W thence anticlockwise by an arc of a circle 12NM centred on 555214N 0042645W to 560333N 0043345W - 560236N 0043310W thence anticlockwise by an arc of a circle 11NM centred on 555214N 0042645W to 555839N 0044236W - 560059N 0044824W.

e) **3000** in the sector defined by the lateral limits; 555029N 0050726W - 555107N 0045317W thence clockwise by an arc of a circle 15NM centred on 555214N 0042645W to 560059N 0044824W - 555839N 0044236W thence clockwise by an arc of a circle 11NM centred on 555214N 0042645W to 560236N 0043310W - 560333N 0043345W thence clockwise by an arc of a circle 12NM centred on 555214N 0042645W to 560409N 0042433W - 560707N 0042359W thence clockwise by an arc of a circle 15NM centred on 555214N 0042645W to 560541N 0041503W - 561010N 0041107W thence clockwise by an arc of a circle 20NM centred on 555214N 0042645W to 560019N 0035413W - 560218N 0034604W thence clockwise by an arc of a circle 25NM centred on 555214N 0042645W to 553448N 0045823W - 553612N 0045552W thence clockwise by an arc of a circle 23NM centred on 555214N 0042645W to 555029N 0050726W.

For further descent see note 6 in General Information.

AERO INFO DATE 27 MAR 17

STANDARD DEPARTURE CHART - INSTRUMENT (SID) - ICAO

DISTANCES IN NAUTICAL MILES
BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ALTITUDES AND ELEVATIONS ARE IN FEET

GLASGOW
NORBO (Jet aircraft only)

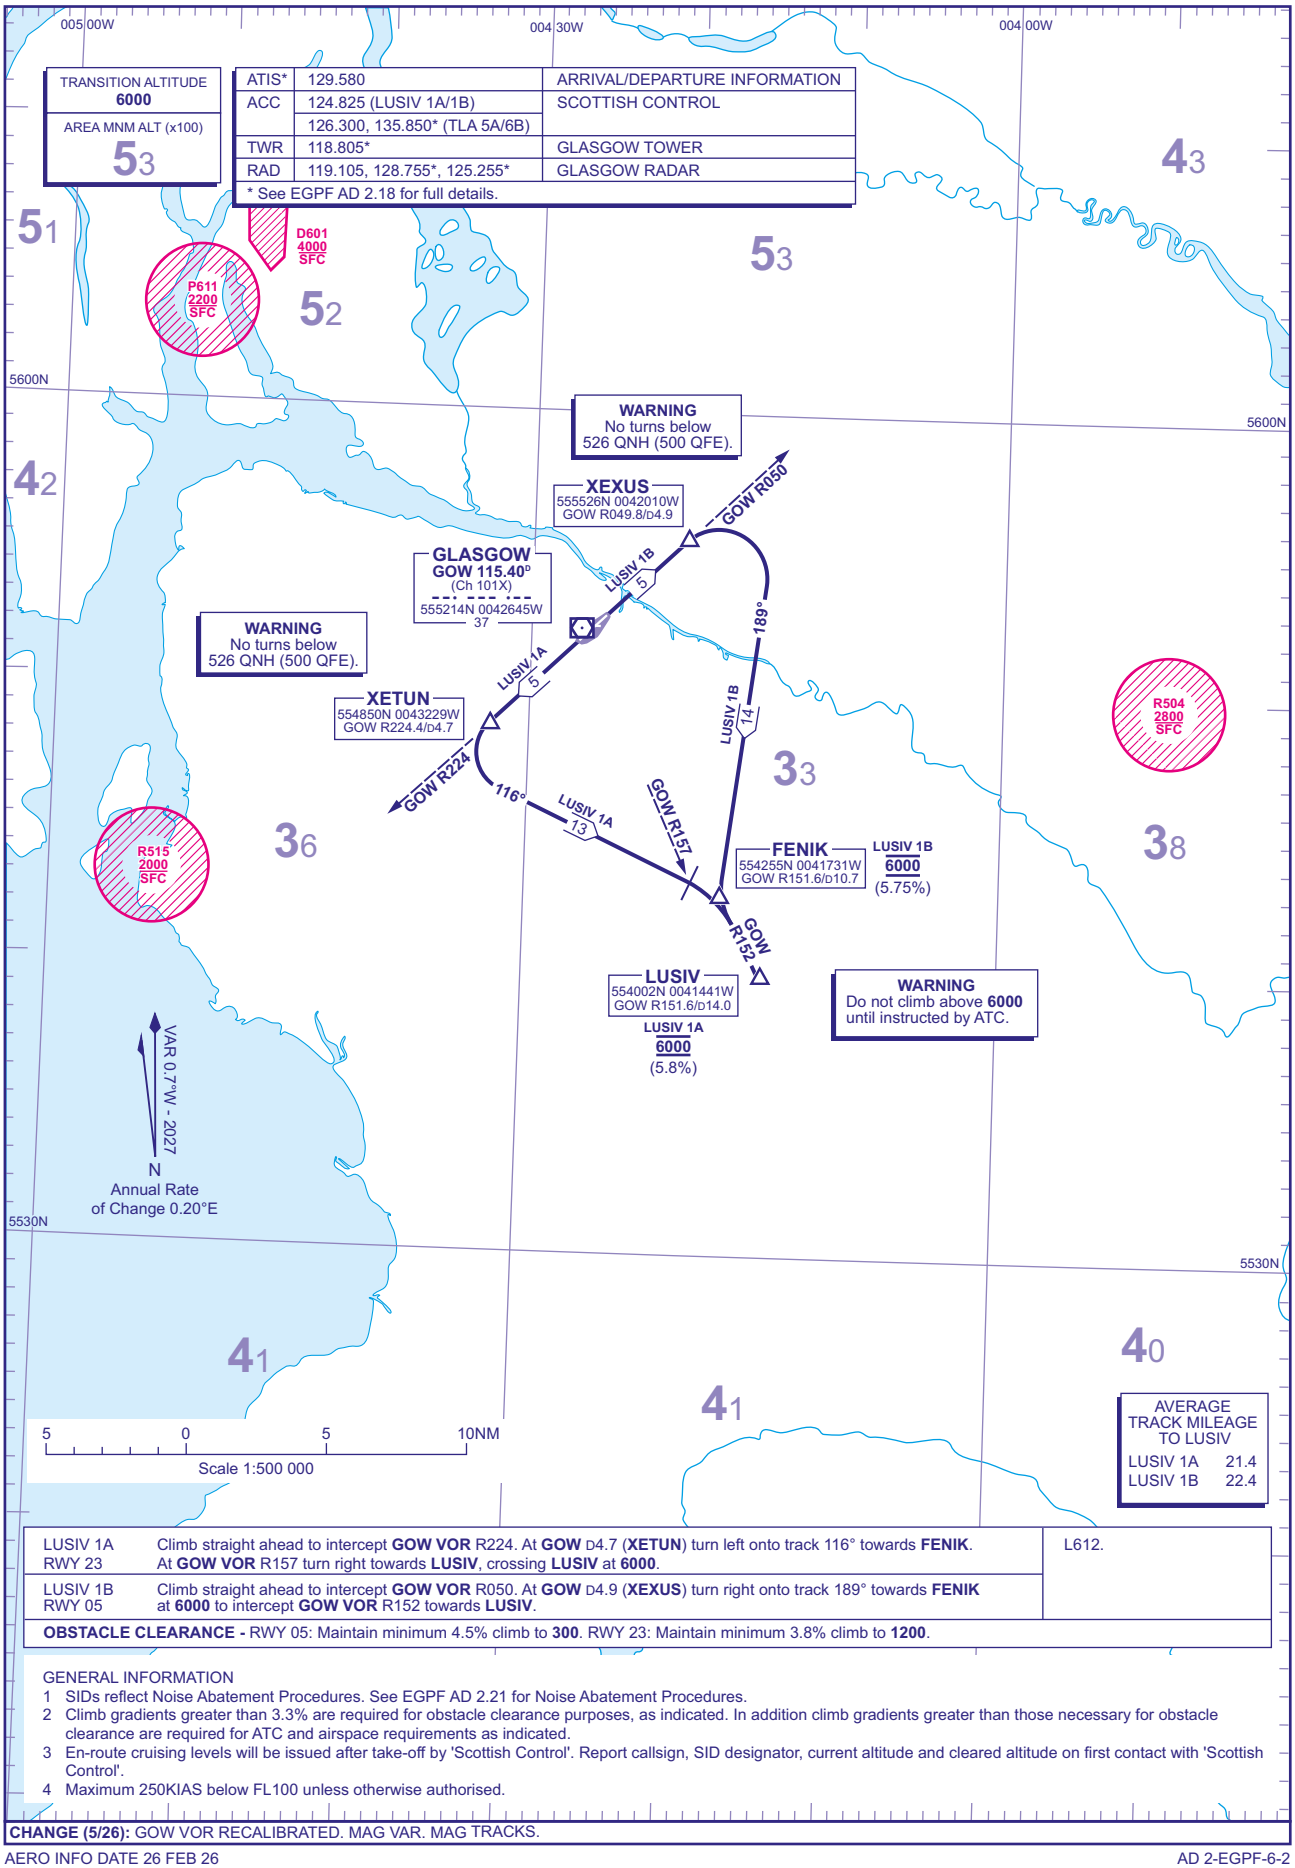
ATIS*	129.580	ARRIVAL/DEPARTURE INFORMATION
ACC	124.825	SCOTTISH CONTROL
TWR	118.805*	GLASGOW TOWER
RAD	119.105, 128.755*, 125.255*	GLASGOW RADAR
* See EGPF AD 2.18 for full details.		

AVERAGE TRACK MILEAGE TO NORBO

NORBO 1H	20
NORBO 1J	40

NORBO 1H RWY 23	Climb straight ahead to intercept **GOW VOR** R225. Cross **GOW** D12 **5000** or above. Cross **GOW** D14 at **6000** then turn left onto **TRN VOR** R003 to **NORBO**.	T256, L186, Y96.
OBSTACLE CLEARANCE - RWY 23: Maintain minimum 3.8% climb to **1200**.		
NORBO 1J RWY 05	Climb straight ahead to intercept **GOW VOR** R050. Cross **GOW** D4.9 (**XEXUS**) **2000** or above then turn left onto track 245° to **ELBAN** (**TRN VOR** R014.6), crossing **ELBAN** at **6000** (7%), to intercept **PTH VOR** R233. At **TRN VOR** R008 turn left onto **TRN VOR** R003 to **NORBO**.	T256, L186, Y96.
OBSTACLE CLEARANCE - RWY 05: Maintain minimum 4.5% climb to **1500**.		

GENERAL INFORMATION
1 SIDs reflect Noise Abatement Procedures. See EGPF AD 2.21 for Noise Abatement Procedures.
2 Climb gradients greater than 3.3% are required for obstacle clearance purposes, as indicated. In addition climb gradients greater than those necessary for obstacle clearance are required for ATC and airspace requirements as indicated.
3 En-route cruising levels will be issued after take-off by 'Scottish Control'. Report callsign, SID designator, current altitude and cleared altitude on first contact with 'Scottish Control'.
4 Maximum 250KIAS below FL100 unless otherwise authorised.
5. Expect first CPDLC Data Link Authority to be EGPX.



CHANGE (13/26): ELBAN PTH VOR FIX.

ALTERNATIVE PROCEDURE (FROM VOR GOW HOLD)
As for main procedure except fly outbound baseturn on GOW VOR R217 (CAT A,B), R204 (CAT C,D).

AIRCRAFT UNABLE TO RECEIVE DME I-UU Advise ATC. Equivalent radar ranges will be provided at 10NM outbound and at 8NM and 4NM inbound.

NOTE
1. Aircraft commencing the procedure from the hold will normally do so from **not below 4000**.
2. Position overhead holding fixes according to inbound routing as cleared by ATC. The normal cleared altitude at the respective terminal fix is **7000**. As this altitude is above the Transition Level, aircraft will be instructed to fly the appropriate flight level.
3. Arrivals may be radar vectored by ATC from or before the appropriate terminal fix directly into the intermediate/final approach track.

CHANGE (12/26): SPECIFICATION UPDATE.

7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	GA Agreement aerodrome. Refer to GEN 1.2 for notification requirements. Designated aerodrome for Special Branch purposes.

EGBJ AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Fri 0830-1930 (0730-1830); Sat, Sun 0900-1800 (0800-1830); and by arrangement.
2	Customs and immigration	As AD hours
3	Health and sanitation	-
4	AIS Briefing Office	As AD hours. Self briefing.
5	ATS Reporting Office (ARO)	As AD hours. Located in Terminal building, no access to Control Tower.
6	MET Briefing Office	As AD hours. Self briefing.
7	ATS	Mon-Fri 0830-1930 (0730-1830); Sat, Sun 0900-1800 (0800-1830); and by arrangement. See also AD 2.18.
8	Fuelling	As AD hours. Assisted fuelling available upon opening and until 15 minutes prior to closing.
9	Handling	-
10	Security	During public transport operations and by arrangement.
11	De-icing	-
12	Remarks	Aerodrome is strictly PPR. PPR must still be obtained in addition to the filing of a flight plan. Commanders shall book in with operations on Tel: 01452-857700 Ext 223. Certain flights not requiring Licensed facilities may operate H24 strictly by prior arrangement.

EGBJ AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	-
2	Fuel and oil types	AVTUR JET A-1 (All JET-A1 Pre mixed with AL48), AVGAS 100LL Aviation greases., W80, W100, 100, S80, Multigrade, Turbine oils
3	Fuelling facilities/capacity	Jet A-1 Mobile bowsers 127,000 LT. AVGAS fixed installation 52,000 LT.
4	De-icing facilities	-
5	Hangar space for visiting aircraft	By arrangement.
6	Repair facilities for visiting aircraft	Full up to 5700 KG AUW Rotary and fixed-wing.

7	Remarks	Mandatory handling may be applicable, see aerodrome scale of charges for further information. Aircraft handling agencies are: Weston Aviation: 01452-933698; gloucestershire@westonaviation.com. Gloucestershire Airport Operations: 01452-857700; briefing@gloucestershireairport.co.uk. The Little Jet Company: 01452-857606; info@thelittlejetcompany.com. Flight Partner: 01452-856222; ops@flightpartner.co.uk.

EGBJ AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotels in vicinity.
2	Restaurants	On AD.
3	Transportation	Taxis, Car hire, Buses. Nearest station Cheltenham 2.5 NM.
4	Medical facilities	Limited First Aid.
5	Bank and Post Office	Within 1.5 NM vicinity of AD.
6	Tourist Office	Local information available in Terminal. Nearest office Cheltenham 2.5 NM.
7	Remarks	Accommodation and transportation arrangements can be made via Handling Agent or Aerodrome Ops.

EGBJ AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A4 Category 5 available on request.
2	Rescue equipment	1 x MFV plus 1 x TACR 3. Hydraulic cutting equipment.
3	Capability for removal of disabled aircraft	Limited. Details from Aerodrome Authority.
4	Remarks	Flights operating for the public transport of passengers or otherwise requiring the use of a licensed aerodrome, will automatically be provided with the appropriate RFFS Category. A minimum quantity of 5250 L of water and 586 L of concentrate Level C foam is deployable.

EGBJ AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	-
2	Clearance priorities	Aerodrome will be declared 'Snow Closed'.
3	Remarks	No method of braking action assessment available.

EGBJ AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	A Surface: Asphalt PCR 253/F/B/W/U MAINTENANCE AREA Surface: Asphalt - TOWER APRON Surface: Asphalt -
2	Taxiway width, surface and strength	Taxiway A: 11 M Surface: Asphalt PCR 253/F/B/W/U Taxiway B: 14 M Surface: Asphalt - Taxiway C: 14 M Surface: Asphalt -

		Taxiway D: 18 M Surface: Asphalt - Taxiway E: 15 M Surface: Asphalt - Taxiway G: 8 M Surface: Asphalt - Taxiway H: 10 M Surface: Asphalt - Taxiway J: 8 M Surface: Asphalt Taxiway J is 10.5 M then narrows to 8 M after 150 M. Taxiway K: 18 M Surface: Asphalt -
3	Altimeter checkpoint location and elevation	-
4	VOR checkpoints	-
5	INS checkpoints	-
6	Remarks	Reinforced grass apron west of Apron A suitable for aircraft up to 2300 KG MTWA.

EGBJ AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1 and 2 have Self manoeuvring markings. AVGAS helicopter refuelling point and hard standing parking marked with circled 'H'.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 03/21: Runway designation, threshold, centre-line and edge markings. Runway intersections marked. 08/26: Runway designation, threshold, centre-line and edge markings. Runway intersections marked. Taxiway marking aid(s): All taxiways yellow centre-line. See AD 2.20 paragraph 2.
3	Stop bars and runway guard lights (if any)	Runway guard lights at A1, A2, A3, C1, D1, E2 & G1.
4	Other runway protection measures	-
5	Remarks	WDI (LGTD): 515334.78N 0021001.19W, 515330.48N 0020939.52W. Compass swing area marked at Taxiway G. Helicopter parking as directed by ATC and with a marshaller if available.

EGBJ AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGBJ AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	MET OFFICE EXETER
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	MET OFFICE EXETER 9 hours.
4	Trend forecast Interval of issuance	-
5	Briefing/consultation provided	Self briefing/telephone.

6	Flight documentation Language(s) used	Charts abbreviated plain language text. TAFs/METARs. English.
7	Charts and other information available for briefing or consultation	Form 214/215/415 TAF/METAR AIRMET. Internet access.
8	Supplementary equipment available for providing information	-
9	ATS units provided with information	-
10	Additional information (limitation of service, etc.)	Routine observations made at H+20 and H+50 during AD hours. Observations may occasionally be 'Unofficial'.

EGBJ AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) The use of the aerodrome is subject to Airport Terms and Conditions of Use, Byelaws and Code of Practice, copies available from Admin department.
b) PPR mandatory for all flights. Slot booking system in place.
c) All pilots not filing flight plans are required to book-out at Flight Briefing or by telephone to ATC, stating estimated elapsed flight time, fuel endurance and POB. PPR required in addition to a flight plan, including all IAP.
d) Requests for extension to airfield hours are to be made a minimum of 24 hours prior via Briefing.
e) The use of the aerodrome outside published hours is subject to authorisation from Aerodrome Operator.
f) PPE (high visibility jackets) must be worn by all pilots and personnel airside.
g) UAS flight is not permitted unless permission has been granted by Gloucestershire Airport via Air Portal:

https://app.airportal.aero

2 GROUND MOVEMENT

a) Centre-line markings on taxi-lanes within Maintenance Area provide guidance only. Area shared by parked aircraft, uncontrolled authorised vehicles and pedestrians. Licensing and obstacle clearance criteria relating to taxiways not necessarily met. Marshalling assistance available on request.
b) Stands 1 and 2 Self-manoeuvring markings for aircraft with a wingspan up to 24 M. Self-manoeuvring GA parking on western side of Apron A for aircraft with a wingspan up to 15 M. Marshalling assistance available on request.
c) Aircraft commanders are requested to use minimum power settings when manoeuvring on Stands 1 and 2.
d) Helicopter parking on west side of Apron A and on grass spots southwest of Control Tower. Stand 1 not available to helicopters unable to ground taxi. Spot 2 available during operating/daylight hours only and for the use of tower apron rotary only. Outside operating/daylight hours Spot 2 for the use of National Police helicopter only.
e) During Low Visibility Procedures, runway access/egress via A2 or A3 only. All other taxiways closed.
f) Power checks to be completed at holding points. Aircraft should position as close as possible to holding points.

g) Fixed wing aircraft should not taxi within three rotor diameters of rotors running helicopters.
h) During taxiing, pilots should exercise caution when taxiing from apron Alpha towards taxiway Alpha, especially in the vicinity of runway holding points A1, A2 and A3. A left turn should be made to the south of A2 to enter taxiway Alpha when taxiing for either Runway 03 or 08.
i) Due to lack of Pavement Classification Rating information on Taxiways B, C, D, E, G, J and H, aircraft with a MTOW of 5700 KG and above use these taxiways at their discretion. Should alternative taxi routes be required, this request should be made to ATC.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Turbulence may be encountered overflying industrial area on final approach Runway 21 and when crossing airfield perimeter on final Runway 26.
b) Runway 03/21 prone to standing water after prolonged rain. Runway state available from ATC. Runway may not be available for turbine engined departures.
c) Bird activity noted at this airport. Occasionally large flocks of birds may transit across or gather on the aerodrome. Aircraft may be delayed whilst birds are cleared. Despite the presence of fencing, roe deer are occasionally seen on the airport. Pilots are requested to keep a good look out and report any sightings to ATC.
d) A public road runs through the undershoot of Runway 21 and 26. Pilots should not approach below the PAPI glidepath.
e) To avoid possible jet efflux, pilots should avoid overflight of the engine test bed located approx. 300 M B3 Hold.
f) Extensive Instrument training takes place throughout AD hours in IMC and VMC. Pilots intending to transit via GST below 5000 FT AMSL or in the vicinity of IAPs bounded by the co-ordinates: 515156.76N 0023430.78W (KUPET) - 515658.92N 0023005.91W (UVNOP) - 515942.11N 0015429.46W (LAPKU) - 514946.46N 0015243.99W (REKLO) - 514739.45N 0022823.06W (SOSAB), are advised to contact Gloster Approach.
g) Glider and hang glider activity takes place along the Cotswold hills to the east and south of the aerodrome without notification to ATC.
h) Runway 08/26 undulates from its western end for approximately 400 M. From the 08 end, the runway slopes down to a trough at 156 M, then rises to a peak at 264 M with the next trough at 384 M. Overall and local longitudinal slopes are compliant; however, the rate of change of subsequent slope changes exceeds CAP168 requirements by 0.05% & 0.08%.
i) Certain flights may operate outside AD/ATS/ATZ hours, making blind transmissions on 128.555.
j) Public road runs adjacent to eastern airfield perimeter, penetrating Approach surfaces for Runways 21 and 26 and Take-off Climb surfaces for Runways 03 and 08. Co-ordinates relate to that portion of road closest to runway centre-lines, elevations relate to maximum penetration.
k) Pylons and HT cables run from bearing 127°-181° MAG and 214°-275° MAG penetrating inner horizontal surface. Co-ordinates relate to position and elevation of greatest penetration.
l) Road traffic control system in operation, activated by ATC. Mobile obstacle (vehicles) above 2.5 M stopped during non-training precision approaches when visibility less than 5000 M and on request for 08 departures.
m) Microlight flying takes place at Over Farm (515238N 0021657W) approximately 4.3 NM west south west of Gloucestershire Airport. Microlights carry out standard overhead joins, departures and circuits at this location and normally fly up to 1500 FT AGL in the vicinity of Over Farm.
n) Mixed fixed wing and rotary operations can be complex. To avoid the risk of runway incursions all operators need to ensure they are fully aware of procedures, routes and listen carefully to comply with ATC instructions.

5 HELICOPTER OPERATIONS

a) Helicopters communicating with Gloster Air Traffic Control should prefix each transmission of their call sign with the word “Helicopter” e.g. “Helicopter G-AB (or Helicopter AB) downwind”, “Gloster Tower, Helicopter 123B, on the tower apron request start-up”, “Gloster Approach, Helicopter GABCD inbound”.
b) Helicopters capable of doing so should ground taxi rather than air taxi when operating on aprons and in areas where aircraft are parked or holding. Helicopters should ground taxi onto manoeuvring area before lifting. When air taxiing is unavoidable, helicopters should avoid taxiing within three rotor diameters of other aircraft. This distance should be considered as a minimum and should be increased for larger helicopters. Helicopters taxiing in and out of tower apron should ground taxi via holding point K. If skidded, via marked taxi routes from Taxiway A. Spot 7 for the use of tower apron operators only.
c) There are three grass Helicopter Training Areas (Heli Northeast, Heli Northwest and Heli Southwest). An additional aiming point is provided at Heli South to the west of Taxiway J. Helicopter pilots operating in any of the Helicopter Training Areas must exercise extreme caution and remain clear of navigational aids, meteorological equipment and other obstacles as advised by ATC and remain outside of all runway strips.
d) Helicopter circuits operate parallel to and inside fixed wing circuits up to a maximum of 750 FT QFE, approaching and departing from the helicopter training areas as follows:

Fixed-wing	Rotary
Runway 08/26	Heli Northwest & Northeast
Runway 03/21	Heli Southwest & Northwest

i. Helicopters may also be instructed to depart or approach to Runways. Arrivals from the south will normally approach to Heli South. To avoid runway incursions helicopter operators when taxiing and needing to cross any runway must take special care in listening and complying with ATC Instructions.
ii. Heli Northwest and Heli Northeast are referred to generically as 'Heli North'. Approach Control will normally issue joining instructions to 'Heli North', Tower may then specify a particular training/landing area, subject to traffic and/or runway in use.

e) In order to reduce RT loading and avoid conflict between rotary and fixed-wing circuits, standardised phraseology and procedures are established for helicopter operations. The standardised phrases are assigned the following meanings:

i. **'Standard Helicopter Departure North'**: Lift and remain clear of fixed-wing active runways. After lifting, depart the ATZ promptly to the north not above height 750 FT QFE (subject to runway crossing clearance if required and remaining clear of fixed wing final approach and climb out). Please note that fixed wing and helicopter circuits may be active and opposite direction helicopter traffic may be joining. Any requirements to deviate from this standard departure must be advised to ATC.
ii. **'Standard Helicopter Departure South'**: Lift and remain clear of fixed-wing active runways. After lifting, depart the ATZ promptly to the south/southwest not above height 750 FT QFE (subject to runway crossing clearance if required and remaining clear of fixed wing final approach and climb out). Please note that fixed wing and helicopter circuits may be active and opposite direction helicopter traffic may be joining. Any requirements to deviate from this standard departure must be advised to ATC.
iii. **'Standard Helicopter Arrival North'**: Enter the ATZ from the north not above 750 FT QFE towards Heli North, remaining clear of fixed wing final approach and climb out tracks. Please note that fixed wing and helicopter circuits may be active and opposite direction helicopter traffic may be departing. Any requirements to deviate from this standard arrival must be advised to ATC.
iv. **'Standard Helicopter Arrival South'**: Enter the ATZ from the south/southwest not above 750 FT QFE towards Heli South or Heli Southwest (as directed), remaining clear of fixed wing final approach and climb outtracks. Please note that fixed wing and helicopter circuits may be active and opposite direction helicopter traffic may be departing. Any requirements to deviate from this standard arrival must be advised to ATC.
v. **'Standard Helicopter Circuits'**: Lift and remain clear of fixed wing active runways. Fly circuits not above height 750 FT QFE in same direction as notified fixed wing circuit. Circuits to depart from and arrive at the most upwind available heli-spot. When downwind helicopters shall report their position (e.g. "Helicopter-AA downwind"). Each time a helicopter lifts (including lifting each time into circuit) they shall report lifting (e.g. "Helicopter-AA lifting"). These broadcasts may not be acknowledged by ATC. Helicopters to maintain a listening watch on ADC frequency as traffic information and instructions may frequently be given. Helicopters to advise ATC when circuit detail is complete.

f) Larger helicopters and those types able to ground taxi may be integrated into the fixed-wing circuit.
g) Helicopters are required to comply with noise abatement procedures as detailed in AD 2.21.
h) Helicopters requiring AVGAS are required to alight at the circled 'H' west of the refuelling point. Ground handling or repositioning may be required for parking. At no time shall student pilots maintain control of a helicopter when in the vicinity of the fuel pumps. Control shall be taken by Instructors when routing to, from or in the vicinity of the fuel pumps.
i) Helicopters requiring to cross Runway 03/21 and 08/26 will be instructed to air taxi to Hold Y or X to await onward clearance. Cross at right angles to the centre-line.
j) Runway Strips and ILS critical areas marked by mown grass. Helicopters must not infringe runway strips during approach or manoeuvring without ATC clearance.
k) Jet A1 refuel normally takes place at ‘Spot 5’. Access to and egress from Spot 2 should be via the quadrant delineated by the white markers. Similarly, when fixed wing aircraft are at the AVGAS pumps or Hold A2, access and egress from Spot 5 should be via the mown quadrants only, which requires a positive Runway 08/26 entry and associated ATC clearances.

6 USE OF RUNWAYS

a) Crossing/multiple runway operations may take place. To avoid runway incursions pilots must follow ATC taxi instructions and vacate all runways as expeditiously as possible.
b) Due to lack of Pavement Classification Rating information, aircraft with a MTOW above 5700 KG are not permitted to operate from Runway 04/22.

7 TRAINING

a) PPR and slot required for all instrument training flights and non-training.
b) An Instrument 'slot' booking system operates throughout AD hours. In order to avoid delay or curtailment, pilots should adhere to their pre-booked times. ATC are to be advised of any cancellation.
c) Engine failure after take-off training not permitted for SEP (single engine piston) on Runway 21 or Runway 26. EFATO exercises from Runways 03 and 08 must only commence after passing M5 motorway.

EGBJ AD 2.21 NOISE ABATEMENT PROCEDURES

Operators of all aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in the areas surrounding the aerodrome. A medium density residential conurbation is situated to the east, south and southwest of the aerodrome. Whenever possible, pilots should avoid overflight of these areas, other villages, hamlets and residential areas in the vicinity of the aerodrome. The following procedures may be departed from only to the extent necessary for avoiding immediate danger and for complying with ATC instructions.

a) Jet departures Runway 08 - Climb straight ahead through 1400 FT QNH before turning.
b) Departures Runway 21 - No left turns permitted until passing Chosen Hill (1.2 DME).
c) Departures Runway 26 - Non-jet aircraft (including circuit aircraft) are not to execute rights turns until passing west of the golf course (0.5 DME (26)) and should not route over the village of Down Hatherley. Jet aircraft are to climb straight ahead through 1400 FT QNH before executing any turn.
d) Departures Runway 03 - No left turns before Staverton Village (1.1 DME).

EGBJ AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR INBOUND AIRCRAFT

a) **IFR Arrivals**: PPR and slot required for all flights and in addition to the filing of a flight plan. Arriving flights are to establish communications with ATC at least 10 minutes prior to ETA at NDB(L) GST.
b) **VFR Arrivals**: Arriving VFR flights are to establish communications with ATC at least 5 minutes prior to ETA for overhead and at not less than 5 DME. Fixed wing aircraft will normally be instructed to make a Direct Join. Direct joins may be issued with a vertical restriction e.g. not below 1500 FT QFE, to facilitate circuit integration. Such a restriction does not absolve pilots from the requirement to remain in VMC at all times. Inbound flights should avoid Instrument Approach let-down areas and departure climb-outs at all times.

2 PROCEDURES FOR OUTBOUND AIRCRAFT

a) To provide improved ATC handling of outbound flights via the ATS Route network from Gloucestershire Airport, the following Standard Departure Routes have been established in conjunction with relevant agencies. Full details published in Standard Route Document. Non-compliant FPL may be changed to the routes shown in the table below.

Departure to	Via	Route	Remarks
East	L607	BADIM - DCT - BUCFA - L607	Departures will normally be transferred to 'Bristol Radar' once deconflicted from known traffic.
South/Southwest	N92	BCN - DCT - EXMOR - N92	Departures will normally be transferred to 'Cardiff Radar' once deconflicted from known traffic.
West	L9	BCN - P4 - FELCA - L9	Departures will normally be transferred to 'Cardiff Radar' once deconflicted from known traffic.
Northwest	N864	KISWO - N864	Departures will normally be transferred to 'Western Radar' once deconflicted from known traffic.
North	P18	TELBA	Departures will normally be transferred to 'Western Radar' once deconflicted from known traffic.

b) Aircraft carrying out IR Training and Examination flights at Bristol, Cardiff and Exeter are required to route BADIM - DCT - ICCIN.
c) Upon first contact with ATC, pilots should acknowledge receipt of current ATIS code and state altimeter setting in use.
d) All IFR departures joining controlled airspace must request start up clearance.
e) After departure, all turns will conform with the direction of the circuit for the departure runway (promulgated on ATIS) unless approval from ATC has been granted.

3 CIRCUIT PROCEDURES

a) Fixed-wing circuit height 1000 FT QFE. Rotary circuit height not above 750 FT QFE. Runway 03 and 08 LH circuit, Runway 21 and 26 RH circuit. Direction may be varied by ATC.
b) On occasion fixed wing aircraft may be cleared for a "bad weather circuit" and this will be flown not below 600 FT QFE.

4 INSTRUMENT APPROACHES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.
b) Undulation of the glide path will occur beyond 6 NM. Auto coupled approaches should not be carried out before 6 NM.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL **1210**
ELEVATIONS IN FEET AGL (540)

GLOUCESTERSHIRE

MINIMUM INITIAL ALTITUDE
Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2100** in the sector defined by the lateral limits; 520137N 0020620W - 514540N 0021339W - 514540N 0021816W thence clockwise by an arc of a circle radius 8NM centred on 515340N 0021805W to 515705N 0022946W - 520139N 0021527W - 520137N 0020620W.
b) **2200** in the sector defined by the lateral limits; 520139N 0021527W - 515705N 0022946W thence clockwise by an arc of a circle radius 8NM centred on 515340N 0021805W to 520139N 0021754W - 520139N 0021527W.
c) **2300** in the sector defined by the lateral limits; 520137N 0020620W - 520138N 0020123W thence clockwise by an arc of a circle radius 8NM centred on 515339N 0020158W to 514541N 0020044W - 514540N 0021339W - 520137N 0020620W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2800**, or last assigned level if higher to **NDB(L) GST†**.
Intermediate and Final Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) GST†**.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of **NDB(L) GST**.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**

EGJB — GUERNSEY

EGJB AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGJB — GUERNSEY

EGJB AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 492606N Long: 0023610W Midpoint of Runway 09/27.
2	Direction and distance from city	2.5 NM WSW of St Peter Port.
3	Elevation / Reference temperature / Mean Low Temperature	336 FT / 18 °C / -
4	Geoid undulation at AD ELEV PSN	161 FT
5	Magnetic Variation / Annual Change	0.69°E (2027) / 0.17°E
6	AD Administration Address Telephone E-mail address	GUERNSEY PORTS Guernsey Airport, Forest, Guernsey, GY8 0DS, Channel Islands. 01481-227766 (General) airport@gov.gg
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGJB AD 2.3 OPERATIONAL HOURS

1	AD Administration	0630-2100 (0530-2000).
2	Customs and immigration	As AD hours.
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	As AD hours.
6	MET Briefing Office	H24
7	ATS	As AD hours. See also AD 2.18.
8	Fuelling	0615-2000 (0515-1900). Outside these hours by arrangement.
9	Handling	As AD hours.
10	Security	As AD hours.
11	De-icing	As AD hours.
12	Remarks	AD use subject to restriction – refer to AD 2.20 item 1, item 2 and to AD 2.21

EGJB AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Bulk and ULD handling. Cargo security screening. Guernsey Freight Services Limited Tel: 01481-237424.
2	Fuel and oil types	AVTUR JET A-1, (anti-icing additive not permitted to be added during refuelling), AVGAS 100LL Aeroshell 100, W100, W100 plus, W80, W80 plus & 15W50.
3	Fuelling facilities/capacity	AVTUR 1200 lts per minute. AVGAS 450 lts per minute. De-fuelling facility not available.
4	De-icing facilities	Type 1 and 2 fluids available (subject to serviceability). De-icing is available as part of a cold pool. For membership and costs please contact Aurigny Air Services, Tel: 01481-822889.
5	Hangar space for visiting aircraft	Limited. By prior arrangement only with Aiglle Flight Support Ltd, ASG Flight Support Ltd or Aurigny Air Services Ltd.
6	Repair facilities for visiting aircraft	Aurigny Air Services Ltd, Tel: 01481-268870. Aircraft Servicing Guernsey Ltd, Tel: 01481-265750.

7	Remarks	Handling agents are: Aiglle Flight Support Tel: 01481-239544; Fax: 01481-235008; e-mail: ops@aiglle.com (General and Executive Aviation) Maximum size of aircraft handled - Bombardier Global 7500 (GL7T). Guernsey Freight Services Tel: 01481-237424; (Commercial Freight). ASG Flight Support Ltd Tel: 01481-263965; e-mail: flightsupport@flyasg.co.uk (General and Executive Aviation) Maximum size of aircraft handled - Bombardier Global 7500 (GL7T). Aurigny Air Services Tel: 01481-822889; e-mail: ops@aurigny.com (Commercial Passenger) Maximum size of aircraft handled - Boeing 737-800/Airbus A320.

EGJB AD 2.5 PASSENGER FACILITIES

1	Hotels	In the vicinity of the aerodrome.
2	Restaurants	Café, Bar and Conference facilities within terminal building.
3	Transportation	Public bus services and taxis.
4	Medical facilities	Limited first aid treatment available via RFFS.
5	Bank and Post Office	Post box situated outside of terminal building. Cash point in Terminal.
6	Tourist Office	Information desk in Terminal.
7	Remarks	-

EGJB AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A5 RFF Category 6 accepted under remission. RFF Category 7 available on request with a minimum of 24 hours notice to Guernsey Airport. Telephone: 01481-227766.
2	Rescue equipment	4x Major Foam Tenders. 3 x 6x6 vehicles and 1 4x4. Spreaders, Cutters, Rescue Ram and Ripper gun, power saws, forcing bags, sealing bag.
3	Capability for removal of disabled aircraft	Aircraft lifting capability is available through mobile crane with a maximum of 50 tonne lifting capability. Contact Guernsey Airport: 01481-227766.
4	Remarks	Two locally based aero engineering facilities to assist in light aircraft recovery.

EGJB AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical. Chemical de-icing.
2	Clearance priorities	Runway 09/27, Taxiway Alpha, Delta, Charlie and Apron areas.
3	Remarks	Latest information from: 01481-227766. Guernsey Airport's policy on clearing a contaminated runway will always be to clear back to a blacktop. Braking action readings will not be provided. Global reporting format (GRF) reports will be provided.

EGJB AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	APRON Surface: Concrete Stands: 1-8 PCR:485/R/C/W/U Stands: 9-10 PCR:285/R/C/W/U Stands: 21-23 PCR:285/R/C/W/U WEST APRON Surface: Asphalt PCR 171/F/C/W/U

2	Taxiway width, surface and strength	Taxiway A: 18 M Surface: Asphalt PCR 400/F/C/W/U Taxiway B: 18 M Surface: Asphalt PCR 400/F/C/W/U Taxiway C: 18 M Surface: Asphalt PCR 400/F/C/W/U Taxiway D: 18 M Surface: Asphalt PCR 400/F/C/W/U Taxiway E: 18 M Surface: Asphalt PCR 238/F/C/W/U Taxiway F: 18 M Surface: Concrete and asphalt PCR 135/R/C/W/U
3	Altimeter checkpoint location and elevation	-
4	VOR checkpoints	492600.31N 0023527.70W Position: Ground
5	INS checkpoints	See Aircraft Parking/Docking Chart
6	Remarks	-

EGJB AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1-8 (Main Apron) and Stands 21-23 (West Apron) are nose-in push back stands with stand designator signs and a yellow centre-line. All have a painted ground stop line. Stands 2A and 3A are positioned behind Stands 2 and 3 and delineated by a stand demarcation line. Use of these stands are restricted to short turnarounds only. Self-manoeuvring markings are provided on Stands 9-10 and 12-15 (East Apron). Marshalling guidance for nose-in push back stands is provided by approved handling agents. Aircraft will not enter a stand until the marshaller is present, in position and ready to receive the aircraft. Aircraft will then follow the marshallers instructions. Into-wind markings are provided on Stands 2-8 and are in a east/west configuration. Use of these stands are restricted to ATR72 sized aircraft or smaller and manoeuvres are strictly managed via marshallers.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 09/27: Runway designation, runway threshold, runway centre-line, fixed distance, touchdown zone, runway edge. Runway light(s): Runway designation, runway threshold, runway centre-line, fixed distance, touchdown zone, runway edge. Taxiway marking aid(s): Taxiway centre-line and line holding positions. Reflective markers on taxiway edge. Taxiway light(s): Taxiway entrance to runway indicated by alternate green/amber centre-line lights. Taxiway centre-line and line holding positions. Blue elevated taxiway-edge lights.
3	Stop bars and runway guard lights (if any)	Enhanced LED stop bars at runway holding points A1, B1, C, D1.LED stop bars at A2, A3, A4, B2, D2 and D3.Guernsey Airport operates a 'ring of red' policy, and runway holding point stop bars are in permanent operation.
4	Other runway protection measures	-
5	Remarks	WDI: 492608.91N 0023633.79W (LGTD), 492610.04N 0023551.78W (LGTD), adjacent to Runways 09 and 27 Glidepath aerials. All obstacles marked and lit.

EGJB AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGJB AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	JERSEY MET
2	Hours of service MET Office outside hour	H24 -

EGJB AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Channel Islands CTR.
b) All aircraft using Guernsey Airport and its facilities must comply with the requirements of the United Kingdom Civil Aviation (Insurance) Regulations 2005 and any future published amendments to these Regulations.
c) The use of the aerodrome is subject to 'Airport Terms and Conditions of Use'. These are available from Airport Administration (01481-227766) or on the Airport website (**www.airport.gg/airport-business/terms-conditions**).
d) In IMC, flight to Guernsey by aircraft not equipped with VOR will be by prior permission only.
e) The Director of Civil Aviation for the Bailiwick of Guernsey has issued Exemptions from the Air Navigation (Bailiwick of Guernsey) Law 2012 authorising operations in Bailiwick of Guernsey airspace including Guernsey and Alderney Airports, by home-built aircraft registered in ECAC Member States, and non-home-built aircraft registered in the UK, Ireland and France, operating on a National airworthiness certificate. (Separate exemptions extend the effect to Jersey Airport and Jersey Airspace.) Note that the exemptions do not exempt the pilot or operator from obtaining permission from Jersey ATC for flight in the Channel Islands Control Zone, from Guernsey ATC for flight in Guernsey airspace and use of Guernsey and Alderney Airports, or from the requirement to carry a transponder whilst flying within the Channel Islands Control Zone.
f) Guernsey airport conforms to the United Kingdom National Aviation Security Programme. A means of identification will be necessary for all aircrew and private aircraft passengers to gain access to aircraft, stands and parking areas.
g) The carriage of carrying dangerous or hazardous cargo is subject to a ‘permission granted’ under the Air Navigation (Bailiwick of Guernsey) Law 2012.
h) All aircrew whilst airside, are required to wear high visibility clothing at all times. Aircrew wearing high visibility clothing must escort passengers (not wearing high visibility clothing) to and from their aircraft. Pilots in charge of aircraft are responsible for ensuring that their crew and passengers comply with these requirements.
i) There is no access to the terminal building for crews and passengers of private and General Aviation flights unless the services of a handling agent are employed.
j) All commercial and general aviation aircraft using Guernsey Airport are required to use the services of a handling agent (see AD 2.4).
k) General Aviation aircraft intending to visit Guernsey must contact either Aircraft Servicing Guernsey or Aiglle Flight Support prior to arrival to arrange parking, customs and immigration. Contact details in EGJB AD 2.4 Handling Services and Facilities.
l) In respect of Aerodrome Operating Minima, the notified method of calculating Aerodrome Operating Minima for the purposes of the Air Navigation (Bailiwick of Guernsey) Law 2012 shall be that published in the UK AIP, Section AD 1.1 subsection 4, Aerodrome Operating Minima.
m) Applications for civilian formation flights in Special VFR within the CI Control Zone should ideally be made in writing or by e-mail to Jersey ATC Operations (atc.ops@jerseyairport.com) ideally with a minimum of seven days notice. Short notice application may be made to the Jersey ATC Watch Manager, Tel: +44 (0)1534-446086.

2 GROUND MOVEMENT

a) Commercial passenger aircraft will predominantly utilise stands 1 to 8, which are configured for nose-in push back operations. Guernsey Airport has authorised some approved smaller aircraft to self-manoeuvre onto and off these stands. Details are provided within the Aerodrome Manual. AC Fixed Electrical Ground Power is available on Stands 2, 3, 4 and 5. AC and DC Fixed Electrical Ground Power is available on Stands 1, 2, 3, 4, 5, 6, 7 and 8.
b) The apron configuration is shown at page AD 2-EGJB-2-2.
c) Aircraft proceeding from and to the East Apron or Aiglle Flight Support must exercise caution when transiting the A hold complex due to the potential for an incursion onto Runway 27. EGJB HS1 refers.
d) Guernsey Airport operates a 'ring of red' policy, with runway holding point stop bars in permanent operation. Pilots are reminded that they must not cross an illuminated red stop bar unless specifically authorised by ATC.

3 CAT II/III OPERATIONS

a) Arrivals: CAT II/III operations are not applicable.

i. When Low Visibility Procedures are notified as in force by ATIS or RTF, pilots should, unless otherwise instructed by ATC, vacate the runway only at the runway ends and report vacated after passing the yellow/green section of taxiway lighting.

4 WARNINGS

a) Pilots are to note that flight is not permitted at a height of less than 2000 FT above ground level within 3 NM of 492546N 0022145W on the Island of Sark (R095) except with the permission of the Channel Islands Director of Civil Aviation or from Guernsey ATC as necessary.
b) The firing at Fort Le Marchant small arms range (493031N 0023105W), takes place seaward within sectors 347°T to 069°T, radius 3000 M.
c) Model Aircraft Flying may take place on any day of the year, during daylight hours, at Chouet headland (493021N 0023247W) up to 400 FT AMSL.
d) After periods of prolonged rainfall, isolated areas adjacent to the paved surfaces may become waterlogged and incapable of bearing weight.
e) Down draught or turbulence may be experienced on approaches to either runway in strong winds from any direction due to cliffs and valleys in local terrain.
f) When landing on Runway 27 in strong south east to south west winds, building induced turbulence and windshear conditions may be experienced.
g) There are no ground signals other than light signals, the chequered flag and the letter 'C' indicating the point to which pilots are required to report.
h) Due to coastal location, birds are a hazard throughout most of the year. This hazard level is raised during the migration season.
i) Taxiway D has a 2.5% slope between Holding Point A4 and Taxiway C.
j) Between D1 and D2 the taxiway to runway centre-line distance reduces to 123 M.
k) When LVPs are not in force, maintenance and birdscaring vehicles may operate inside the 140 M runway strip but outside the 105 M clear and graded area.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Light aircraft are to land and take-off on the paved runway. No other light aircraft landing area is available.

7 TRAINING

a) All instrument and circuit training must be booked in advance with Guernsey ATC (call 01481-227766 and ask for ATC Supervisor). A request for training in Item 18 of a FPL will not be accepted as a booking or allocated a training slot.

EGJB AD 2.21 NOISE ABATEMENT PROCEDURES

All aircraft must conform to the following procedures. These procedures may only be departed from to the extent necessary for avoiding immediate danger.

a) Every operator using the airport shall ensure that at all times aircraft are operated in a manner calculated to cause the least disturbance practicable over all parts of the island.
b) Unless ATC otherwise authorise, the Noise Preferential Routings and Procedures specified below shall apply to all aircraft approaching, landing, 'going around' or taking-off in accordance with their ATC clearance.

    i. All departing aircraft weighing 5,700 kg or more will climb straight ahead to at least 1836 FT QNH (1500 FT QFE), or 3 DME, whichever is the sooner, before turning on course.
    ii. Non-SID IFR, VFR or Special VFR departures weighing less than 5,700 kg must climb straight ahead until at least 850 FT AMSL before turning. This also applies to circuit traffic.

c) Visual Approaches – Aircraft to carry out visual approaches should proceed as follows:

    i. MTOW 5700 kg or less – join the final approach at not less than, and maintain, 836 (500) FT until intercepting the on glidepath PAPI indications
    ii. MTOW greater than 5700 kg – join the final approach before crossing the coastline. Any aircraft overflying the Island to position on final approach must do so at an altitude of not less than 1500 FT AMSL.

d) Circuit Joining and Training Height – Standard circuit height is 700 FT AAL.
e) Jet Aircraft Procedures – The Noise Preferential Routings and Procedures specified above will be used except that on 'going around', aircraft operating under IFR will, unless otherwise instructed, carry out the published missed approach procedure. Aircraft operating under VFR/SVFR will carry out a missed approach procedure as instructed by Air Traffic Control.
f) Training flights by approved ‘quiet’ jet aircraft may be permitted between 0800-2000 (0700-1900) Monday to Saturday inclusive (details from ATC).
g) All aircraft are to avoid overflying the Princess Elizabeth Hospital (2 NM ENE of the aerodrome) at less than 1000 FT AGL.
h) Chapter 2 aircraft are not permitted to use Guernsey Airport unless the operator has received special permission from Guernsey Airport.
i) Limitations of the use of Aircraft Auxiliary Power Units (APUs)

    Pilots and engineers should limit the use of APUs whilst operating at Guernsey Airport. The following restrictions of use are in place:

    i. All departing aircraft shall not start the APU more than 45 minutes before the scheduled off-block time (SOBT).

ii. All arriving aircraft, the APU shall be shut down within 10 minutes of arrival.
iii. During periods where the outside air temperature is below 5°C or above 25°C, the APU restriction for departing aircraft can be extended to 60 minutes before SOBT.
iv. Where any fixed or mobile ground power units are not capable of providing sufficient or the correct power, the APU shall not be started more than 45 minutes before SOBT.
v. Any APU operation outside of the policy must receive explicit permission from Guernsey Airport.

EGJB AD 2.22 FLIGHT PROCEDURES

1 INBOUND PROCEDURES

a) Arrival routes at AD 2-EGJB-7-1 may be varied at the discretion of ATC.

2 VFR FLIGHT

a) A flight plan must be filed for all flights within and intending to transit the Channel Islands CTR.
b) VFR clearance to operate within the Guernsey ATZ will not be granted if the reported visibility is less than 5 KM or the reported cloud ceiling is less than 1500 FT in accordance with SERA.5001.
c) Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
d) Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5001. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
e) VFR Flights may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

3 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

4 SPECIAL VFR FLIGHT

a) Prior Permission

i. A flight plan must be filed for all Special VFR flights within and intending to transit the Channel Islands CTR.
ii. Special VFR clearances for flights within the Channel Islands CTR may be requested and will be given whenever traffic conditions permit. Special VFR flights within the Guernsey ATZ will be subject to the general conditions laid down for Special VFR flights in SERA.5010. Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
iii. Special VFR clearances for flights within the Channel Islands CTR may be requested and will be given whenever traffic conditions permit. These flights are subject to the general conditions laid down for Special VFR Flights.
iv. The use of Special VFR clearances is intended to be limited to light aircraft which cannot comply with full IFR requirements and wish to proceed to or from an aerodrome within or to transit the Channel Islands CTR.

b) Special Routes

i. Aircraft operating in accordance with Special VFR will normally be cleared via the published VRPs or on tracks to/from adjacent aerodromes or navigation aids, or as per flight planned route.
ii. Special VFR may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

c) Weather Minima

i. Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5010. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
ii. Special VFR clearances to operate within the Guernsey ATZ will not be granted to a fixed wing aircraft if the reported visibility is less than 1500 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iii. Special VFR clearances to operate within the Guernsey ATZ will not be granted to a helicopter if the reported visibility is less than 800 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iv. The Director of Civil Aviation has approved the issue of Special VFR clearances at night.

5 SARK RESTRICTED AREA

a) Pilots are to note that flight is not permitted at a height of less than 2000 FT above ground level within 3 NM of 492546N 0022145W on the Island of Sark (R095) except with the permission of the Channel Islands Director of Civil Aviation or from Guernsey ATC as necessary.

6 RADIO COMMUNICATION FAILURE PROCEDURES

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1.
b) Radio Failure in the circuit

i. The pilot of an aircraft in the circuit experiencing radio failure should set the transponder code to 7600, and make one orbit away from the airfield. At the end of the downwind leg, proceed to final and land, providing the runway is clear.
ii. The pilot of an aircraft on base leg or final, having been cleared to final when the failure occurs, should, if time permits, change code to 7600, continue the approach and land, providing the Runway is clear.
iii. The pilot of a non transponder equipped aircraft should adopt the same procedure as in i), or ii).

7 FLIGHT PLANS

a) See ENR 1.11.

8 OMNI-DIRECTIONAL DEPARTURES

a) Only available with ATC clearance.

Omni-directional Departures		
Runway	**Description**	**Restrictions**
09	Climb straight ahead on track 089°M to 850 QNH (514 QFE), then turn on track climbing to enroute safety altitude or in accordance with ATC Clearance. PDG 3.3%.	Close-in obstacles exist. See Aerodrome Obstacle Chart and EGJB AD 2.10 Aerodrome Obstacles. This procedure does not take account of noise abatement procedures which may require climb to a higher level. See EGJB AD 2.21 for Noise Abatement Procedures.
27	Climb straight ahead on track 269°M to 850 QNH (514 QFE), then turn on track climbing to enroute safety altitude or in accordance with ATC clearance. PDG 3.3%.	Close-in obstacles exist. See Aerodrome Obstacle Chart and EGJB AD 2.10 Aerodrome Obstacles. This procedure does not take account of noise abatement procedures which may require climb to a higher level. See EGJB AD 2.21 for Noise Abatement Procedures.

9 CARRIAGE AND OPERATION OF SSR TRANSPONDERS

a) The carriage and operation of SSR transponder equipment with the following capability is mandatory when flying within the Channel Islands CTR, CTA or TMA:

i. when operating as a VFR or Special VFR Flight;
ii. when operating under IFR - Mode A 4096 codes and Mode C with altitude reporting capability.

b) Exemptions from the requirements may be given in the following circumstances:

i. for notified agreed events such as air rallies etc., applications for exemption must be made in writing to Manager - Air Traffic Control, Jersey Airport, Channel Islands, Email: atc@jerseyairport.com at least one calendar month before the event;
ii. for short notice exemptions, applications must be made to the Watch Supervisor, Jersey Airport, Tel: 01534-446086 giving full details. Such exemptions will not normally be granted unless it is considered that exceptional circumstances exist.

EGJB AD 2.23 ADDITIONAL INFORMATION

a) Guernsey Approach and Guernsey Tower may be provided as a combined function. Periods when active will be notified by ATIS.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 812
ELEVATIONS IN FEET AGL (464)

GUERNSEY

MINIMUM INITIAL ALTITUDE
Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is **1500** in the sector defined by the lateral limits; 493129N 0025341W - 494705N 0022941W thence clockwise by an arc of a circle radius 8NM centred on 494125N 0022058W to 494919N 0022301W - 495113N 0020710W thence clockwise by an arc of a circle radius 8NM centred on 494320N 0020510W to 494850N 0015613W - 494401N 0020000W - 493607N 0020000W - 492038N 0022007W thence clockwise by an arc of a circle radius 8NM centred on 492618N 0022846W to 491818N 0022821W - 491751N 0024431W thence clockwise by an arc of a circle radius 8NM centred on 492551N 0024458W to 493129N 0025341W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:
a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.
*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **GUR VOR**†.
Intermediate and Final Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **GUR VOR**†.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **LF D18 A5** SFC-FL95, except for within CHANNEL ISLANDS CTA-1 (South) and TMA (South) when active.
7. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**

EGNR — HAWARDEN

EGNR AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 531041N Long: 0025840W Centre of Runway 04/22
2	Direction and distance from city	3.5 NM WSW of Chester.
3	Elevation / Reference temperature / Mean Low Temperature	45 FT / 18 °C / -
4	Geoid undulation at AD ELEV PSN	173 FT
5	Magnetic Variation / Annual Change	0.22°E (2027) / 0.19°E
6	AD Administration Address Telephone Telefax E-mail address	AIRBUS OPERATIONS LTD. Hawarden Airport, Broughton, Chester, N Wales, CH4 0DR. 01244-522012 (ATC) 01244-523035 atcopshawarden@airbus.com
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	All calls to ATC will be recorded.

EGNR AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Fri 0800-2100 (0700-2000); Sat, Sun & PH 0830-1800 (0730-1700).
2	Customs and immigration	By arrangement. PPR 24 hours
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	As AD hours. See also AD 2.18.
8	Fuelling	As AD hours. By prior arrangement.
9	Handling	As AD hours. By prior arrangement.
10	Security	As AD hours. By prior arrangement.
11	De-icing	As AD hours. By prior arrangement.
12	Remarks	This aerodrome is PPR. Additional activity outside published hours by NOTAM.

EGNR AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	-
2	Fuel and oil types	AVTUR JET A-1, SAF (Sustainable Aviation Fuel) and AVGAS 100LL.
3	Fuelling facilities/capacity	AVGAS: Fixed pump. AVTUR: Bowser (pressure and overwing).
4	De-icing facilities	Mobile rig by prior arrangement.
5	Hangar space for visiting aircraft	On Apron N, limited for light aircraft (by prior arrangement).
6	Repair facilities for visiting aircraft	Repair facilities for visiting aircraft limited to light aircraft on Apron N and C by prior arrangement.
7	Remarks	-

EGNR AD 2.5 PASSENGER FACILITIES

1	Hotels	In the vicinity.
2	Restaurants	Diner on Aerodrome.
3	Transportation	Taxis, trains.
4	Medical facilities	Limited first aid on site.
5	Bank and Post Office	Broughton village.
6	Tourist Office	Chester.

7	Remarks	-

EGNR AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 Aircraft greater than Category A7 require specific approval to operate at the airport, Tel: +44 (0)1244-522012.
2	Rescue equipment	2x Panther fire tenders (12,000 LT water/1500 LT foam each) 1x Rosenbauer Buffalo fire tenders (10,000 LT water/1200 LT foam).
3	Capability for removal of disabled aircraft	Contact Fire Control Room on 01244-522371. Aircraft 150 tonnes (if aircraft can be rolled) with prior approval from accountable manager.
4	Remarks	-

EGNR AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical. Chemical de-icing. Esseco liquid de-icer Safegrip Plus (KAC) and solid de-icer Safegrip SF(KAC).
2	Clearance priorities	Runway 04/22; Beluga Apron and Taxiways B and E; Apron A and Taxiway A; Apron C and Taxiway C; Apron N and Taxiway N; Taxiways D, J and G.
3	Remarks	Latest information available from ATC. Tel: 01244-522012.

EGNR AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	A Surface: Concrete PCR 273/R/D/Y/U BELUGA APRON Surface: Concrete PCR 875/R/D/X/U C Surface: Asphalt PCR 273/F/D/Y/U D Surface: Asphalt PCR 273/F/D/Y/U N Surface: Asphalt PCR 273/F/D/Y/U
2	Taxiway width, surface and strength	Taxiway ALPHA: 25 M Surface: Asphalt PCR 273/F/D/Y/U Width: 25 M between runway and Taxiway D intersection; 15 M between Taxiway D intersection and Apron A. Taxiway BRAVO: 25 M Surface: Asphalt PCR 875/R/D/X/U Taxiway CHARLIE: 15 M Surface: Asphalt PCR 273/F/D/Y/U Taxiway DELTA: 15 M Surface: Asphalt PCR 273/F/D/Y/U Taxiway ECHO: 23 M Surface: Concrete and asphalt PCR 875/R/D/X/U

		Taxiway GOLF: 18 M Surface: Asphalt PCR 273/F/D/Y/U Taxiway JULIET: 10.5 M Surface: Asphalt PCR 325/F/D/Y/U Taxiway NOVEMBER: 15 M Surface: Asphalt PCR 273/F/D/Y/U
3	Altimeter checkpoint location and elevation	-
4	VOR checkpoints	-
5	INS checkpoints	-
6	Remarks	-

EGNR AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	-
2	Runway and taxiway markings and lighting	Runway marking aid(s): 04/22: Designators 04/22. Permanently displaced thresholds. TDZ and fixed distance markers. Blue edge markers on runway turning circles. Taxiway light(s): Taxiway J is not lit, but has retro reflective lin-laner markers.
3	Stop bars and runway guard lights (if any)	Stop Bars at Hold points A1, B1, C1, D1, E1, G1 and N1. Runway guard lights at Hold points A1, B1, C1, D1, E1, G1 and N1.
4	Other runway protection measures	-
5	Remarks	Taxiways G and J are unlit and not available for use at night. WDIs (LGTD): 531030.01N 0025908.18W; 531059.37N 0025829.30W.

EGNR AD 2.19 RADIO NAVIGATION AND LANDING AIDS

Type of Aid CAT of ILS/MLS MAG Var/VOR Declination	Ident	Frequency	Hours of Operation	Position of transmitting antenna coordinates	Elevation of DME transmitting antenna	Remarks
1	2	3	4	5	6	7
ILS/LOC I 0.22°E (2027)	IHWD	110.350 MHz	HO	531043.61N 0025844.66W	-	(RWY 04) ILS is offset 2.6° to the right. Due to terrain considerations, below 3500 FT, the LOC and associated DME are restricted to operations within +-35 to a range of 10 NM and +-10 out to a range of 18 NM. Above 3500 FT the LOC and associated DME is usable to 35 degrees either side of centreline from 17 NM.
ILS/GP	IHWD	334.850 MHz	HO	531032.83N 0025902.39W	-	3.5° ILS Ref Datum Hgt 42 FT.
ILS/LOC I 0.22°E (2027)	IHDN	110.350 MHz	HO	531011.58N 0025922.44W	-	(RWY 22) LOC off-course clearance: It should be noted that false capture may occur in the sector 26 to 30 left of centre-line with certain types of aircraft navigation receiver. 22 ILS has an infringement of the transitional surface by hangar ENE of the runway threshold.
ILS/GP	IHDN	334.850 MHz	HO	531054.58N 0025830.94W	-	3° ILS Ref Datum Hgt 52 FT.
DME	IHWD	40Y 110.350 MHz	HO	531033.11N 0025902.47W	42 FT	(RWY 04) On AD. Freq paired with ILS I-HWD. Zero range to THR of Runway 04. Due to terrain effects DME unusable below 4500 FT in sector 240 to 270 MAG, in excess of 15 NM.
DME	IHDN	40Y 110.350 MHz	HO	531054.84N 0025831.79W	32 FT	(RWY 22) On AD. Freq paired with ILS I-HDN. Zero range to THR of Runway 22. Due to terrain effects DME unusable below 4500 FT in sector 240 to 270 MAG, in excess of 15 NM.
NDB (L) 0.22°E (2027)	HAW	340.000 kHz	HO	531045.00N 0025846.35W	-	On AD. Range 25 NM.

EGNR AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Not available to non-radio equipped aircraft.
b) High visibility clothing to be worn on all aprons.
c) Marshalling is mandatory on all aprons.
d) Due to the nature of the operation and high risk of turbulence from factory buildings Hawarden AD is not available to any aircraft with a MTOW of less than 450 KG, or to gliders, motor-gliders, flex-wing microlights and gyrocopters.
e) Tail-wheel type aircraft (tail-draggers) are not permitted unless the pilot-in-command has at least 200 hours on type.
f) APU and/or engine running not permitted outside operational hours of ATC/RFFS.

2 GROUND MOVEMENT

a) The visibility of Aprons N and C from the ATC Control Tower is restricted. Aircraft may be issued with conditional clearances concerning other aircraft movements. Aircraft movements and engine running on these aprons are subject to ATC approval.
b) The area west of Taxiway D is defined as Apron A. All aircraft operations are subject to ATC clearance on Apron A.

3 CAT II/III OPERATIONS

a) CAT II/III Operations not available.

b) **Low Visibility Procedures (LVPs)**

i. LVPs in force when visibility 1639 M or less;
ii. Visibility 800 M or less - operations restricted to one aircraft movement at a time;
iii. Visibility 400 M or less - all airfield operations cease until visibility increases above 400 M.

4 WARNINGS

a) Restricted Area EGR311, 5 NM north of the AD.
b) Complex CAS in the vicinity, including:

- Liverpool CTR, North of ATZ;
- Manchester CTA 2500 FT to 3500 FT North of Hawarden;
- PEPZE CTA 3000 FT - FL 195.

Note: *Aircraft must remain clear of CAS unless in receipt of a positive instruction to enter.*

c) The reinforcing steel within the concrete pavement of Runway 04/22 may cause compass deviation on stationary aircraft.
d) Westerly and Easterly surface winds of greater than 15 KT may lead to turbulence from factory buildings.
e) High Ground to 1848 FT AMSL between 5 NM and 10 NM Southwest of the AD.
f) Hangar infringes the southern transitional surface to Runway 04/22 by 7.94 M. It is fitted with an obstruction light.
g) Yellow centre-line guidance on turn pad 04 is for Beluga operations only. All other traffic should self-position within the confines of the turn pad provided with blue edge lighting.
h) Yellow centre-line guidance on turn pad 22 is for Beluga operations only. All other traffic should self-position and use the Take-off from intersection with Taxiways C and N as per AD 2.13.
i) Model aircraft flying site on southern boundary of ATZ (Kinnerton 530817.1N 0025829.7W). Occasional activity Mon-Sun SFC to 400 FT AGL.

5 HELICOPTER OPERATIONS

a) Helicopter FATO 'H' is available for helicopters up to 'd' value not exceeding 16 M, during daylight hours only.
b) Aiming point on Taxiway J is available ONLY for helicopters approved by the aerodrome management in accordance with locally agreed procedures.

6 USE OF RUNWAYS

Not applicable

7 TRAINING

a) VFR and IFR training for based and non-based operators available during published operational hours. Contact ATC for details.
b) Glide approaches are not permitted to Runway 04 from right-hand circuit.
c) Traffic on left hand circuit Runway 04/right hand circuit Runway 22 will operate in close proximity to Liverpool CTR.

EGNR AD 2.21 NOISE ABATEMENT PROCEDURES

The following procedures may be departed from only to the extent necessary for avoiding immediate danger and for complying with ATC instructions.

a) Aircraft should avoid overflying built up areas and dwellings and minimize noise nuisance as far as possible, fly neighbourly and comply with their aircraft specific noise abatement techniques.
b) Jet and multi-engine turbo-prop aircraft must not join the Final Approach Track at a height of less than 1000 FT QFE.
c) All departures, including visual circuit traffic, turning left from Runway 22 must climb straight ahead to I-HDN or I-HWD D1.5 or until passing the A55 road (Junction 36) before turning on track.
d) Helicopters are to avoid overflying the village of Broughton (1 NM southwest of the airport) and the factory buildings that are situated northwest and southeast of Runway 04/22 below 1000 FT QFE.
e) Circuit height: piston engine or single-engine turbo-prop fixed wing 1000 FT; Jet or multi-engine turbo prop aircraft 1500 FT; Helicopters 800 FT.

EGNR AD 2.22 FLIGHT PROCEDURES

1 PROCEDURES FOR AIRCRAFT INBOUND TO HAWARDEN FROM THE AIRWAYS SYSTEM

a) In order to provide improved ATC handling of Airways flights inbound to Hawarden, a system of Standard Inbound Routes is established. In some case these are coincident with Standard Arrival Routes (STARs) to Liverpool Airport in which case the appropriate STAR Designators will be used (See AD 2-EGGP-7).

Approach from	Via	Route	Descent Planning Information (Note)
SE	N601	LESTA - TNT - NANTI - KEGUN (EGGP LESTA 1L STAR)	FL 200 by LESTA FL 100 by NANTI
	T420	ELVOS - TNT - NANTI - KEGUN (EGGP ELVOS 1L STAR)	FL 200 by 25 NM before TNT FL 100 by NANTI
	Y53	PEDIG - NANTI - KEGUN	
S	P16	PEPZE - MONTY - GODPA - KEGUN (EGGP PEPZE 1L STAR)	FL 180 BY PEPZE
	N864	AVTIC - OSWEZ - MONTY - GODPA - KEGUN	
W	L975/UL975	LYNAS - WAL - KEGUN	FL 240 by NATKO FL 130 by ROLEX
	Q36	ABGEP - ALAVA - MALUD - WAL - KEGUN	FL 130 by ALAVA
	Q37	BAVUD - DONAX - MALUD - WAL - KEGUN	FL 130 by DONAX
NW	L10	IOM - WAL - KEGUN	FL 230 by KELLY
	Q38	MAKUX - SOSIM - PENIL - WAL - KEGUN	FL 230 by SOSIM
N	L612	CROFT - WAL - KEGUN	FL 200 10 NM before LAKEY
NE	POL	POL - WAL - KEGUN	
E	L975	DESIG - WAL - KEGUN	FL 290 by VEGUS FL 170 by UPTON

Note: *For planning purposes only, pilots within the ATS Route Structure should plan for possible descent to the levels indicated. Holding at KEGUN as published in AD 2-EGGP-7.* ***Actual descent clearance will be as directed by ATC****.*

i. **Holding**
ii. **Loss of Communications**

1. Follow the appropriate loss of communications procedures detailed at ENR 1.1.3 to KEGUN. Descend at KEGUN to leave controlled airspace and proceed to NDB(L) HAW and carry out an appropriate instrument approach procedure in accordance with the standard loss of communications procedures.

b) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.
c) Circuit directions variable. Circuit heights: Fixed-wing piston 1000 FT QFE, Jet 1500 FT QFE, Helicopters 800 FT QFE.
d) Standard Terminal Arrival Routes (STAR) refer to AD 2-EGGP-7.
e) Pilots are to advise POB on first contact with ATC.

2 PROCEDURES FOR AIRCRAFT DEPARTING HAWARDEN TO JOIN THE AIRWAYS SYSTEM

All Airways departures will be issued with a standard outbound clearance referred as a REXAM 5 or WAL 4 departure as follows:

a) REXAM 5 Runway 22 — join controlled airspace on track REXAM climbing to 5000 FT ALT. If no contact with Scottish Control by REXAM, take up a right hand orbit at REXAM and re-contact Hawarden on previous frequency;
b) REXAM 5 Runway 04 — after departure, immediate right turn remaining outside the Manchester CTA, join controlled airspace on track REXAM climbing to 4000 FT ALT, on crossing the WAL 167R, climb to 5000 FT. If no contact with Scottish Control by REXAM, take up a right hand orbit at REXAM and re-contact Hawarden on previous frequency;
c) WAL 4 Runway 04: Turn immediately left on track WAL, climb to altitude 4000 FT. If no contact with Scottish Control, take up a right hand orbit at WAL and re-contact previous ATC agency;
d) WAL 4 Runway 22: Turn immediately right on track WAL, climb to altitude 4000 FT. If no contact with Scottish Control, take up a right hand orbit at WAL and re-contact previous ATC agency.

Note 1: *The transition altitude for this procedure is 5000 FT due to the proximity of the Manchester TMA. Aircrew should ensure that autopilots and FMC's are set accordingly.*

Note 2: *Scottish Control Frequency 128.055 MHz.*

3 RADIO MANDATORY ZONE (RMZ)

For flight within the RMZ aircraft commanders must comply with one of the following:

a) Establish satisfactory two-way RTF communication with and pass pertinent flight details to Hawarden Radar (120.055 MHz) prior to entering the RMZ. Maintain two-way communication with Hawarden Radar whilst operating inside the RMZ, unless otherwise instructed.
b) Display the Hawarden Frequency Monitoring Code (FMC) (*4607) with Mode C as detailed below and in ENR 1.6 paragraph 2.6, UK SSR Code Allocation Plan, and monitor Hawarden Radar (120.055 MHz) prior to entering and whilst inside the RMZ. Pilots must maintain a listening watch and establish two-way RTF communication, if directed, whilst operating inside the RMZ.

Selection of the FMC does not imply receipt of an ATC service and pilots remain responsible for navigation, separation, terrain clearance, and are expected to remain outside of Controlled Airspace at all times.

When a pilot leaves the RMZ they should deselect the FMC.

c) Non-radio aircraft should contact Hawarden ATC by telephone (01244-522012), SMS text (07786-208291) or email (atcopshawarden@airbus.com) prior to commencing any planned flight that will enter or cross the RMZ, supplying aircraft registration, type, estimates and points of entry/exit, planned altitudes and duration/activity in the RMZ (if applicable). On receipt of this information an acknowledgement will be issued by ATC Hawarden.
d) Conduct flight in accordance with valid Letter of Agreement with Hawarden ATC.

4 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside the Hawarden RMZ within the area defined by straight lines joining successively the following points and maintaining a listening watch only on Hawarden Radar frequency, 120.055 MHz, are encouraged to select SSR code 4607.

531714N	0031104W	–	531427N	0030140W	-
530626N	0024349W	–	530314N	0024935W	-
525503N	0030414W	–	525508N	0030932W	-
530209N	0031953W	–	531020N	0032115W	-

531525N 0031346W – 531714N 0031104W.

b) Selection of 4607 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Hawarden RMZ at all times.
c) Whilst squawking 4607, pilots should be aware that Hawarden Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 4607 shall be deselected.

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1893
HEIGHTS IN FEET AGL (785)

HAWARDEN

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **1800** in the sector defined by the lateral limits; 531902N 0030414W - 531959N 0030250W thence clockwise by an arc of a circle radius 8NM centred on 531445N 0025246W to 530929N 0024245W - 530339N 0025113W - 531258N 0025906W - 531902N 0030414W.

b) **2200** in the sector defined by the lateral limits; 531258N 0025906W - 530339N 0025113W - 530123N 0025431W thence clockwise by an arc of a circle radius 8NM centred on 530637N 0030432W to 525957N 0025712W - 531258N 0025906W.

c) **2900** in the sector defined by the lateral limits; 531151N 0031435W - 531902N 0030414W - 531258N 0025906W - 525957N 0025712W thence clockwise by an arc of a circle radius 8NM centred on 530637N 0030432W to 525838N 0030434W thence anti-clockwise by an arc of a circle radius 5NM centred on 530205N 0031032W to 530450N 0031728W thence clockwise by an arc of a circle radius 8NM centred on 530637N 0030432W to 531151N 0031435W.

d) **3100** in the sector defined by the lateral limits; 530450N 0031728W thence clockwise by an arc of a circle radius 5NM centred on 530205N 0031032W to 525838N 0030434W thence clockwise by an arc of a circle radius 8NM centred on 530637N 0030432W to 530450N 0031728W.

OUTSIDE THE DESIGNATED APPROACH SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher to **NDB(L) HAW**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) HAW**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of a approach surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of Instrument approaches other than SRA is cleared to intercept the final approach track.**

EGNJ — HUMBERSIDE

EGNJ AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGNJ — HUMBERSIDE

EGNJ AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 533424N Long: 0002105W Centre of Runway 02/20.
2	Direction and distance from city	11 NM S of Hull/22 NM NNE of Lincoln.
3	Elevation / Reference temperature / Mean Low Temperature	121 FT / 18 °C / -
4	Geoid undulation at AD ELEV PSN	152 FT
5	Magnetic Variation / Annual Change	1.11°E (2027) / 0.18°E
6	AD Administration Address Telephone Telefax	HUMBERSIDE INTERNATIONAL AIRPORT LTD. Humberside Airport, Kirmington, Ulceby, North Lincolnshire DN39 6YH. 01652-688456 (Administration) 01652-682022 (ATC) 01652-682020 (ATIS) 07718-524072 (Terminal Supervisor during operating hours) 01652-682041 (Terminal Services) 01652-680244 (ATC)
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGNJ AD 2.3 OPERATIONAL HOURS

1	AD Administration	0620-2115 (0510-2015). Note: All movements 2115-0630 (2015-0530) are Prior Permission Required (PPR), see also AD 2.20.
2	Customs and immigration	As AD hours.
3	Health and sanitation	-
4	AIS Briefing Office	As AD hours.
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	As AD hours. See also AD 2.18.
8	Fuelling	During AD hours. By prior arrangement outside of published hours.
9	Handling	As AD hours.
10	Security	As AD hours.
11	De-icing	Provided by Swissport Aircraft Services during AD hours. By prior arrangement outside published hours.
12	Remarks	Extension of opening hours available. Contact the Terminal Supervisor 07718-524072. Charges apply.

EGNJ AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Full cargo handling facilities. Perishable Hub. DfT Approved Regulated Agent (Anglia Air Freight). 45.5 Tonnes Class 1 NEQ Loading/Unloading Capability. Section Five (Firearms Act) Approved. Nearest railway siding: Barnetby 2 NM.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL. W80, W100, Straight Mineral 80 and Straight Mineral 100.
3	Fuelling facilities/capacity	Bowser facility.
4	De-icing facilities	Kilfrost ABC - K plus, Type 2, 75/25.
5	Hangar space for visiting aircraft	Limited. Prior arrangement only.
6	Repair facilities for visiting aircraft	Limited.

7	Remarks	All aircraft operating for hire and reward, non-based international flights or aircraft above 3 tonnes MTOW, are required to be handled by a handling agent approved by the airport authority. Swissport (Commercial/Passenger/Cargo) Full Handling service available: Tel: +44 (0)1652-688491; Fax: +44 (0)1652 688060; e-mail: huy.ops@swissport.com Weston Aviation (Executive/Business Aviation) Dedicated FBO with usual passenger and crew facilities: Tel: +44 (0)1652 680922. Fax: +44 (0) 1652 680927. e-mail: humberside@westonaviation.com website: www.westonaviation.com

EGNJ AD 2.5 PASSENGER FACILITIES

1	Hotels	On site and local hotels.
2	Restaurants	Restaurant and Bar.
3	Transportation	Resident taxis, buses and car hire. Nearest railway station: Barnetby 2 NM.
4	Medical facilities	Limited first aid.
5	Bank and Post Office	Bureau de change, ATM in terminal.
6	Tourist Office	Limited tourist information.
7	Remarks	-

EGNJ AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 Category 7 and 8 available by arrangement
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	Limited Facilities Available. Contact Tel: 01652-682052 (RFFS Station Manager).
4	Remarks	-

EGNJ AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical: snow brushes, ploughs. Chemical: runway/taxiway/apron anti/de-icing dependent on conditions.
2	Clearance priorities	Available on request from airport management. Priorities are subject to change dependent on expected movements and weather conditions.
3	Remarks	Up to date surface state reports available from: ATC 01652-682022. Fax: 01652-680244. Or via SNOWTAM.

EGNJ AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	GA APRON Surface: Asphalt PCR 155/F/B/X/U LIGHT AIRCRAFT Surface: Grass Strength: Up to 2500 kg. MAIN APRON Surface: Concrete/Asphalt/Block PCR 434/F/B/X/U SAR APRON Surface: Concrete PCR 38/R/D/W/T SOUTHERN Surface: Concrete PCR 554/R/B/X/U

2	Taxiway width, surface and strength	Taxiway ALPHA: 23 M Surface: Asphalt PCR 434/F/B/X/U Taxiway BRAVO: 10.5 M Surface: Asphalt PCR 63/F/B/X/U Taxiway CHARLIE: 7.5 M Surface: Asphalt PCR 28/F/B/X/U Taxiway DELTA: 15 M Surface: Asphalt PCR 410/F/B/X/U Taxiway DELTA EXTENSION: 7.5 M Surface: Asphalt PCR 410/F/B/X/U between Hangar 9 and 11. Taxiway ECHO: 7.5 M Surface: Concrete PCR 15/R/B/X/U Taxiway GRASS: 7.5 M Surface: Grass Strength: Up to 2500 kg.
3	Altimeter checkpoint location and elevation	73 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aerodrome Chart.
6	Remarks	For Taxiway Delta and Taxiway Delta Extension, see restrictions at EGNJ AD 2.20 Local Traffic Regulations, paragraph 2, Ground Movement.

EGNJ AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1, 2, 2R, 3, 5, 6 and 8 are nose-in/pushback operation for aircraft with a wingspan greater than 22 m. No guidance other than centre-line. Marshalling guidance will be given to indicate the stop position for pilots. If using stands 2N, 2S or 3N, 3S together, marshalling guidance must be provided with a maximum wingspan of 15.85 m. Stands 2N, 2S, 3N, 3S, 4R and 4 are self-manoeuvring stands for use by aircraft with a wingspan of 22 M or less. Stand 7 is a self-manoeuvring (marshalled) code D stand.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 02/20: Runway 02/20: Runway designation, landing thresholds, centre-line, touchdown and aiming point markings. Runway 02/20 Turnpad: Runway turnpad markings available on 02/20 for Boeing 767-300 or smaller. The following aircraft nose gear angles apply: Boeing 767-300 - 61 degrees required, Boeing 757/A321 - 60 degrees required. 08/26: Runway 08/26: Runway designation, landing thresholds and centre-line markings. Taxiway marking aid(s): Painted centre-line and appropriate taxi-holding point markings available on all taxiways. Taxiway light(s): Alpha: Coded green centre-line & blue edge lights, runway guard lights. Bravo: Green centre-line reflective markers and runway guard lights. Charlie: Blue edge lights and runway guard lights. Delta: Blue edge reflective markers. Echo: Green centre-line reflective markers.
3	Stop bars and runway guard lights (if any)	At runway Holding Point Alpha.
4	Other runway protection measures	-
5	Remarks	WDI: 533406.02N 0002126.73W (threshold Runway 02, LGTD); 533452.35N 0002037.47W (threshold Runway 20, LGTD); 533422.78N 0002059.32W (midpoint Runway 02/20). Apron floodlights. Due to apron congestion, jet aircraft are to apply minimum thrust when starting and when taxiing.

EGNJ AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use of this aerodrome is subject to Standard Conditions of Use, contained within the Fees and Charges booklet, a copy of which can be found at https://www.humbersideairport.com/about-us/fees-and-charges/, or requested from the Finance department, Tel: +44 (0)1652-682032 or by e-mail: enquiries@humbersideairport.com.
b) Taxiway/Taxilane Delta - Code C (Restricted) – Delta strip width is 41 M (physical width is 15 M); wingspan is limited to 32 M with a main gear span of 9 M or less and a main wheel base of less than 18 M.
c) Taxiway/Taxilane Delta Extension - Code A (Extended) – Delta strip width is 41 M (physical width is 7.5 M); wingspan is limited to 32 M with a main gear span of 4.5 M or less.
d) Ground running of aircraft engines above ground idle power is not permitted on apron areas. All ground running between 2115-0630 (2015-0530) is subject to prior approval by ATC.
e) Aircrew are to wear Hi-visibility jackets whilst on apron areas and all visiting pilots are required to carry photographic identification.
f) Not available to aircraft unable to communicate by radio with ATC.
g) All movements between 2115-0630 (2015-0530) are PPR; note that the airport reserves the right to close on Public Holidays and is normally closed on 25 December and 1 January. All requests to operate within PPR notified hours are to be made through the Terminal Supervisor, Tel: 07718-524072; fees and charges will apply.
Requests for extension to operating hours made less than 2 hours before notified closing time cannot be guaranteed.

2 GROUND MOVEMENT

a) Non-Handled visiting aircraft under 3 tonnes are to report to the Vehicle Control Post adjacent to the apron (marked by an illuminated C). Please keep to designated walkways. High visibility clothing must be worn on Apron areas.

3 CAT II/III OPERATIONS

a) Humberside Airport is not equipped for CAT II/III operations; however, Low Visibility Procedures (LVP) are used to protect CAT I operations.
b) Preparation for LVP will commence when the RVR is 1000 M and falling.
c) Pilots will be informed when LVP are in operation by ATIS or by RTF.
d) Runway Departure Restriction: See paragraph 6 (f) below.

4 WARNINGS

a) Light aircraft are warned of the possible effect of wake turbulence by preceding helicopters on approach or departure.

b) Light aircraft should also be aware of the possible effect of rotor downwash generated by large helicopters operating through the main apron area.
c) **Caution:** Pilots are reminded that parachuting takes place at Hibaldstow unlicensed aerodrome between FL 160 and ground level.
d) Concentrations of birds in/on agricultural areas on the approaches to all runways. Deterrent measures within the aerodrome's boundaries are carried out by the Bird Control Unit and pilots may be requested by ATC to delay a departure or arrival if bird concentrations within the Bird Control Unit's area of control prove difficult to disperse.
e) Helicopter Main Routing Indicators (HMRIs) are established between Humberside and the Southern North Sea off-shore safety area.
f) **Caution:** Pilots are reminded of the close proximity of EGD307 Donna Nook; Military aircraft performing high energy manoeuvres and unable to conform to the Rules of the Air.
g) Rising ground infringes the approach surface of Runway 02 (1:50) for the final 1000 M. Maximum penetration above the 1:50 is 4.18 M at a distance of 250 M from the threshold, 90 M right of centre-line.
h) Rising ground penetrates the Take-off and Climb Surface of Runway 20 (1:50) out to a distance of 1000 M. Maximum penetration above 1:50 is 4.18 M at a distance of 250 M from the threshold, 90 M to the left of centre-line.
i) A wooden post and rail fencing adds a further 1.3 M to the rising ground.
j) SAR operations may occur H24, including outside of the operating hours of the aerodrome and ATZ. Pilots are recommended to make a blind call on the Humberside Tower channel 124.905 MHz when the aerodrome is published closed and they are transiting through or close to the ATZ.

5 HELICOPTER OPERATIONS

a) Helicopters to land as instructed by ATC.
b) Air taxiing to be conducted with caution due to apron congestion.
c) Rotor running refuelling is subject to prior agreement and 30 minutes notice.

6 USE OF RUNWAYS

a) Jet aircraft to carry out right hand circuits when landing on Runway 20.
b) Aircraft taxiing for departure on Runway 02 or landing on Runway 20 with a MTWA of 9000 KG or more must either use the turning circle facilities or the concrete runway surface to carry out 180° turns.
c) Aircraft taxiing for departure on Runway 20 with a MTWA of 9000 KG or more must either use the turning circle facility or must be north of the Runway 20 Threshold when carrying out 180° turns.
d) Aircraft with a MTWA of less than 9000 KG must use as much of the available runway width as possible, when turning to backtrack on the tarmac section of Runway 02/20.
e) Runway 08/26 is restricted to aircraft with an all up weight of less than 5000 KG. Restriction does not apply to rotary aircraft (tiltrotor aircraft are not authorised to use Runway 08/26).
f) Use of Runway 08/26 is available only during daylight hours.
g) Runway Departure Restriction: Departures in RVR conditions of less than 400 M are not permitted unless an AOC holder has a less restrictive EASA or State authorised take-off minima.

7 TRAINING

a) Training flights are subject to prior approval and acceptance by ATC. When accepting training flights, ATC may issue slot times.
b) Limited availability for Instrument Training Flights.

EGNJ AD 2.21 NOISE ABATEMENT PROCEDURES

a) Aircraft should avoid overflying local villages; Kirmington, Searby, Grasby, Barnetby and the grounds of Brocklesby House.

EGNJ AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

2 UK FIS

a) Public Transport aircraft with a MAUW greater than 5000 KG operating under IFR will be provided with a Deconfliction Service unless requested otherwise.

3 DEPARTURES JOINING THE AIRWAY SYSTEM

a) Flight plans are to be submitted to join at GOLES or OTBED.

4 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 1554
HEIGHTS IN FEET AGL (1154)

HUMBERSIDE

MINIMUM INITIAL ALTITUDE
Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is **1700** in the sector defined by the lateral limits; 533220N 0003701W - 534233N 0003000W thence clockwise by an arc of a circle radius 8NM centred on 533930N 0001733W to 533627N 0000508W - 532616N 0001214W thence clockwise by an arc of a circle radius 8NM centred on 532918N 0002436W to 532534N 0001247W - 532148N 0001959W thence clockwise by an arc of a circle radius 8NM centred on 532918N 0002436W to 533220N 0003701W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:
a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.
*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3000**, or last assigned level if higher to **NDB(L) KIM**†.
Intermedlate and FInal Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **NDB(L) KIM**†.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of **NDB(L) KIM**.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. The ATC Surveillance service is provided by Primary and/or Secondary Radar equipment.
7. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
8. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**

Rate of descent	G/S KT	160	140	120	100	80
	FT/MIN	970	850	720	610	490

AIRCRAFT UNABLE TO RECEIVE DME I-HS
As for procedure with DME except substitute timings for outbound legs 2.2MIN (CAT A,B); 1.7MIN (CAT C,D) prior to base turn. When established descend to MDH.

DIRECT ARRIVAL PROCEDURES (Subject to ATC approval). For aircraft able to receive VOR DME OTR and DME I-HS in addition to NDB(L) KIM.

DIRECT ARRIVAL FROM SOUTH
Arrival **not below MSA** to intercept and establish on OTR VOR R201 (QDM 021°). After passing I-HS DME 15 descent **not below 2000.** See plan for continuation.

DIRECT ARRIVAL FROM SOUTHWEST
Arrival **not below MSA** to intercept and establish on OTR VOR R236 (QDM 056°). After passing I-HS DME 15 descent **not below 2000.** See plan for continuation.

NOTE Lowest altitude to commence procedure from hold is **2000.**

CHANGE (13/25): MAG VAR UPDATED. PAGE RENUMBERED.

EGPE AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) All operators, international flights (including executive and private General Aviation) regardless of MAUW, must make prior arrangements with a handling agent for ground handling of all flights.
b) Inverness Airport is strictly PPR. Requests should be made to Inverness Apron Operations Tel: +44 (0)1667-464307, Mobile: +44 (0)7917-071144 or e-mail: invernessapronoperations@hial.co.uk. Domestic flights must PPR a minimum of 2 hours before scheduled arrival. International Flights must PPR a minimum of 24 hours before scheduled arrival.
c) Smoking airside, including the use of e-cigarettes, is strictly prohibited.
d) Use of Inverness aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.
e) Due to restricted parking availability all aircraft should be left in a towable condition wherever practicable. Signage indicating that aircraft are ready for tow should be displayed in a prominent position or, where no signage is available, handling agents informed of the aircraft state.
f) In order to comply with airport regulations, all persons entering airside areas on foot are required to wear high visibility clothing, appropriate PPEs and be in possession/display an appropriate and valid HIAL ID pass.
g) All aircraft using Inverness Aerodrome or its facilities are required to have third party liability insurance cover. Proof of this insurance should be available for inspection at any time whilst the aircraft is on the aerodrome.

2 GROUND MOVEMENT

a) The taxiway between the north end of the south apron and threshold Runway 11 is available for use only by aircraft with a wingspan up to but not including 36 M.
b) To permit crossing of Taxiway Echo through the North Apron by non-radio equipped vehicles, two crossings are installed, indicated by black/white checked edges. One, at the north end, leads to the GA Terminal, the other to AFS and the Terminal Building. These crossings

are not available during LVP operations, ATC will advise. All pedestrians, wishing to cross Taxiway Echo are required to use the marked crossings.

c) All ground movement west of Hold D is at the pilots discretion. Only Inverness based aircraft, aircraft under tow to Hangar 3, or aircraft for which previous arrangements have been made with a handling agent or Apron Control (07917-071144), are permitted west of Hold D.
d) Aircrew are requested to use minimum power settings whilst turning to leave the parking stands on either apron in order to avoid blast injury to personnel or blast damage to other aircraft.
e) Push-back not available at Inverness, so marshalling is routinely provided to all aircraft movements to the North and South Apron. Therefore, pilots of inbound aircraft are not to turn off Taxiway Echo or Alpha prior to parking, nor are pilots of outbound aircraft to request taxi, unless they are in visual contact with, and receiving guidance from, the Duty Marshaller. Aircraft facing out towards the taxiway will not require a marshaller for taxi off stand. In the event that no marshaller is in sight at the appointed time, the pilot should hold position and advise ATC of the situation. In such circumstances ATC may instruct the pilot to await the marshaller, or, if the delay is likely to be excessive, advise the pilot to park or leave the apron at his discretion. This instruction will be in respect of other aircraft movements and will take no account of vehicle and personnel movements on the apron.
f) ATC will issue clearances to vehicles on the TWR VHF frequency, which is cross-coupled to the UHF GMC frequency. Pilots will not hear responses from drivers.

3 CAT II/III OPERATIONS

a) Inverness Airport is not equipped for CAT II/III operations; however, Low Visibility Procedures (LVP) are used to protect CAT I operations.
b) Preparation for LVP will commence when the reported MET visibility or IRVR is 2000 M and falling and cloud ceiling 300 FT and below.
c) Pilots will be informed when LVP are in operation by ATIS.

4 WARNINGS

a) No ground signals except light signals.
b) Caution should be exercised when taxiing to Hangar 1 due to the close proximity of an adjacent security fence.
c) Despite the presence of a deer fence, roe deer are occasionally seen on the airport. Pilots are requested to report the location of any animals sighted to ATC.
d) Due to coastal location, birds are a hazard throughout most of the year. This hazard level is raised during the migration season when large numbers of wintering wildfowl transit across approaches to feeding locations on farmland adjacent to the airport.
e) In a strong southerly airstream, severe turbulence may occur below 4000 FT. In lee wave conditions, the turbulence may be particularly bad at very low levels
f) High ground to the South 1500 FT at 5 NM rising to 2018 FT at 7.4 NM.
g) Paragliding and Hang gliding takes place from Alturlie Point 573120.23N 0040719.91W. Within an area known as the Alturlie Box 573120.23N 0040719.91W - 573053.67N 0040800.45W - 573043.88N 0040805.89W - 573049.42N 0040900.31W - 573138.30N 0040839.13W - 573120.23N 0040719.91W. Due to the serious risks presented by rotor downwash and wake turbulence, helicopter pilots should avoid overflying or operating in close proximity to this area below 1500 FT AMSL when active. The status of the Alturlie Box is available from ATC.
h) Pilots of aircraft with a MCTOM exceeding 40,000 KG are requested to carry out all 180 degree turns on the concrete portion of RWY 05/23 (Approx. first 220 M from threshold 23, full runway width).
i) Operators of UAS planned to fly within the Inverness FRZ should inform Inverness ATC with no less than 24 hours before flight to obtain approval.

5 HELICOPTER OPERATIONS

a) Helicopters are expected to make approaches to, and departures from notified runways. Those with wheeled undercarriage will be treated similarly to fixed wing aircraft and must ground taxi within the apron/taxiways. For skid-equipped helicopters the aiming point will generally be Runway 11 threshold followed by hover taxi to the apron. Helicopters can generally expect to be parked on the east side of the North apron. No hover taxiing is permitted west of Hold DELTA.
b) Exceptionally, if weather conditions make lengthy hover taxiing undesirable, departure into wind over the grass area west of Runway 11/29 will be permitted. Overflying the aprons and Terminal building is to be avoided.

6 USE OF RUNWAYS

a) Runway Departure Restriction – Except where an AOC holder has a less restrictive State authorised take-off minima, departures in RVR conditions of less than 550 M are not permitted.
b) Runway 11/29 is not available for flight operations during night hours.

7 TRAINING

a) Practice engine failures after departure by single engine aircraft are permitted when Runway 23 is in use provided the aircraft has passed the aerodrome access road.
b) Asymmetric training by multi-engined aircraft is permitted following departure or go-around on any runway, provided that the aircraft concerned will not descend below 500 FT QFE (or QNH equivalent) during such manoeuvres.
c) All training by visiting aircraft must be pre-booked with ATC on 01667-464276.
d) The following procedures are applicable for visual circuit training aircraft only with a MTOW of 5700 KG or more:

   i. Circuit training shall only be permitted Mon-Fri 0800-1900 (0700-1800) and Sat-Sun 0900-1800 (0800-1700);
   ii. In the event of continuous circuit flying for 2 hours, a 30 minute break from circuit training shall occur for all aircraft with a MTOW of 5700 KG or more;
   iii. Circuit direction will be frequently varied by ATC;

iv. Where possible, pilots shall avoid overflying surrounding villages whilst operating in the circuit. This is particularly important for those portions of the flight that are operated below 1000 FT.

EGPE AD 2.21 NOISE ABATEMENT PROCEDURES

Not applicable

EGPE AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

2 RESTRICTIVE AREAS

a) Inverness airport is situated adjacent to RAF Lossiemouth, and Danger Area EGD703, Tain Range. IFR flights may require extended vectoring due to military activity in the area.

3 AIR TRAFFIC SERVICES OUTSIDE CONTROLLED AIRSPACE

a) Pilots of aircraft filing IFR flight plans or booking out IFR shall notify ATC prior to departure if any service other than a Deconfliction Service is likely to be requested.
b) This does not preclude pilots from requesting any appropriate service once airborne.
c) The ILS radiates H24 but is not monitored outside the hours of ATC. Only operators approved by the airport authority are permitted to fly approaches when ATC is published closed.

4 TRANSITION LEVEL

a) Transition Level available from ATC on first contact.

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

MINIMUM INITIAL ALTITUDE
Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:
a) **2300** in the sector defined by the lateral limits; 575332N 0040321W - 575330N 0034000W - 573050N 0034003W - 573233N 0040230W - 575332N 0040321W.
b) **2700** in the sector defined by the lateral limits; 573416N 0043000W - 574500N 0040300W - 573233N 0040230W - 572213N 0041554W - 572211N 0043000W - 573416N 0043000W.
c) **3300** in the sector defined by the lateral limits; 573233N 0040230W - 573050N 0034003W - 572211N 0034000W - 572213N 0041554W - 573233N 0040230W.
d) **3300** in the sector defined by the lateral limits; 575331N 0042150W - 575332N 0040321W - 574500N 0040300W - 573834N 0041915W - 575331N 0042150W.
e) **3900** in the sector defined by the lateral limits; 572211N 0043000W - 572211N 0034000W - 571332N 0034000W - 571247N 0043000W - 572211N 0043000W.
f) **4500** in the sector defined by the lateral limits; 575330N 0043000W - 575331N 0042150W - 573834N 0041915W - 573416N 0043000W - 575330N 0043000W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:
a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.
*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **5600**, or last assigned level if higher, to **VOR INS**†.
Intermediate and Final Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **VOR INS**†.
†In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.

EGPI — ISLAY

EGPI AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGPI — ISLAY

EGPI AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 554100N Long: 0061535W Mid point of Runway 12/30
2	Direction and distance from city	4.5 NM NNW of Port Ellen.
3	Elevation / Reference temperature / Mean Low Temperature	56 FT / 14 °C / -
4	Geoid undulation at AD ELEV PSN	183 FT
5	Magnetic Variation / Annual Change	1.35°W (2027) / 0.21°E
6	AD Administration Address Telephone	HIAL Islay Aerodrome, Isle of Islay, Argyll, PA42 7AS. 01496-302361
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGPI AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Fri 0830-1840 (0730-1740); Sat 0830-1340 (0730-1240); Sun 1215-1655 (1115-1555).
2	Customs and immigration	Nil.
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	See also AD 2.18.
8	Fuelling	By prior arrangement.
9	Handling	-
10	Security	-
11	De-icing	-
12	Remarks	This aerodrome is strictly PPR.

EGPI AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	-
2	Fuel and oil types	80, 100, W80, W100, W15, W50
3	Fuelling facilities/capacity	-
4	De-icing facilities	-
5	Hangar space for visiting aircraft	-
6	Repair facilities for visiting aircraft	-
7	Remarks	-

EGPI AD 2.5 PASSENGER FACILITIES

1	Hotels	For details contact Tel: 01496-810254.
2	Restaurants	-
3	Transportation	Buses, taxis, car hire.
4	Medical facilities	Limited first aid facilities available.
5	Bank and Post Office	-
6	Tourist Office	-
7	Remarks	Ambulift and passenger lift on/off facilities are available during the aerodromes published opening hours.

EGPI AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A3 RFF Category 4. RFF Category 5 by prior arrangement. RFF Category 5 may be accepted under RFF Category 4 remission.
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	-
4	Remarks	Out of hours recovery of aircraft - emergency contact details: 07876-727800.

EGPI AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical and chemical de-icing. Runways 12/30 and 07/25 de-iced/anti-iced with KFOR (Potassium Formate fluids) and/or NAAC (Sodium Acetate solids).
2	Clearance priorities	Runways, Taxiway, Aprons.
3	Remarks	For latest information contact 01496-302361.

EGPI AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	MAIN APRON Surface: Asphalt, Grooved PCR 130/F/D/Y/U
2	Taxiway width, surface and strength	-
3	Altimeter checkpoint location and elevation	Main Apron 54 FT
4	VOR checkpoints	-
5	INS checkpoints	-
6	Remarks	-

EGPI AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	-
2	Runway and taxiway markings and lighting	-
3	Stop bars and runway guard lights (if any)	-
4	Other runway protection measures	-
5	Remarks	2 LGTD WDI: 554056.66N 0061512.31W, 554103.20N 0061553.62W.

EGPI AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGPI AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	MET OFFICE ABERDEEN
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	MET OFFICE ABERDEEN 9 Hours.
4	Trend forecast Interval of issuance	- 30 minutes.
5	Briefing/consultation provided	Self-briefing.
6	Flight documentation Language(s) used	Charts abbreviated plain language. TAF's/METAR's. English.

7	Charts and other information available for briefing or consultation	Metforms 214 and 215.
8	Supplementary equipment available for providing information	Telephone and email.
9	ATS units provided with information	ISLAY
10	Additional information (limitation of service, etc.)	During airport opening hours.

EGPI AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Aerodrome is not available to aircraft unable to communicate by radio.
b) Use of Islay aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.

2 GROUND MOVEMENT

a) Do not taxi or park aircraft on grassed areas adjacent to the Runways unless marshalled by Airport Staff.
b) Link taxiway between Runway 12/30 and 07/25 closed to all aircraft.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) No ground signals.
b) Large flocks of geese are prevalent in the vicinity of the aerodrome between the months of October and March.
c) Uncontrolled public road 700 M from start of TORA Runway 07.
d) Grass areas are soft and unsafe. Poor load bearing characteristics may be found on the runway/taxiway strips and the area adjacent to the apron. Only marked taxiway to be used.

e) Mobile obstructions in undershoot Runway 12, farm track east of Runway 30 threshold and uncontrolled public track northeast of Runway 12/30 (outside Islay AD boundary).
f) Occasional kite flying takes place in Runway 12 undershoot especially outside aerodrome hours.
g) HT cables on high ground rising to 358 FT AMSL at 1.5 NM east from ARP.
h) Hill rising to 1612 FT AMSL to the east.
i) Hill rising to 663 FT AMSL at 6.1 NM south from ARP.
j) Hill rising to 761 FT AMSL at 6.9 NM northwest from ARP.
k) Bird activity high on Runway 25 approach all year round with birds venturing down onto the Aerodrome on occasions.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Runway departure restriction for aircraft requiring the use of a licensed aerodrome

i. Runways 07/25 and 12/30. Except where an AOC holder has a less restrictive State authorised take-off minima, departures when the reported MET visibility is 800 M or less are not permitted.

b) Runway 07/25: Remain within the painted runway side stripes.

7 TRAINING

Not applicable

EGPI AD 2.21 NOISE ABATEMENT PROCEDURES

Not applicable

EGPI AD 2.22 FLIGHT PROCEDURES

1 RADIO CALLS

a) Pilots should call 'Islay Information' when within 25 NM radius of the aerodrome and below 4000 FT AAL.

2 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

EGPI AD 2.23 ADDITIONAL INFORMATION

a) Aircraft operators are responsible for the searching of any aircraft parked either overnight or within the demarcated area prior to departure.

8	Remarks	-

EGNS AD 2.3 OPERATIONAL HOURS

1	AD Administration	Mon-Sat 0645-2045 (0545-1945); Sun 0700-2045 (0600-1945); and by arrangement.
2	Customs and immigration	As AD hours. Prior notice required by 1600 (1500) on previous day.
3	Health and sanitation	As ATS hours.
4	AIS Briefing Office	Flight Plans can be telephoned to 01624-827548
5	ATS Reporting Office (ARO)	None
6	MET Briefing Office	As ATS hours.
7	ATS	Mon-Sat 0630-2045 (0530-1945); Sun 0645-2045 (0545-1945). See also AD 2.18.
8	Fuelling	As AD hours.
9	Handling	As ATS hours.
10	Security	H24
11	De-icing	Limited, on request from Handling Agents.
12	Remarks	Hours subject to seasonal and operational extensions - promulgated by NOTAM.

EGNS AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Limited. Contact Airport Administration.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL W80, W100.
3	Fuelling facilities/capacity	Mobile AVGAS 4500 lts. Mobile AVTUR 18, 300 lts. No anti-icing agent available.
4	De-icing facilities	Limited, on request from Handling Agents.
5	Hangar space for visiting aircraft	None
6	Repair facilities for visiting aircraft	Limited.

7	Remarks	Refuelling facilities available during published hours of opening from Avflight Ltd, Tel: 01624-827928. Handling is mandatory for all arriving aircraft. Arrangements should be confirmed in advance with one of the following handling agents: 3 Legs Aviation Services Ltd, Tel: 07555-135443; Email: info@3legsaviationservices.com. The Jet Centre operated by NALjets, Tel: 01624-825100; Email: ops@jetcentre.im. Menzies Aviation Ltd, Tel: 01624-825780; Fax: 01624-825822; Frequency: 129.750 MHz. Opul Jet Centre, Tel: 01624-825100; Email: operations@manxjetcentre.com. Information on charges may be obtained from each nominated handling agent.

EGNS AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotel information via www.visitisleofman.com.
2	Restaurants	Buffet and bar at Airport.
3	Transportation	Buses, taxis and car hire.
4	Medical facilities	Limited first aid treatment. Hospital at Douglas, 6 NM.
5	Bank and Post Office	Cash dispenser and Postal collection at airport.
6	Tourist Office	Isle of Man Tourist Information Centre.
7	Remarks	-

EGNS AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 RFF Category 7 available with 48 hours prior notice. Operational hours as AD hours. Outside these times and by arrangement, reduced RFF category may be provided for specific flights.
2	Rescue equipment	To ICAO Standards.
3	Capability for removal of disabled aircraft	Yes. Contact +44(0)7624-200738.
4	Remarks	-

EGNS AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	2 Snow ploughs, 2 de-icing rigs.
2	Clearance priorities	As determined by aerodrome authority.
3	Remarks	Latest SNOWTAM information from ATC, GRF data available from ATC. Tel: 01624-827546

EGNS AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	APRON Surface: Concrete and asphalt NIL
2	Taxiway width, surface and strength	Taxiway A (A2 TO 21): 18 M Surface: Asphalt PCR 495/F/D/W/T Taxiway A (A2 TO 26): 18 M Surface: Asphalt PCR 500/F/D/W/T Taxiway B APRON TO 08: 18 M Surface: Asphalt PCR 357/F/D/W/T

		Taxiway C APRON TO 08/26: 27 M Surface: Asphalt PCR 500/F/D/W/T Taxiway D (26 TO 03): 11 M Surface: Asphalt PCR 340/F/D/W/T Taxiway E APRON TO 21: 18 M Surface: Asphalt PCR 340/F/D/W/T Taxiway F APRON TO 08/26: 27 M Surface: Asphalt PCR 500/F/D/W/T Taxiway J (08 TO 03): 18 M Surface: Asphalt PCR 340/F/D/W/T Taxiway K: 18 M Surface: Asphalt PCR 327/F/D/W/T Taxiway L (08 TO L4): 18 M Surface: Asphalt PCR 500/F/D/W/T Taxiway L (L4 TO 21): 18 M Surface: Asphalt PCR 495/F/D/W/T
3	Altimeter checkpoint location and elevation	Apron 58 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking Chart
6	Remarks	-

EGNS AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	All stands are marked nose-in/push-back except Stand 3. All stands with the exception of Stands 7 and 8 have numbered identification boards at the head of the stand.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 03/21: EASA markings. Runway designation, threshold, aiming point, touch down point, centre-line, edge line, displaced threshold on Runway 03. 08/26: CAP 168 markings. Runway designation, threshold, aiming point, touch down point, centre-line, edge line on 08/26, displaced thresholds on Runways 08, 26. Touch Down Zone on Runway 26 and 08 are non standard - Runway 08 last two pairs omitted, Runway 26 last pair omitted. Taxiway marking aid(s): Centre-line marking and lighting on Taxiways A, B, C, E, F, J, K and L. Taxiway light(s): Taxiways A, B, C, E, F, J, K and L have green centre-line lighting with blue edge lighting at bends and runway turn-offs, illuminated or reflective signs and stop-bars.
3	Stop bars and runway guard lights (if any)	Stop bars associated with all runway holding points for 03/21 and 08/26, supplemented by blocking stop bars either side of the main runway intersection. Stop bars in use during all operational hours.
4	Other runway protection measures	-
5	Remarks	WDI: (W) 540451.39N 0043754.02W (LGTD) - (E) 540505.88N 0043710.70W (LGTD).

EGNS AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGNS AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	ISLE OF MAN OFFICE
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	ISLE OF MAN OFFICE 9 hours.
4	Trend forecast Interval of issuance	TREND 30 minutes during aerodrome operating hours.
5	Briefing/consultation provided	Forecaster available H24.
6	Flight documentation Language(s) used	Charts abbreviated plain language text. TAFs/METARs. English.
7	Charts and other information available for briefing or consultation	Low Level Weather and Spot Wind Charts for British Isles and near Continent. MET Satellite and Weather Radar images and sequences.
8	Supplementary equipment available for providing information	-
9	ATS units provided with information	ISLE OF MAN
10	Additional information (limitation of service, etc.)	METARs issued half hourly during aerodrome operating hours but hourly when the aerodrome is closed.

EGNS AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to the Isle of Man CTR.
b) Non-radio aircraft are strictly **PPR** through ATC.
c) Instrument training is subject to prior permission from ATC.
d) Under the terms of the Anti-Terrorism and Crime Act 2003, pilots and passengers of private or charter aircraft who have come from or are going to the British Isles, must when requested to do so, make themselves available to be spoken to by an examining officer. In relation to all such flights, the pilot must fully complete a General Aviation Report. Further details can be found here: General Aviation website:
https://www.gov.im/categories/tax-vat-and-your-money/customs-and-excise/arriving-and-leaving-the-island/general-aviation-reporting/
e) Outside published hours of availability, use of the airport is subject to prior permission from the Airport Duty Manager.
f) All parking areas within the critical part of the aerodrome are designated as Customs Area. It shall be the responsibility of the commander of any aircraft that is required to be subjected to Customs inspection to inform ATC at the earliest opportunity.
g) High visibility clothing must be worn on the aprons and manoeuvring area at all times. Health and Safety requirements in respect of ear protection must be observed and are the responsibility of the individuals concerned.

2 GROUND MOVEMENT

a) Due to physical constraints of the apron design, pilots must follow the ground markings at all times.
b) Apron floodlighting is 7 M from the pavement edge and CCTV masts are 4 M from the pavement edge on the west apron. Pilots of aircraft should exercise caution in respect of wing tip clearance. The services of a marshaller are available on request.
c) Class 2 compass calibration base on Runway 21 is only suitable for aircraft with magnetic sensors which are at least five feet above ground. Use governed by prior permission through ATC.
d) Movement to/from Area W at night via D1 only.
e) No taxi lane is available between the east and west aprons. Taxiing through stands 7 & 8 / 8 & 7 is prohibited unless specifically authorised.

3 CAT II/III OPERATIONS

a) Isle of Man Airport is not equipped with CAT II/III procedures, however Low Visibility Procedures are used to protect CAT I operations.

4 WARNINGS

a) Except for light signals ground signals shall not be displayed.
b) Increased bird activity due to coastal location. Bird scaring including the use of pyrotechnics, lethal control and lasers used regularly on the aerodrome.
c) A known windshear hazard exists on short final for Runway 08 when the wind is from the southeast and pilots should adopt appropriate operating procedures. During strong wind conditions, turbulence may be expected on the approach to, or climb out from, any runway.
d) Take-off and landing will be restricted to paved surfaces only.
e) Pilots of helicopters should note the presence of a 10 M anemometer mast in the Met square adjacent to the apron area and exercise due caution when manoeuvring prior to arrival or departure.
f) The presence of high ground to the north of Runway 08/26 centre-line may trigger GPWS alerts if aircraft adopt high rate of descent and/ or fast speed profiles in this sector.
g) Holding position D1 is situated close to the exit from area Whiskey and coincident with the start of the 26 ILS GP critical area. Pilots should exercise extreme caution in observing and complying with holding position D1 to ensure they do not infringe Runway 26 and the GP critical area.
h) Runway 21 - CAUTION - Departing crew should be aware that kite surfing in the vicinity of the climb out is possible during daylight hours.
i) Holding position L1 is situated close to the exit of Area Victor. Pilots should exercise caution in observing and complying with holding position L1 to ensure they do not infringe Runway 08.

5 HELICOPTER OPERATIONS

a) Helicopters are to arrive and depart using the runways as no specified helicopter landing areas are defined.

6 USE OF RUNWAYS

a) Simulated engine failures are not permitted on departure from Runway 26.
b) Pilots should not descend below the indicated PAPI glide path whilst landing on any runway, and the following conditions should be noted:

i. Due to the presence of high ground to the left of the approach for Runway 21, pilots must establish on the runway centre-line before descending on the PAPI glide path.
ii. Due to the presence of an uncontrolled public road in the vicinity of the undershoot area of Runway 03, approaches to this runway are not permitted if the PAPIs are out of service.
iii. The noise abatement procedures as detailed at AD 2.21 should be followed.

7 TRAINING

a) All training flights require approval from ATC.

EGNS AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots of any aircraft using the airport shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport, particularly near Castletown (1 NM southwest) and Ballasalla (1 NM north).
b) Any of these procedures may be departed from to the extent necessary for the avoidance of immediate danger.
c) **Departure - Runway 03:**

All propeller driven aircraft and helicopters must climb straight ahead to 500 FT and:

i. Not commence any left turn until 1 NM from the departure end of the runway; or
ii. Not commence any right turn until past the airport boundary.

All jet aircraft must climb straight ahead to 1000 FT before commencing any turn.

d) **Departure - Runway 08:**

All propeller driven aircraft and helicopters must climb straight ahead to 500 FT and must have passed the airport boundary before commencing any turn. All jet aircraft must climb straight ahead to 1000 FT before commencing any turn.

e) **Departure - Runway 21:**

All propeller driven aircraft and helicopters must climb straight ahead to at least 500 FT and not commence any turn until 1 NM from the departure end of the runway. All jet aircraft must climb straight ahead to 1000 FT before commencing any turn.

f) **Departure - Runway 26:**

All aircraft, including helicopters, departing from Runway 26 shall track the extended centre-line and not commence any turn until:

i. 3 NM or less from IOM DME; or
ii. 2 NM or more from I-RY.

Aircraft unable to receive DME must inform ATC and shall climb straight ahead for 2 minutes after take-off before commencing any turn. This procedure may only be departed from when instructed by ATC.

g) **Arrival - All runways:**

When approaching to land on any runway all aircraft, including helicopters, shall intercept the extended runway centre-line at a minimum range of 2 NM and shall not descend below the PAPI indicated approach path.

EGNS AD 2.22 FLIGHT PROCEDURES

1 FLIGHTS WITHIN ISLE OF MAN CTR AND CTA

a) Isle of Man Airspace is subject to Isle of Man Civil Aviation Legislation, details of which are notified at GEN 1-6-6. Pilots requiring Exemptions or Permissions under the Air Navigation Order, Rules of the Air Regulations 2015 or Standardised European Rules of the Air, should contact the Isle of Man Director of Civil Aviation on 01624-682374.
b) All flights regardless of weather conditions, are required to obtain a clearance from ATC prior to entering the CTR/CTA.
c) All IFR flights within the Isle of Man CTR/CTA must fulfil the requirements for Class D Airspace appropriate to existing weather conditions.
d) Special VFR clearances within the CTR/CTA, in IMC or at night, may be issued subject to traffic conditions and limitations by ATC.
e) As extensions to airport hours are frequent, pilots intending to transit the Isle of Man CTR/CTA outside airport published hours are strongly advised to contact Ronaldsway Approach before entering the CTR/CTA.
f) In the event of failure of remote transmitters/receivers, radio communications to the north of the aerodrome below 3000 FT may be restricted and ATC services reduced accordingly. Pilots should ensure that they do not enter the CTR/CTA without ATC clearance. In the event of difficulty in establishing communication, a Flight Information Service may be available from Scottish Information on frequency 119.875 MHz.
g) Pilots may, upon request, be cleared to self-position directly to final approach for the ILS/DME approach to Runway 08 or Runway 26. Pilots are warned that, in order to maintain adequate terrain clearance, descent will not be issued below 3200 FT QNH if arriving from the north-east sector or in any event below 3000 FT QNH until established on the localiser. Pilots are responsible for arranging their flight to intercept the localiser and glidepath at an appropriate range.

2 PROCEDURES FOR INBOUND AIRCRAFT

a) Standard Routes

Approach from	Via	Route
N	Direct	MIKEL
NE	DCS	IOM

Approach from	Via	Route
NW	L10	SLYDA
SE	L10	KELLY
	M146	LUSOD **(See note)**
SW	Y911	IOM
E	Direct	VANIN

Note: *If inbound traffic via M146 is required to hold it will hold at KELLY as per details in the Table below.*

b) Holding. Holding patterns are as follows:

Isle of Man VOR IOM	Holding axis 079° MAG, turning right at the facility.
KELLY	Holding fix IOM VOR/DME 125°/17 NM on an axis of 305° MAG, turning left at the facility, limiting DME IOM D22.
Ronaldsway NDB RWY 08 Ronaldsway NDB RWY 26	Holding axis 259° MAG, turning left at the facility. Holding axis 079° MAG, turning right at the facility.
VANIN (535907N 0040221W)	Holding fix IOM VOR/DME 101°/26 NM on an axis of 281° MAG, turning right at the facility, limiting DME IOM D31.

Note: *Holding may also take place at SLYDA in accordance with the en-route holding procedure described at ENR 3-6-1-1.*

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Standard Routes.

Departing to	Via	Route
N	Direct	MIKEL/SLYDA
NE	Direct	DCS
E	Direct	VANIN
SE	KELLY	L10
	TIMIS	Q39
SW	IOM	Y911
NW	IOM	L10‡

‡ Unless otherwise instructed by ATC, aircraft on the appropriate routes must establish on track by MIKEL/SLYDA.

4 RADIO COMMUNICATIONS FAILURE PROCEDURES

a) In the event of complete communication failure in an aircraft, the pilot will adopt the appropriate procedures notified at ENR 1.1.3 paragraph 4.2.2 to 4.2.4 inclusive, with the following exceptions:

i. When complete communication failure occurs in an aircraft before ETA or before EAT, when this has been received and acknowledged, the aircraft will:

1. fly to the RWY NDB holding point;
2. hold at the last assigned level until the last acknowledged ETA plus 10 minutes or EAT when this has been received and acknowledged; or, if radio failure occurs after an aircraft has reported over the runway NDB, hold at the last assigned level until ATA plus 10 minutes, or 10 minutes after the last acknowledged communications with ATC whichever is the later;
3. then commence descent for landing in accordance with the procedures notified at ENR 1.1.3, paragraph 4.2.2 to 4.2.4 and effect a landing within 30 minutes (or later if able to approach and land visually).

b) Aircraft that are instructed by ATC to hold at IOM, or KELLY, will in the event of complete communication failure:

i. when an Onward Clearance Time has been received and acknowledged, leave IOM, or KELLY at that time at the last assigned level and proceed to the RWY NDB, then carry out the procedures above;
ii. when ‘Delay Not Determined’ has been transmitted by ATC, the aircraft should not attempt to land at Isle of Man aerodrome and should divert to the alternate destination specified in the current flight plan or other suitable airfield.

5 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 2197
HEIGHTS IN FEET AGL (170)

ISLE OF MAN

APP	135.905	RONALDSWAY APPROACH
TWR	119.005	RONALDSWAY TOWER
RAD	120.855, 125.305, 135.905	RONALDSWAY RADAR
ATIS	123.880	RONALDSWAY INFORMATION
See AD 2.18 for details.		

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **1800** in the sector defined by the lateral limits; 540259N 0044537W - 540452N 0043722W - 541232N 0041523W - 535358N 0040608W - 534546N 0041545W - 535301N 0044350W - 540259N 0044537W.

b) **2000** in the sector defined by the lateral limits; 540304N 0050309W thence clockwise by an arc of a circle radius 8.6NM centred on 540238N 0044835W to 541048N 0045301W - 540401N 0044549W - 535301N 0044350W - 535411N 0044824W - 540139N 0050641W - 540304N 0050309W.

c) **3000** in the sector defined by the lateral limits; 541048N 0045301W - 541337N 0043147W - thence anticlockwise by an arc of a circle radius 3NM centred on 541533N 0042750W to 541429N 0042302W thence clockwise by an arc of a circle radius 8.5NM centred on 540600N 0042335W to 541306N 0041540W - 541232N 0041523W - 540452N 0043722W - 540259N 0044537W - 540401N 0044549W - 541048N 0045301W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3000**, or last assigned level if higher to **RWY NDB**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible follow the Missed Approach Procedure to **RWY NDB**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is that detailed at EGNS AD 2.22 Para 4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. The ATC Surveillance service is provided by Primary and/or Secondary Radar equipment.
7. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
8. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an Intercept of 40° or less, and in the case of Instrument approaches other than SRA is cleared to intercept the final approach track.**
9. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
10. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (13/26): SECTORS REVISED.

EGJJ — JERSEY

EGJJ AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 491229N Long: 0021144W Centre of Runway 08/26.
2	Direction and distance from city	4 NM WNW of St Helier.
3	Elevation / Reference temperature / Mean Low Temperature	277 FT / 18 °C / -
4	Geoid undulation at AD ELEV PSN	160 FT
5	Magnetic Variation / Annual Change	0.83°E (2027) / 0.17°E
6	AD Administration Address Telephone Telefax E-mail address	JERSEY AIRPORT. Jersey Airport, St Peter, Jersey, JE1 1BY Channel Islands. 01534-446008 (Administration) 01534-446086 (ATC) 01534-446301 (ATIS) 01534-446080 (Flight Planning) 01534-446081 (ATC) 01534-446075 (Flight Planning) atcsupervisor@ports.je (ATC) customerrelations@ports.je (General Enquiries)
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGJJ AD 2.3 OPERATIONAL HOURS

1	AD Administration	0700-2100 (0600-2030); and by arrangement.
2	Customs and immigration	As AD hours.
3	Health and sanitation	-
4	AIS Briefing Office	As AD hours (Self-briefing).
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	H24
7	ATS	See item AD 2.18.
8	Fuelling	See item AD 2.4.
9	Handling	As AD hours.
10	Security	H24
11	De-icing	By arrangement with Swissport.
12	Remarks	The AD is not normally available between 2359-0700 (2300-0600) except for SAR or MEDEVAC flights by arrangement. The AD will normally be closed on 25 December except for SAR and MEDEVAC flights by arrangement. Refer also to AD 2.20 item 1 and to AD 2.21.

EGJJ AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Oceanair, Tel: 01534-496920.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL W80, W100, E100 and 100
3	Fuelling facilities/capacity	-
4	De-icing facilities	By arrangement with Swissport: Tel: 01534-747105.
5	Hangar space for visiting aircraft	None.
6	Repair facilities for visiting aircraft	Major for light aircraft. Minor for other aircraft. Channel Island Aero Services Tel 01534- 742373.

7	Remarks	Refuelling not available after 1900 (1800) for AVGAS 100LL, or after 2000 (1900) for JET A-1, except by special arrangement. Commercial airlines must make prior arrangement for ground handling. Communications should be addressed to Airport Coordination Limited (ACL) slot co-ordination by email to LONACXH@acl-uk.org stating the below: (a) Aircraft type, registration and operator; (b) Point of origin and destination; (c) ETA and ETD Jersey. All visiting general aviation, private charter, corporate or military aircraft require a handling agent. The handling agent will provide customs, immigration and handling facilities including the collection of landing fees. Visiting general aviation, with a MTOW of less than 3000 KG operating via the Jersey Aero Club require handling by Jersey Aero Club and will be parked on the grass area north east of the Aero Club Apron/Hangar. Handling must be pre-booked with Jersey Aero Club, Email: info@jerseyaeroclub.com or Tel: +44 (0)1534-743990. Visiting general/corporate aviation aircraft with a MTOW of 3000 KG or more and all Military aircraft will normally be handled by Gama Aviation. Aircraft between 3000 KG and 45500 KG will normally be parked on the Gama Apron. Non-military aircraft with a MTOW more than 45500 KG will normally be parked on Stands 15-19 (nose in). Military aircraft will normally be parked on the Eastern Apron or Stands 20-23. Visiting Very Light Jet (VLJ) aircraft will normally be handled by Gama Aviation regardless of MTOW. Handling must be pre-booked with Gama Aviation. Tel: +44 (0)1534-496496.

EGJJ AD 2.5 PASSENGER FACILITIES

1	Hotels	None.
2	Restaurants	Restaurant and buffet.
3	Transportation	Buses, coaches and taxis.
4	Medical facilities	Limited first aid treatment.
5	Bank and Post Office	Cash Points in terminal.
6	Tourist Office	Tel: 01534-859000. URL: www.jersey.com
7	Remarks	-

EGJJ AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A6 Contact: Tel: +44 (0)1534-446061. RFF Category 5: 0600-0650 (0500-0550) for prior arranged freight aircraft only. RFF Category 7: 0700-2100 (0600-2030) Available by arrangement. 12 hours prior notice required. RFF Category - determined by aircraft type: 2100-0600 (2030-0500).
2	Rescue equipment	Cutting equipment, winches, lifting and forcing bags.
3	Capability for removal of disabled aircraft	Limited to private and light commercial aircraft utilising airport resources. Large aircraft can be removed using external resources in conjunction with aircraft operator.
4	Remarks	-

EGJJ AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Ploughs, Brushes, De-Icer (Killfrost, Safegrip Eco2).
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Latest information from: ATC Supervisor +44(0)1534-446086. Jersey Airport's policy on clearing a contaminated runway will be to clear back to blacktop and to maintain a GRF runway classification code of at least 5,5,5 for runway operations.

EGJJ AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	EASTERN APRON Surface: Concrete PCR 260/R/D/W/T NORTH APRON Surface: Concrete PCR 810/R/C/W/T SOUTH APRON Surface: Concrete PCR 670/R/B/W/T
2	Taxiway width, surface and strength	Taxiway A (A1 TO A4): 23 M Surface: Concrete PCR 630/R/C/W/T Taxiway A (A4 TO A5): 23 M Surface: Concrete PCR 490/R/C/W/T Taxiway A (RWY TO A1): 23 M Surface: Concrete PCR 1000/R/C/W/T Taxiway B: 23 M Surface: Concrete PCR 490/R/B/W/T Taxiway D: 23 M Surface: Concrete and asphalt PCR Concrete: 450/R/B/W/T Asphalt: 1580/R/C/W/T Taxiway E: 23 M Surface: Asphalt PCR 310/F/B/X/T Taxiway F RET: 23 M Surface: Asphalt, Grooved PCR 2000/F/B/X/T Taxiway G: 23 M Surface: Concrete PCR 760/R/A/W/T Taxiway J1 - J3: 22.5 M Surface: Concrete PCR 710/R/B/W/T Taxiway J3 - E APRON: - Surface: Concrete PCR 580/R/B/W/T
3	Altimeter checkpoint location and elevation	-
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking Chart.
6	Remarks	-

EGJJ AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Azimuth and Stopping Guidance is provided as follows: Stands 1-13 inclusive: Advanced Visual Docking and Guidance with painted lead-in lines. Stands 15-23: Painted lead-in lines. Stands 1-23: Nose in/pushback system only. Stand 40: Self-manoeuvring. In the event that Azimuth and Stopping Guidance is not available, aircraft must be marshalled on to Stand.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 08/26: Runway designation, runway threshold (08/26), runway centre-line.

		Taxiway marking aid(s): Taxiway/Taxilane: Taxi holding position.
3	Stop bars and runway guard lights (if any)	LED stop bars at all runway holding points. Jersey Airport operates a 'ring of red' policy and runway holding point stop bars are in permanent operation. Stop bars at all intermediate holds are also used to reinforce taxi clearance limits. Blocking stop bars are located on Taxiway Alpha at the intersections of Taxiways Foxtrot and Golf.
4	Other runway protection measures	-
5	Remarks	Two WDI (LGTD): 491233.8258N 0021125.0679W; 491230.7549N 0021201.6186W.

EGJJ AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Channel Islands CTR.
b) All aircraft using Jersey Airport and its facilities are required to have third party liability insurance cover in the sum of at least £1,000,000. Proof of this insurance should be available for inspection at any time whilst the aircraft is at Jersey Airport.
c) If visiting general aviation aircraft are parked on a remote stand, ie: not the Aero Club or Gama Aviation apron, the crew and passengers must remain with their aircraft until transport is provided by the relevant handling agent.

d) All aircrew whilst airside, are required to wear high visibility clothing at all times. Aircrew wearing high visibility clothing must escort passengers (not wearing high visibility clothing) to and from their aircraft. Pilots in charge of aircraft are responsible for ensuring that their crew and passengers comply with these requirements.
e) All flights except for General Aviation and Military aircraft, are subject to prior notification to ACL slot co-ordination. All requests should be made by e-mail to LONACXH@acl-uk.org.
f) Pilots requiring picketing and tying down of their aircraft must contact their handling agent.
g) Pilots who have filed IFR flight plans are requested to contact ATC for their air traffic control clearance 10 minutes prior to requested start.
h) Minimum submission time for ATC flight plan processing is 1 hour. Flight plans shall be addressed as detailed in ENR 1.11 or may be submitted by fax +44(0)1534-446075. Pilots are required to check relevant NOTAM for PPR requirements. Additional guidance and information regarding VFR flight within the Channel Islands CTR can be found online at www.cicz.co.uk.
i) Civilian formation flight under Special VFR is prohibited in the Channel Islands CTR. Civilian VFR formations are not permitted to land or take-off in formation without the express permission of the Airport Director; this may be obtained from Jersey ATC.
j) Commercial and corporate aircraft operators and/or handling agents are required to ensure they have appropriate tow bars/tugs and spare wheels on site for aircraft if they intend to operate at Jersey Airport.
k) Aerodrome Control Service may be provided from the remote tower facility for either contingency or training purposes. When the remote tower is in operation for contingency purposes, aircraft suffering a radio failure should look for light signals from the Fire Station abeam Taxiway Alpha. Times of operation of the remote tower and information regarding the provision of light signals will also be transmitted via ATIS.
l) Aircraft registered in any country other than the United Kingdom and its Territories and Dependencies intending to conduct commercial operations will need to apply for a Foreign Carrier Permit. Application forms are available on the Office of the Director of Civil Aviation for the Channel Islands website https://www.cidca.aero.
m) Aircraft operating on a national airworthiness certificate (Permit to Fly etc) require an exemption issued by the Director of Civil Aviation to operate within Channel Islands Airspace. Application forms are available on the Office of the Director of Civil Aviation for the Channel Islands website https://www.cidca.aero.
n) Single-Engine Turbine (SET) Operations:

i. SET-IMC OPERATIONS – PRIOR APPROVAL REQUIRED

Operators intending to conduct Commercial Air Transport (CAT) operations to/from Jersey using Single-Engine Turbine (SET) aircraft at night or in IMC (SET-IMC) shall obtain prior approval from the Director of Civil Aviation. https://www.cidca.aero.

o) APU usage:

i. The hierarchy for the selection of power supply whilst an aircraft is on stand is as follows:

1. FEGP - to be used whenever supplied and serviceable. (Stands 1-13 have FEGP units fitted, providing either 400Hz or 28V DC).
2. GPU - to be used when FEGP is not supplied, or the unit is unserviceable.
3. APU - only to be used when neither FEGP or GPU is supplied or both units are unserviceable.

ii. Regardless of the availability of external auxiliary power sources, no aircraft is permitted to run an APU for greater than the times stipulated below. (For the avoidance of doubt, the term APU within this policy includes the use of 'Hotel Mode'.)
iii. Operation of the APU.

1. Any use of the APU must be in strict compliance with the hierarchy above.
2. No APU shall be left running unless a qualified person is in attendance.
3. Outside of Airport Opening Hours APUs shall not be run without he prior approval of the Head of Aerodrome Operations.

iv. Departure Procedure: The APU is not to be started more than 15 minutes before STD.
v. Arrival Procedure: The APU should be shut down at the earliest opportunity after arriving on stand, and in any event no longer than 10 minutes after arriving on stand.
vi. Exemptions to the APU Departure and Arrival procedures:

1. When the external temperature is below 5°C or above 20°C, as stated on ATIS, and PCA is not available, restrictions relating to departing aircraft may be extended so that the APU can be started not in excess of 30 minutes before STD.
2. General Aviation aircraft which require additional start-up time for operational reasons, the restriction relating to departing aircraft may be extended so that the APU can be started not more than 30 minutes before STD.

vii. Requests for temporary exemptions to the policy outlined above should be made to Head of Aerodrome Operations on +44 (0)1534-446008.

2 GROUND MOVEMENT

a) ATC are responsible for engine start-up and push-back/taxi clearance.
b) For safety and security reasons, all aircrew must be transported to/from their aircraft by handling agent.
c) Apron Layout:

i. The arrangement of the main apron, pier, aircraft stands and guidance lines are shown on page AD 2-EGJJ-2-2.
ii. Pilots are required to request permission from ATC to 'push-back' from nose-in stands and on initial call should give the location of the aircraft.
iii. The minimum taxilane width between J1 and J3 is 45 M. 22.5 M either side of centre-line.
iv. Stand sizes vary between 49.5 M and 41.5 M long. Stand widths vary between 42 M and 29.2 M.

d) Pilots must exercise caution when manoeuvring due to rutted ground. When the grass is wet, pilots must be extra vigilant because the ground will be soft in places and liable to be slippery. Also during wet conditions, pilots must exercise extreme caution when manoeuvring on the grass at the east end of the Aero Club access track as this area can be very wet and muddy.
e) The (block paved) access track from the east of Holding point Hotel to the grass parking area at the Aero Club has not been formally designated by the Airport Authority as a taxiway. The access track does not comply with the criteria for a taxiway contained in CAP 168. Therefore, the painted centre-line is only provided for assistance and does not offer the usual clearances either side of the access track that would normally be associated with a taxiway. It is most important that pilots exercise caution when using this access track to ensure that they have suitable wing tip clearance on each side.
f) Apron Areas:

i. All areas south of holding point Hotel, south of holding point Mike and east of holding point Juliet 3 have been designated as apron;
ii. The responsibility for the use of, including the suitability of these areas for both the transit and the parking of aircraft remains with the aircraft commander at all times. Any Surface Markings within these areas are for general guidance purposes only and may not conform to international certification standards including taxiway minimum separation distances;
iii. All aircraft wishing to depart from these areas (Gama Aviation, JAL and the Aero Club) must call ATC for start up and taxi clearance;
iv. All aircraft movements remaining wholly within the confines of these designated areas (Gama Aviation, JAL and the Aero Club) may be conducted solely at the commander's discretion, ATC may be contacted for assistance if required.

g) Pilots must exercise caution when approaching Runway 26 holding points. The proximity of Holding Points A1, G and a blocking stop bar may cause confusion. No green centre-line lighting exists on Taxiway Golf.

3 CAT II/III OPERATIONS

a) Jersey Airport is not equipped for CAT II/III operations, however Low Visibility Procedures are used to protect CATI and LTS CATI operations.
b) When ATC notifies Low Visibility Procedures:

i. Taxiway Echo is not available as a runway exit.
ii. Intermediate taxiway stopbars will be used to reinforce taxi clearance limits.
iii. **Runway 08 Arrivals**
Arriving traffic on Runway 08 will vacate the runway via Rapid Exit Taxiway Foxtrot or at the runway end via Taxiway Alpha. Pilots will report Runway vacated after passing the yellow/green section of the taxiway centre-line lighting and will notify ATC of the exit used.
iv. **Runway 26 Arrivals**
Arriving traffic on Runway 26 will vacate the runway at the runway end via Taxiway Bravo and report vacated after passing the yellow/green section of centre-line lighting. Taxiway Delta may be available on request.
v. **Runway 26 Departures**
Departing traffic on Runway 26 should follow the green centre-line lights to Holding Point A1. There are no green centre-line lights on Taxiway Golf.

c) RVR system in use suppress mid-point and/or stop-end values when:

i. They are equal to or higher than the touchdown zone value unless they are less than 400 M; or
ii. They are 800 M or more.

4 WARNINGS

a) Pilots may experience turbulence and variable wind conditions caused by nearby cliffs on final approach and landing on Runway 08. Some directional control difficulties can be experienced in strong crosswinds from the southeast and southwest due to the effects of the wake from the aerodrome buildings. Pilots are also advised that blasting takes place adjacent to the aerodrome at quarries bearing 042°(T), 1.36 NM from the ARP. Blasting operations may take place infrequently Mon-Fri 0730-0745 (0630-0645). At these times turbulence may be experienced in this vicinity particularly by light aircraft.
b) The distance between the centreline of the runway and the centreline of taxiways does not conform to the recommendation of ICAO Annex 14. The distance between the runway and Taxiway Alpha varies from 168 M to 95 M, and between the runway and Taxiway Bravo between 297 M and 101 M.
c) Aircraft taxiing to holding points for either runway may be restricted by aircraft holding at intermediate link taxiways and may not always have sufficient clearance to proceed.
d) Floodlighting of Mount Orgeuil Castle may take place between SS - 2359 (2259). Extraneous light from the floodlight mounted on Gorey Pier, approximately 1.5 miles south of the 'JSY' VOR, shining in a northeasterly direction, may be visible to aircraft where the beam intersects the 26 ILS approach centre-line at a point approximately 9 miles from touchdown. This light may also be visible from various points of the holding pattern of the 'JSY' VOR at low altitudes.
e) Skydiving may take place all year round, except Christmas Day, during airport hours, over St. Aubin's Bay (491141N 0020900W) from surface to FL 110 and exceptionally up to FL 190. Jersey ATC may temporarily re-classify a portion of the Channel Islands TMA (by NOTAM) radius 10 NM centred on Jersey Aerodrome Reference Point as Class D Airspace to permit this activity.
f) Lethal bird control methods including the use of firearms may take place all year round during aerodrome published opening hours.
g) Model Aircraft flying takes place at the Les Landes Model Aerodrome (491500N 0021520W), approximately 2.5 NM NW of ARP up to 400 FT AGL and occasionally up to 1000 FT AGL. ATC will notify pilots of known model aircraft activity above 400 FT AGL which may affect their flights. (This may be via ATIS message).
h) Model Aircraft Glider flying may take place at various coastal locations up to 400 FT AGL.
i) Paraglider and Hang-Glider activity takes place in VMC conditions during daylight hours at designated coastal locations as follows:

i. L'Etacq – Approximately 2.5 NM NW of ARP up to 500 FT QNH.
ii. Plemont – Approximately 3 NM NNW of ARP in the vicinity of the Les Landes Racecourse (VRP) up to 500 FT QNH.

iii. La Pulente – Approximately 2 NM SW of ARP up to 500 FT QNH.
iv. Greve de Lecq – Approximately 2.5 NM N of ARP up to 500 FT QNH.
v. Bonne Nuit – Approximately 3 NM NE of ARP in the vicinity of the Fremont TV Mast (VRP) up to 600 FT QNH.
vi. Bouley Bay – Approximately 4 NM ENE of ARP up to 600 FT QNH.
vii. Noirmont Point – Approximately 2 NM SSE of ARP up to 500 FT QNH.
viii. Portelet – Approximately 2 NM S of ARP up to 500 FT QNH.
ix. La Moye – Approximately 2 NM SSW of ARP up to 500 FT QNH.
x. Gorey – Approximately 6.5 NM E of ARP up to 500 FT QNH.

ATC will notify pilots of known activity within these sites which may affect their flights (This may be via ATIS message).

j) Sites are administered by the Jersey Hang Gliding and Paragliding Club (JHPC). Visiting pilots wishing to use these sites are required to be fully briefed by the JHPC as to the conditions imposed on hang gliding and paragliding operations.
k) Pilots may experience Runway 26 ILS Localiser signal fluctuations due to the proximity of the localiser array to the runway.

5 HELICOPTER OPERATIONS

a) Helicopters are to use the main runway for all arrivals and departures as no specific helicopter landing area exists.
b) Helicopters with a MTOW 1400 KG or less may be handled by the Jersey Aero Club and parked on the grass area at the Aero Club, southwest of Holding Point Hotel, space permitting. Helicopters with a MTOW in excess of 1400 KG must be handled by Gama Aviation and parked on the GAMA or Eastern Apron.
c) Handling must be pre-booked either with the Jersey Aero Club, email: info@jerseyaeroclub.com, Tel: +44 (0)1534-743990 or Gama Aviation. Tel: +44 (0)1534-496496 as appropriate.

6 USE OF RUNWAYS

a) In accordance with EU OPS Subpart E the following approach operations are available to approved operators:

i. Runway 08 suitable for Lower than Standard Category I and Enhanced Vision System (EVS) operations supported by an ILS Classification of I/T/3;
ii. Runway 26 suitable for Lower than Standard Category I and Enhanced Vision System (EVS) operations supported by an ILS Classification of I/T/3.

b) Operators shall inform ATC when they intend to fly a Lower Than Standard Category I or EVS approach in order that the required safeguarding can be ensured. Practice Lower Than Standard Category I or EVS approaches will not be afforded safeguarding;
c) Operators attention is drawn to the likelihood that the local terrain on final approach to both Runway 26 and Runway 08 is considered to be challenging for radio altimeters and auto-land procedures.
d) Landing aircraft vacating Runway 26 via Taxiway Bravo should endeavour to keep the aircraft in continuous motion until passing Bravo 1 to reduce the likelihood of localiser signal fluctuations for subsequent traffic.
e) When back tracking is necessary, aircraft greater than 28,000 KG MTOW should make all turns greater than 90 degrees on the concrete runway ends only.

7 TRAINING

a) All flight training MUST be booked in advance with the Jersey ATC Supervisor. Tel +44 (0)1534-446086. Submission of a FPL does not constitute a request for training.
b) Military flight training restricted to between 0900-1900 (0800-1800).

8 Operation of Advanced Surveillance System

a) To cooperate with the Mode-S based Advanced Surveillance System, aircraft operators intending to use Jersey airport should ensure that the Mode S transponder is able to operate when the aircraft is on the ground.
b) Pilots shall:

i. Select AUTO mode and the assigned Mode A code.
ii. If AUTO mode is not available, select ON (e.g. XPDR) and the assigned Mode A code:

- From the request for towed push-back or taxi, whichever is earlier.
- After landing, continuously until the aircraft is fully parked in its stand.
- When the aircraft is fully parked, they shall select standby.

c) Whenever the aircraft is capable of reporting Aircraft Identification (i.e. call sign used in flight), this should be entered (through the FMS or the Transponder Control Panel) at the time of the request for towed push-back or taxi, whichever is earlier.
d) Air crew must use the ICAO defined format to enter the Aircraft Identification.
e) To ensure that the performance of systems based on SSR frequencies (including airborne TCAS units and SSR radars) is not compromised, TCAS should not be selected before receiving clearance to line up and should be deselected after vacating the runway.

EGJJ AD 2.21 NOISE ABATEMENT PROCEDURES

a) The following Noise Preferential Routeings and Procedures will apply to all aircraft taking off, landing or going around from this airport and will apply in both VMC and IMC unless otherwise instructed by ATC.

b) Propeller Driven Aircraft and Helicopters:

i. Runway 26 – Take-off – VFR/SVFR - Climb straight ahead to a minimum of 800 FT AMSL (523 FT AAL) before turning and climb as rapidly as is compatible with safety to not less than 1000 FT AMSL (723 FT AAL).
ii. Runway 26 – Take-off – IFR - Climb straight ahead to a minimum of 900 FT AMSL (623 FT AAL) before turning.
iii. Runway 26 – Landing – Maintain at least 1300 FT AMSL (1023 FT AAL) until intercepting the ILS glidepath or PAPI indication and thereafter descend on the facility. If under 5700 KG and making a visual approach, land must not be overflown below 800 FT AMSL (523 FT AAL) until on final approach.
iv. Runway 08 – Take-off – VFR/SVFR - Climb straight ahead to a minimum of 800 FT AMSL (523 FT AAL) before turning and climb as rapidly as is compatible with safety to not less than 1000 FT AMSL (723 FT AAL).
v. Runway 08 – Take-off – IFR - Climb straight ahead to a minimum of 900 FT AMSL (623 FT AAL) before turning.
vi. Runway 08 – Landing – Maintain at least 1300 FT AMSL (1023 FT AAL) until intercepting the ILS glidepath or PAPI indication and thereafter descend on the facility. If under 5700 KG and making a visual approach, land must not be overflown below 800 FT AMSL (523 FT AAL) until on final approach.
vii. Wherever possible pilots should avoid overflying the island below 1000 FT AGL.
viii. Circuit Altitude - Whenever cloud base permits, aircraft should maintain the following altitudes and make the majority of the circuit over the sea:

- Standard circuit altitude for propeller driven aircraft is 1300 FT AMSL (1023 FT AAL).
- Standard circuit altitude for turbo-jet aircraft is 1800 FT AMSL (1523 FT AAL).

c) Turbo-Jet Aircraft:

The Noise Abatement Zone for turbo-jet aircraft covers the whole island and extends for 5 NM beyond the coastline. Noise technique reduced power should be maintained until clear of the Noise Abatement Zone.

i. Runway 26 – Take-off – Climb straight ahead to a minimum of 1800 FT AMSL (1523 FT AAL) before turning.
ii. Runway 26 – Landing – Maintain 1800 FT AMSL (1523 FT AAL) until intercepting the ILS glidepath or PAPI indication and thereafter descend on the facility.
iii. Runway 08 – Take-off – Climb straight ahead to a minimum of 1800 FT AMSL (1523 FT AAL) before turning.
iv. Runway 08 – Landing – Maintain 1600 FT AMSL (1323 FT AAL) until intercepting the ILS glidepath or PAPI indication and thereafter descend on the facility.

d) The Noise Preferential Routeings and Procedures are supplementary to the noise abatement take-off techniques as used by piston-engined, turbo-prop and turbo-jet aircraft.
e) All aircraft departing from Runway 26 at Jersey and routeing to the south of the airport under VFR, must climb straight ahead to 800 FT AMSL (523 FT AAL) before turning left and must route via Corbiere lighthouse (4911N 00215W). Thereafter as much of the flight as practicable must be conducted over the sea.
f) Chapter two aircraft are not permitted to use Jersey Airport unless the operator has specific prior permission from the Airport Authority.
g) The use of this airport outside published hours will be subject to the approval of the Airport Authority.
h) Testing of pure jet engines will not be permitted outside of normal hours without the prior permission of the Airport Authority, Tel: 07797-718688.
i) Any pure jet aircraft using this airport shall, except in extenuating circumstances, satisfy the airport authority that the type of aircraft to be flown into and out of this airport shall be operated in a manner calculated to cause the minimum disturbance practicable.
j) Every pure jet aircraft using this airport shall, after take-off, be operated in such a way that it will not cause more than 110 PNdB by day (day is defined as 0700-2230 (0600-2130) for this purpose) or 102 PNdB by night (night is defined as 2230-0700 (2130-0600) for this purpose).
k) Every pure jet aircraft using the airport shall after take-off maintain, a rate of climb of at least 500 FT per minute, at power settings which will ensure progressively decreasing noise levels at points on the ground under the flight path beyond the monitoring point.
l) Continuous Descent Approaches

i. Turbojet and turbo-prop aircraft are expected to apply continuous descent, low power, low drag approach techniques at all times.
ii. Aircraft are to maintain as high an altitude as practical and adopt a low power, low drag, continuous descent approach profile. The objective will be to fly the optimum descent profile employing minimum engine thrust, ideally from top of descent and in a low drag configuration, prior to the final approach fix.
iii. ATC will provide an estimated track distance from touchdown as soon as practicable for aircraft which are not on or have been removed from a STAR, to allow pilots to descend at a rate they judge best suited to achieve continuous descent approach profile without using more power or drag than necessary.
iv. Pilots who require additional track mileage to facilitate a successful continuous descent approach should inform ATC as soon as possible.

m) These requirements may at any time be departed from to the extent necessary for avoiding immediate danger.

EGJJ AD 2.22 FLIGHT PROCEDURES

1 CARRIAGE AND OPERATION OF SSR TRANSPONDERS

a) The carriage and operation of SSR transponder equipment with the minimum following capability is mandatory when flying within the Channel Islands CTR, CTA or TMA:

i. When operating as a VFR or Special VFR Flight - Mode A 4096 codes;
ii. when operating under IFR - Mode A 4096 codes and Mode C with altitude reporting capability.

b) Exemptions from the requirements may be given in the following circumstances:

i. For notified agreed events such as air rallies, etc. applications for exemption must be made in writing to the Manager Air Traffic Control - Air Traffic Control, Jersey Airport, Channel Islands, (email atcsupervisor@ports.je) at least one calendar month before the event;
ii. For short notice exemptions, applications must be made to the Watch Supervisor, Jersey Airport (+44 (0)1534-446086) giving full details. Such exemptions will not normally be granted unless it is considered that exceptional circumstances exist.

c) Transponder operating procedures are detailed at ENR 1.6, section 2 inclusive of procedures to be followed in the event of transponder failure.

2 RADAR SERVICE

a) Jersey ATC provides Radar Control Service to all aircraft within the Channel Islands CTR, CTA and TMA.

3 RADIO COMMUNICATION FAILURE PROCEDURES

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1.

4 ADJACENT FIRS

a) The attention of pilots proceeding to or from the Channel Islands CTR, CTA or TMA via the adjacent FIRs of London and Brest is drawn to the differences in the regulations of those regions relating to IFR/VFR Flights.

5 PROCEDURES FOR INBOUND AIRCRAFT

a) The standard routes for IFR aircraft inbound to Jersey are at AD 2-EGJJ-7-1/2 these however, may be varied at the discretion of ATC.

6 VFR FLIGHT

a) A flight plan must be filed for all flights within and intending to transit the Channel Islands CTR.
b) VFR clearance to operate within the Jersey ATZ will not be granted to aircraft if the reported visibility is less than 5 KM or the reported cloud ceiling is less than 1500 FT in accordance with Standardised European Rules of the Air SERA.5001.
c) Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
d) Pilots flying VFR or Special VFR between Jersey and the UK South Coast (Bournemouth, Southampton, Isle of Wight areas), should expect to route via Cap de La Hague (VRP) on the French Coast. Pilots should exercise caution with regard to the Prohibited Areas at Cap Flamanville and Cap de La Hague.
e) Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
f) VFR Flights may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

7 SPECIAL VFR FLIGHT

a) Prior Permission

i. A flight plan must be filed for all Special VFR flights in the Channel Islands CTR.
ii. Special VFR clearances for flights within the Channel Islands CTR may be requested and will be given whenever traffic conditions permit. These flights are subject to the general conditions laid down for Special VFR Flights in SERA.5010.
iii. The use of Special VFR clearances is intended to be limited to light aircraft which cannot comply with full IFR requirements and wish to proceed to or from an aerodrome within, or to transit the Channel Islands CTR.

b) Special Routes

i. Aircraft operating in accordance with Special VFR will normally be cleared via the published VRPs or on tracks to/from adjacent aerodromes or navigation aids, or as per flight planned route.
ii. Special VFR may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

c) Weather Minima

i. Aircraft shall be given a radar service whilst within the Channel Islands CTR. It is the responsibility of the pilot to remain at all times clear of cloud and in sight of the surface. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
ii. Special VFR clearance to operate within the Jersey ATZ will not be granted to a fixed wing aircraft if the reported visibility is less than 1500 M or the reported cloud ceiling is less than 600 FT.

iii. Special VFR clearance to operate within the Jersey ATZ for the purpose of proceeding to or from Jersey Airport will not be granted to a helicopter if the reported visibility is less than 800 M or the reported cloud ceiling is less than 600 FT.

d) Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
e) The Channel Island Director of Civil Aviation has approved the issue of Special VFR clearances at night.

8 SARK RESTRICTED AREA

a) Pilots are to note that flight is not permitted at a height of less than 2000 FT AGL within 3 NM of 492546N 0022145W on the Island of Sark (EGR095) except with the permission of the Channel Islands Director of Civil Aviation or from Guernsey ATC as necessary.

9 VISUAL CIRCUIT PROCEDURES

a) Compliance with the Noise Abatement Requirements at AD 2.21.
b) All circuits will be to the south of the aerodrome unless advised by ATC.
c) Wherever possible the majority of the circuit shall be carried out over the sea.
d) Standard circuit altitude for propeller driven aircraft is 1300 FT AMSL (1023 FT AAL).
e) Standard circuit altitude for turbo-jet aircraft is 1800 FT AMSL (1523 FT AAL).
f) Visual circuits will not be permitted when the cloud ceiling is lower than 600 FT AAL.

10 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

11 PROCEDURES OUTSIDE THE CHANNEL ISLANDS CONTROL ZONE

a) Pilots operating outside of Channel Islands Airspace who are in contact with Jersey ATSU will be provided with an Alerting Service.
b) Pilots are reminded that aircraft in transit to or from Channel Islands Airspace may not be flying in accordance with the semi-circular rule.
c) For transit of the Plymouth/Portland Danger Areas to the north of Channel Islands Airspace, a SUACS may be available as detailed in ENR 5.1 of the UK AIP.
d) Arriving flights should make contact with Jersey ATC at least 10 minutes prior to reaching the boundary of Channel Islands Airspace to obtain a clearance to enter CAS.
e) Pilots are reminded that airspace to the north of N50° (London FIR) is subject to London ACC, and airspace to the south (Brest FIR) is subject to Rennes Approach/Info or Iroise Approach. It is the responsibility of pilots to acquaint themselves with the requirements of the respective UK and French authorities.

12 OMNIDIRECTIONAL DEPARTURES

a) Only available with ATC clearance.

Omnidirectional Departures		
Runway	**Description**	**Restrictions**
08	Climb straight ahead on track 083° M to 900 FT AMSL (623 FT AAL), then turn on track climbing to en-route safety altitude or in accordance with ATC Clearance. PDG 3.3%	Close-in obstacles exist. See Aerodrome Obstacle Chart and EGJJ AD 2.10 Aerodrome Obstacles. This procedure does not take account of noise abatement procedures which may require climb to a higher level. See EGJJ AD 2.21 for Noise Abatement Procedures.
26	Climb straight ahead on track 263° M to 900 FT AMSL (623 FT AAL), then turn on track climbing to en-route safety altitude or in accordance with ATC Clearance. PDG 3.3%	Close-in obstacles exist. See Aerodrome Obstacle Chart and EGJJ AD 2.10 Aerodrome Obstacles. This procedure does not take account of noise abatement procedures which may require climb to a higher level. See EGJJ AD 2.21 for Noise Abatement Procedures.

13 FLIGHT PLANS

a) See ENR 1.10 for flight planning procedures.
b) See ENR 1.11 for flight plan addressing requirements.
c) Flight plans may be submitted on form CA48 via fax to Jersey ATC +44(0)1534-446075.

CHANNEL ISLANDS CONTROL ZONE - VISUAL REFERENCE POINTS (VRPs) JERSEY

ATS AIRSPACE VERTICAL LIMITS
Controlled airspace with an upper vertical limit of FL195 and above is not shown.

LATERAL LIMITS
Detailed description of FIR, UIR, CTA and TMA see ENR 2.1. Detailed description of air traffic services airspace organized at the aerodrome see AD 2.17.

GENERAL INFORMATION
* Outside Jersey notified hours and within Brest FIR. The airspace adopts the classification appropriate to Airway or uncontrolled airspace designation, as appropriate, as detailed in the France AIP.
† Outside Jersey notified hours and within London FIR, CTR, CTA-1 and TMA revert to Class G.
‡ **LF D18 A5** SFC-FL95, except for within CHANNEL ISLANDS CTA-1 South and TMA South when active.

CHANGE (2/25): RECOMMENDED VFR ROUTE REMOVED. CHART RESCALED AND UPDATED.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 812
HEIGHTS IN FEET AGL (464)

JERSEY

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **1500** in the sector defined by the lateral limits; 491946N 0022052W - 492102N 0020541W thence clockwise by an arc of a circle radius 8NM centred on 491306N 0020410W to 490510N 0020239W - 490355N 0021745W thence clockwise by an arc of a circle radius 8NM centred on 491151N 0021918W to 491946N 0022052W, except;

b) **1800** in the sector defined by the lateral limits; 491801N 0020647W - 491749N 0020514W thence clockwise by an arc of circle radius 3.1NM centred on 491446N 0020604W to 491152N 0020747W - 491217N 0020926W thence clockwise by an arc of circle radius 3NM centred on 491506N 0020752W to 491801N 0020647W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **JW NDB(L)** for RWY 08 approaches or **VOR JSY** for RWY 26 approaches†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **JW NDB(L)** for RWY 08 approaches or **VOR JSY** for RWY 26 approaches†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the SMAA ensure terrain clearance in accordance with Rule 36 (SERA.5015) of the Air Navigation (Rules of the Air) (Jersey) Regulations 2017 for obstacles within the SMAA.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **The chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be issued if the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (13/25): MAG INFO REVISED.

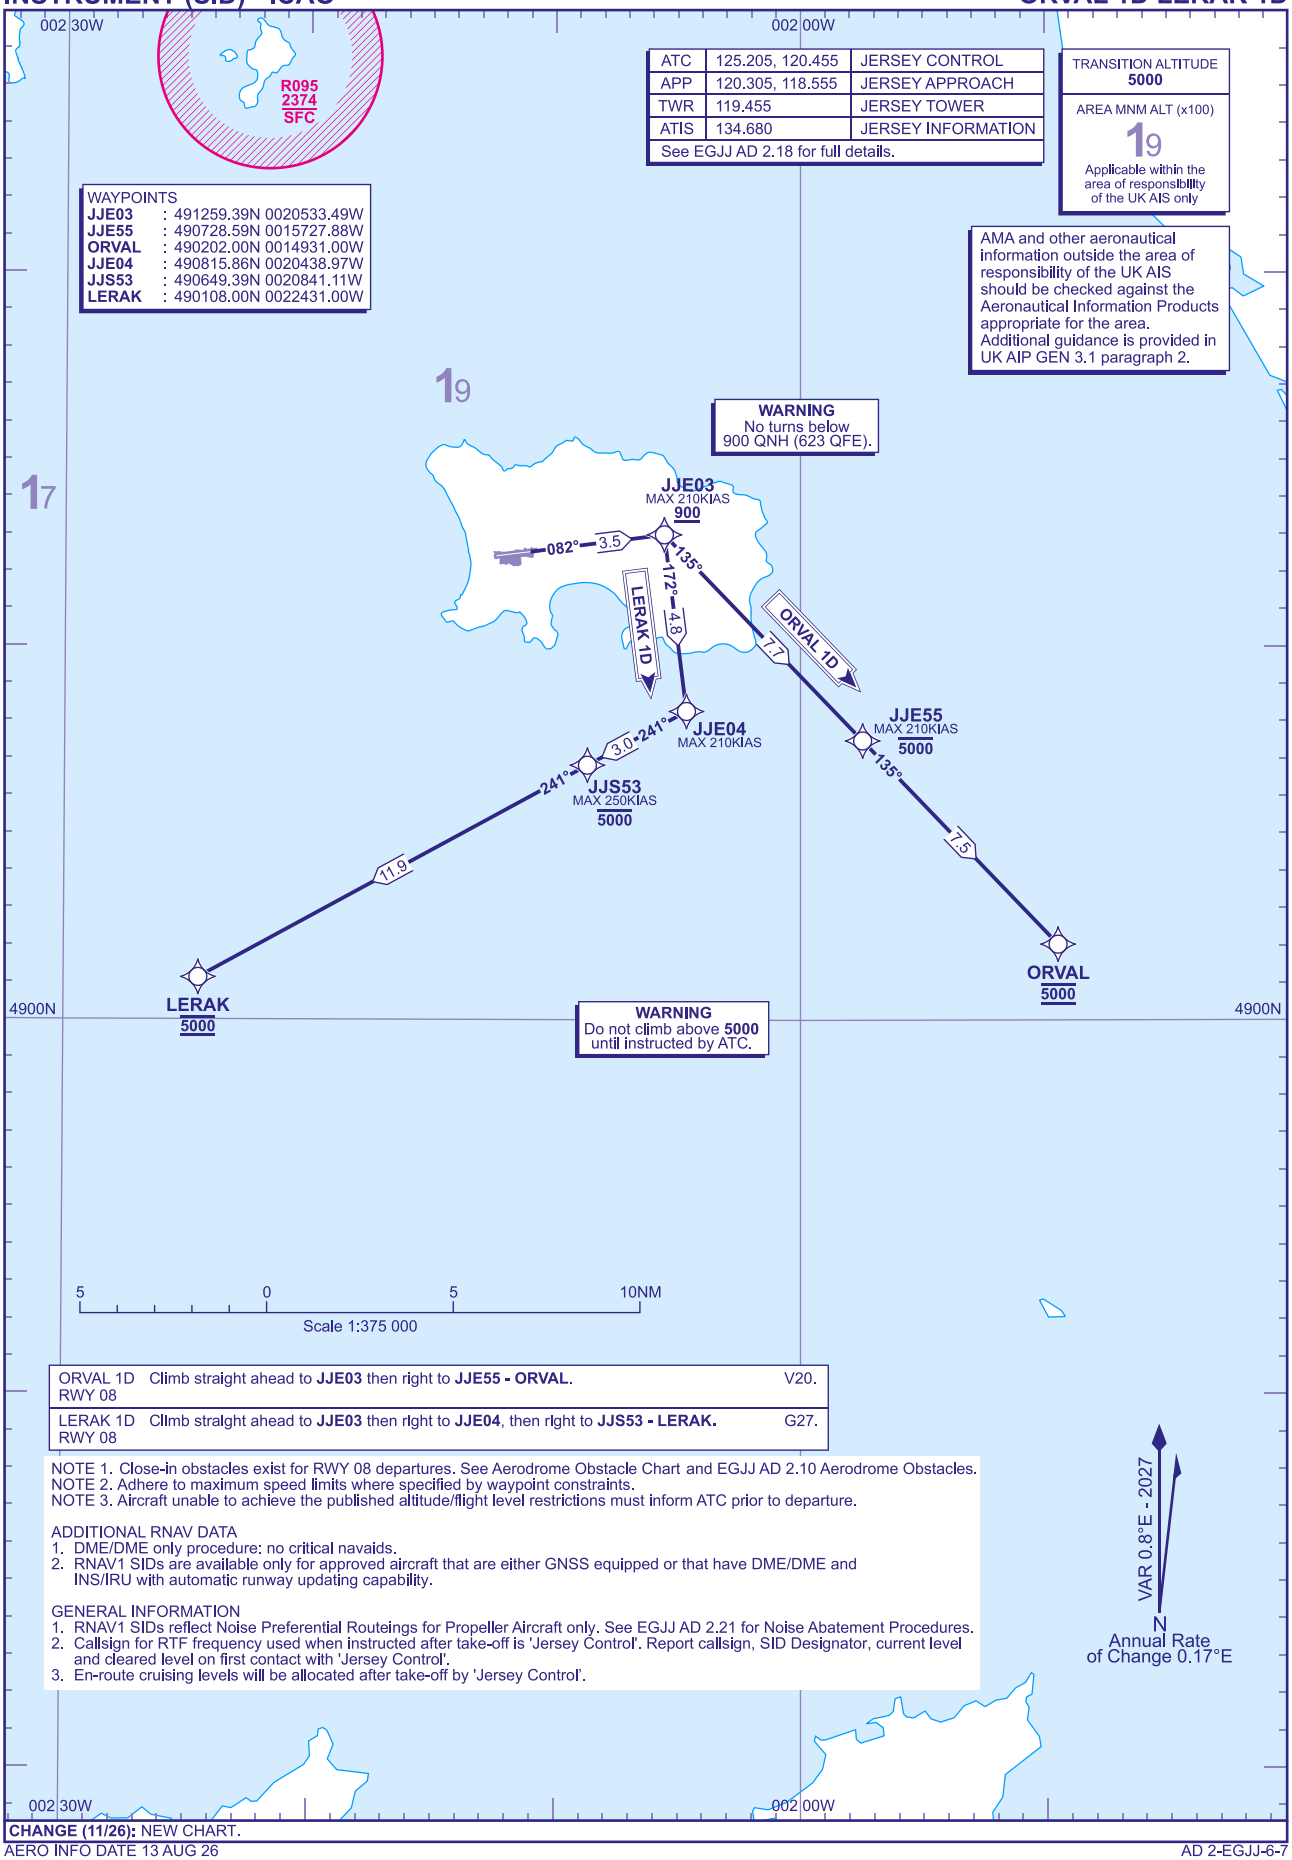
SKERY 1D RWY 08	Climb straight ahead to **JJE03** then left to **JJE05**, then left to **JJN53 - SKERY**.	L22, N864.
TUNIT 1D RWY 08	Climb straight ahead to **JJE03** then right to **JJE04**, then right to **JJS54 - BAGIN**, then right to **TUNIT.**	N160.

NOTE 1. Close-in obstacles exist for RWY 08 departures. See Aerodrome Obstacle Chart and EGJJ AD 2.10 Aerodrome Obstacles.
NOTE 2. Adhere to maximum speed limits where specified by waypoint constraints.
NOTE 3. Aircraft unable to achieve the published altitude/flight level restrictions must inform ATC prior to departure.

ADDITIONAL RNAV DATA
1. DME/DME only procedure: no critical navaids.
2. RNAV1 SIDs are available only for approved aircraft that are either GNSS equipped or that have DME/DME and INS/IRU with automatic runway updating capability.



GENERAL INFORMATION
1. RNAV1 SIDs reflect Noise Preferential Routeings for Propeller Aircraft only. See EGJJ AD 2.21 for Noise Abatement Procedures.
2. Callsign for RTF frequency used when instructed after take-off is 'Jersey Control'. Report callsign, SID Designator, current level and cleared level on first contact with 'Jersey Control'.
3. En-route cruising levels will be allocated after take-off by 'Jersey Control'.
4. **LF D18 A5** SFC-FL95, except for within CHANNEL ISLANDS CTA-1 (South) and TMA (South) when active.

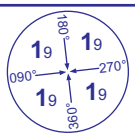
JSY to MAPt	MIN:SEC	2:03	2:21	2:45	3:18	4:07

ALTERNATIVE PROCEDURE EXTENDED HOLDING PATTERN (MAX 185KIAS)
From overhead IAF VOR JSY at **3000**. Extend the outbound leg of the holding pattern descending to **2000**(1728). At JSY D4 (CAT A,B); JSY D4.5 (CAT C,D) turn left onto the FAT, when established, continue as for main procedure.

AIRCRAFT UNABLE TO RECEIVE DME JSY
MAIN PROCEDURE: Fly outbound for 1.5MIN (CAT A,B); 1MIN (CAT C,D) prior to base turn.
ALTERNATIVE PROCEDURE: Extend outbound leg for 1.5MIN prior to base turn descending to **2000**(1728).
When established continue as for main procedure.



CHANGE (2/26): JERSEY CONTROL (SECONDARY) FREQUENCY.

EGBP AD 2.19 RADIO NAVIGATION AND LANDING AIDS

INTENTIONALLY BLANK

EGBP AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Special procedures are in force for some flying events, details as published by AIC and NOTAM.
b) Non-Radio aircraft not accepted.
c) While airside each aircraft commander is responsible for the safety of his passengers and other crew members. Passengers are at all times to be escorted by the aircraft commander or crew member who is known to be competent to ensure his/her and the passengers safety. The wearing of high visibility clothing is mandatory.
d) Aircraft commanders or crew members, as applicable, are responsible for ensuring that a total ban on smoking whilst airside is observed.
e) Aerodrome is not available when closed/out of published hours, to aircraft without a valid out of hours indemnity form.

2 GROUND MOVEMENT

a) Vehicles cross the runway at 08 threshold under traffic light control during aerodrome operating hours.
b) Taxiway Alpha between A1-A2 and Taxiway Charlie may be closed at any time. Essential aerodrome information will be provided by Kemble AFIS.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Be aware of proximity of Aston Down gliding centre 4 NM NW, winch launching to 3000 FT AGL. Avoid South Cerney to the east, it is regularly active up to FL 120 with para dropping.
b) High performance aircraft occasionally carry out non-standard manoeuvres.
c) Windshear or turbulence may be experienced on final approach to Runway 26 in strong southerly or north westerly winds.
d) Grass areas, including grass runway 08/26 and golf taxiway, are subject to restricted use or closure due to waterlogging and subsequent soak away, during and following periods of wet weather.
e) During moderate/heavy rain, standing water forms at the runway edge on the start of Taxiway Delta. This may take up to 48 hours to drain.
f) Model flying operates from the south west corner of the aerodrome, position 513948.10N 0020349.60W, up to 200 FT and occasionally up to 400 FT, during daylight hours up to 2000 HR.

g) Kemble is a protected aerodrome and is situated within an FRZ/RPZ.

5 HELICOPTER OPERATIONS

a) All rotary traffic to call for engine/rotor start.
b) Helicopters may operate south of Runway 08/26 (asphalt) for training up to 700 FT AAL, inside the fixed wing circuit.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

a) All circuit training strictly PPR.

EGBP AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots should avoid overflying the villages and hamlets of Kemble, Kemble Wick, Rodmarton, Culkerton, Ashley and Chelworth, wherever possible.
b) Contact Kemble Operations for detailed noise abatement procedures.

EGBP AD 2.22 FLIGHT PROCEDURES

1 CIRCUITS

a) Circuit Heights: Jet circuit 1500 FT AAL. Fixed-wing 1000 FT AAL.
b) The standard circuit patterns are Right hand Runway 08 and Left hand on Runway 26.
c) All fixed wing GA traffic to join overhead.

2 IFR DEPARTURES JOINING AIRWAYS

a) Aircraft departing Kemble IFR to the east or west should plan to join controlled airspace at CONKO.

Note: *KENET and CPT flight plans can all expect a CONKO join.*

b) Aircraft departing Kemble IFR to the north east should plan to join controlled airspace at either DAVENTRY (DTY) or HONILEY (HON).
c) Aircraft departing Kemble IFR to the north west should plan to join controlled airspace at KISWO.

3 INSTRUMENT APPROACH PROCEDURES

a) IAPs at Cotswold/Kemble are established outside CAS.
b) There may be other airspace activity not known to Cotswold/Kemble within RAF Brize Norton's CAS and within Class G in VMC and IMC.
c) All IAPs must have a pre-booked approach time slot from Cotswold Airport's Ops on 01285-771177.
d) All IAP slot timings must be adhered to, in order to maintain separation.
e) For a BUSVE IAF join, a CAS zone transit is required from RAF Brize Norton ATC on 119.005.
f) RAF Brize Norton will not provide an approach service for aircraft arriving at Kemble.

EGPA AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Flying by aircraft not requiring a licensed aerodrome may be permitted by the licensee and may occur in daylight hours only, outside of published hours. Pilots must comply with the HIAL out of hours indemnity scheme. Details of the scheme and an application form are available from the HIAL website.
b) All personnel operating on the manouevring area must wear high visibility clothing.
c) The main apron is subject to security restrictions and searches.
d) Use of Kirkwall aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.
e) Aircraft operators are responsible for the searching of any aircraft parked either overnight or within the demarcated areas prior to departure.

2 GROUND MOVEMENT

a) Taxiway E from E1 to Runway 27 is available for day use only by aircraft of less than 11 tonnes MAUW with an outer main gear wheel span less than 6 M and/or wingspan/rotor disc less than 18 M.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) Grass areas outside strip are unfit for transit of aircraft because of open drains. Aerodrome is subject to water-logging.
b) Grass areas are soft and unsafe. Poor load bearing characteristics may be found on the runway/taxiway strips and the area adjacent to the apron. Only marked taxiway to be used.
c) A section 549 M in length, on Runway 14/32, commencing at the Southeast end of the runway, has a down gradient of 1 in 50 (1. 1°).
d) Severe turbulence and occasionally windshear may be encountered on final approach to Runway 27 below 400 FT during periods of strong winds from between the southwest and northwest.
e) A public road passes under the take-off and climb paths of Runway 27. A height allowance of 15 FT to clear a vehicle on this road must be applied to performance calculations for departures from these runways.
f) Security post 3 M high at the apron edge adjacent to passenger gates. Pilots of aircraft not receiving marshalling assistance should exercise caution when taxiing or parking in front of the terminal.
g) Birds, including geese, may be encountered on the Runway 09 and 27 approaches and climb-outs.

5 HELICOPTER OPERATIONS

a) Direct departures from the small apron, taxiways or grass areas can be permitted at pilot's own discretion. Overflying the aprons, aerodrome buildings and parked aircraft is to be avoided.
b) Hot refuelling may be permitted on the main apron subject to PPR.

6 USE OF RUNWAYS

a) Runway 09/27

   i. Except where an AOC holder has a less restrictive state-authorised take-off minima, Runway 09/27 departures are not permitted when the reported MET visibility is 400 M or less.

b) Runway 14/32

   i. Except where an AOC holder has a less restrictive state-authorised take-off minima, Runway 14/32 departures are not permitted when the reported MET visibility is 800 M or less.
   ii. Runway 14/32 is not available for take-off and landing at night.
   iii. During apron congestion, Runway 14/32 may become unavailable at short notice due to infringing aircraft parked on the main apron or on the Runway 32 undershoot (between R5 and E1).

7 TRAINING

a) Training flights are by prior arrangement only and are subject to approval from ATC.

EGPA AD 2.21 NOISE ABATEMENT PROCEDURES

a) Pilots of jet aircraft are required to avoid overflying Kirkwall town.

EGPA AD 2.22 FLIGHT PROCEDURES

1 INSTRUMENT APPROACH PROCEDURES

a) Instrument Approach Procedures (IAP) for this aerodrome are established outside controlled airspace. See ENR 1.5.

2 NORTH ATLANTIC DEPARTURES

a) Due to the proximity of the Shanwick Oceanic boundary to Kirkwall, pilots must consider timescales for submitting an 'RCL'. Refer to ENR 2.2, paragraph 3.8.2 for details.

3 UK FLIGHT INFORMATION SERVICES

a) During notified ATC hours of service:

i. A Procedural ATS will be routinely applied to IFR flights. Pilots will be expected to accept levels, radials, tracks and/or time allocations that may require flight in IMC, to achieve planned deconfliction minima from other aircraft being provided with a Procedural ATS;
ii. Pilots must use conventional navigational aids when receiving a Procedural ATS that includes deconfliction from other traffic, and not use FMS overlays for the purpose;
iii. A Basic ATS will be applied to VFR flights. Agreements may be requested which restrict aircraft to a specific level, level band, heading, route, or operating area for the purposes of co-ordination and/or to facilitate the safe use of airspace; and
iv. A pilot may request another ATS if considered more appropriate.

b) Outside notified ATC hours of service:

i. A Basic ATS will be applied to SAR and ambulance flight by an AFISO.

4 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.
b) All Kirkwall VRPs are suitable for daytime use only due to lack of conspicuity at night.

RECOMMENDED PROFILE GLIDE PATH 3.5°, 370FT/NM

DME I-ORK(KWL)	5(5.5)	4(4.5)	3(3.5)	2(2.5)	1(1.5)
ALT(HGT)	**1920**(1881)	**1560**(1521)	**1190**(1151)	**820**(781)	**460**(421)

Arrival **not below MSA**.

Climb straight ahead. At **1500** or, **I-ORK** DME 3 (**KWL** DME 3.2) whichever is later, climbing turn left to return to **VOR KWL** at **2600** or as directed.

Note: Pilots should take account of the climb performance of their aircraft to arrange their flight to reach **VOR KWL** at **2600**.

DME I-ORK zero ranged to THR RWY 09
*(**DME KWL** reads 0.5NM at THR RWY 09)*

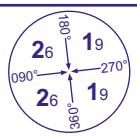
Aircraft Category		**A**	**B**	**C**
OCA (OCH)	**CAT I**	**184**(145)	**193**(154)	**202**(163)
VM(C)OCA (OCH AAL)	**Total Area**	**650**(592)	**660**(602)	**1250**(1192)
	South of RWY 09/27	**650**(592)	**660**(602)	**760**(702)

Rate of descent						
G/S KT	160	140	120	100	80
FT/MIN	990	870	740	620	500

ALTERNATIVE PROCEDURE
Arrival **not below MSA**. Overhead VOR/DME KWL (IAF) at **2600** turn to establish on the outbound leg of the holding pattern. Extend the outbound leg of the hold descending to **2400**. At I-ORK DME 8.5 (KWL DME 9) (CAT A,B) or I-ORK DME 9.5 (KWL DME 10) (CAT C) turn right to establish on the localizer; when established continue as for basic procedure.

ENTRY TO BASE TURN PROCEDURE AFTER HOLDING
If required, the Base Turn procedure may be entered after holding by flying a teardrop reversal manouevre from overhead the holding facility after flying inbound in the hold as follows: Fly outbound on track 101°M (CAT A,B) or 121°M (CAT C) for 1 MIN then turn left to return to the overhead to enter the base turn procedure. Lowest altitude to commence procedure from the hold is **2600**.

NOTE NDB KW may be used in lieu of VOR KWL.



CHANGE (9/26): MAG VAR. MAG TRACKS.
