△ WICK VOR/DME (WIK)	582731.74N 0030601.34W		-			Intersection with Y904.
(RNAV 5)	012°/193°	30.8 NM	FL 195 / FL 75	odd FL 190 / FL 90	even FL 180 / FL 80	Class E and TMZ. Scottish ACC Freq: 134.850 (All Levels).
△ KOKAL	585734.82N 0025338.21W		-			Extremity of N560.

Route Remarks:
Transponder carriage and operation required within that part of N560 notified as Class E and TMZ.

Inverness Radar provide a radar service for tfc inbound to and outbound from Inverness via N560 during the promulgated hours of Inverness Radar as published in UK AIP AD 2.EGPE AD 2.18 (and as amended by NOTAM).

Due to ATC operational requirements, the cruising level allocation between RIMOL and BONBY is inappropriate to the MAG Track.

En-route Danger Area EGD703 to the east between RIMOL and WIK.

△ WALLASEY VOR/DME (WAL)	532330.97N 0030804.06W		-			Extremity of N862.

Route Remarks:
SIDHO - SKERY CDR H24.

PACSE - ENHEL below FL 195 only available for flight planning Fri 1700 - Mon 0745 (0645).

PACSE - SIDHO above FL 195 only available for flight planning Mon-Thu 1700-0830 (1700-0730) and Fri (or the day preceding a PH) 1700 to Mon (or the day following a PH) 0830 (0730).

Due to ATC operational requirements, the cruising level allocation between NOKIN and TONQU is inappropriate to the MAG Track.

△ GAVEL	592300.00N 0012421.67W		-			-
(RNAV 5)	007°/187°	7.0 NM	FL 195 / FL 75	odd FL 190 / FL 110	even FL 180 / FL 120	Class E and TMZ. (See Note) Scottish ACC Freq: 134.850 (All Levels).
△ RAVDI	592957.26N 0012242.18W		-			-
(RNAV 5)	007°/187°	3.0 NM	FL 195 / FL 45	odd FL 190 / FL 110	even FL 180 / FL 120	Class E and TMZ. (See Note) Scottish ACC Freq: 134.850 (All Levels).
▲ MOCHA	593255.50N 0012159.47W		-			Acft in communication with Sumburgh ATC must report OHD MOCHA unless otherwise authorized by that Unit.
(RNAV 5)	007°/187°	20.0 NM	FL 195 / FL 45	odd FL 190 / FL 110	even FL 180 / FL 120	Class E and TMZ. (See Note) Within the confines of the Sumburgh CTR/CTA, Y905 assumes the airspace classification of the Sumburgh CTR/ CTA. Scottish ACC Freq: 134.850 (All Levels).
△ WAFIL	595243.00N 0011711.00W		-			Extremity of Y905.

Route Remarks:
Although coverage of SUM VOR meets ICAO criteria, it is nevertheless deficient along the alignment of Y905 at low level in view of the distance btn SUM and PETOX. During commissioning flight inspection ICAO mnm field strength at FL 70 occurred to 90 NM and it is estimated it would occur above approximately FL 100 overhead PETOX. Therefore in line VOR navigation beyond SUM VOR 50D to PETOX may not comply with RNP 5.

Transponder carriage and operation required.

△ STORNOWAY VOR/DME (STN)	581225.02N 0061058.97W		-			Extremity of Y906.

Route Remarks:
Inverness Radar provide a radar service for tfc inbound to and outbound from Inverness via Y906 during the promulgated hours of Inverness Radar as published in UK AIP AD 2.EGPE AD 2.18 (and as amended by NOTAM).

Tfc inbound to Inverness via Y906 has a clearance limit of GARVA, descent clearance will be issued by Scottish ACC to be level by GARVA unless otherwise instructed by ATC. Scottish ACC will instruct tfc when to contact Inverness Radar (122.605), this will normally be at or before 40 NM from RIMOL.

Transponder carriage and operation required.

T9						
△ BEGAS	450000N 0090000W		-			Southbound route only. Extremity of T9.
(RNP 2) CONTINENTAL/ OFFSHORE	- /181°	216.0 NM	FL 660 / FL 290	-	-	Class A. Shanwick Oceanic Freq: HF as assigned. VHF 128.360 (All Levels).
△ LASNO	483554N 0090000W		-			Extremity of T9.

Route Remarks:
FL Series not applicable. Operators should file Even Levels for southbound transits but may be allocated Odd Levels.

Flight Plan: For RNP2 serviceability, qualification and authorisation, file: Field 10a - GRZ; Field 18 - NAV/RNP2. (See UK AIP ENR 2.2 for further details).

Exemption from FANS 1/A Carriage Requirement.

Requirement for ADS-B Out 1090 MHz Carriage.

Requirement for HF and VHF Carriage.

Routine communications are to be conducted with Shanwick Radio via assigned frequencies/channels using HF. 128.360 MHz is reserved for intervention or emergency purposes only and is to be continuously monitored.

Requirements to monitor 121.500 MHz and to broadcast on 121.500 MHz during in-flight contingencies, contained within UK AIP ENR 2.2 remain unchanged.

North Atlantic Strategic Lateral Offset Procedure (SLOP) does not apply to flights operating along T9. Aircraft shall maintain track along the centre-line of this route.

ENR 5 NAVIGATION WARNINGS

ENR 5.1 PROHIBITED, RESTRICTED AND DANGER AREAS

Airspace Restrictions - Manned and Unmanned Aircraft Systems (UAS)

Unless otherwise stated either in the remarks section or associated SI the Navigational restrictions listed below with an identification which starts with "EGD", "EGP" or "EGR" are applicable to **both** manned **and** unmanned aircraft systems. Restrictions listed below with an identification which starts with "EGRnU" are applicable to **Unmanned Aircraft Systems only**, where 'n' denotes a number related to its location.

Unmanned Aircraft Systems (UAS) - Data File

To satisfy the requirement for the provision of a dataset of UAS Airspace Restrictions an electronic file is available by selecting the UAS Airspace Restrictions File (ENR 5.1) link from the list available on the current IAIP website (updated each AIRAC).

EGR1U021A BLACKBUSHE 511738N 0005215W thence clockwise by the arc of a circle radius 2 NM centred on 511926N 0005051W to 511806N 0004829W - 511801N 0004919W - 511758N 0004954W - 511753N 0005038W - 511746N 0005120W - 511738N 0005215W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U021B BLACKBUSHE RWY 07 511815N 0005513W - 511845N 0005530W - 511904N 0005359W thence anti-clockwise by the arc of a circle radius 2 NM centred on 511926N 0005051W to 511834N 0005343W - 511815N 0005513W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U021C BLACKBUSHE RWY 25 512038N 0004631W - 512007N 0004614W - 511949N 0004743W thence anti-clockwise by the arc of a circle radius 2 NM centred on 511926N 0005051W to 512019N 0004800W - 512038N 0004631W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022A WYCOMBE AIR PARK/ BOOKER A circle, 2 NM radius, centred at 513642N 0004830W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022B WYCOMBE AIR PARK/ BOOKER RWY 06 513508N 0005225W - 513536N 0005249W - 513602N 0005131W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513642N 0004830W to 513533N 0005107W - 513508N 0005225W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022C WYCOMBE AIR PARK/ BOOKER RWY 24 513817N 0004434W - 513748N 0004410W - 513723N 0004529W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513642N 0004830W to 513752N 0004553W - 513817N 0004434W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022D WYCOMBE AIR PARK/ BOOKER RWY 06G 513506N 0005218W - 513535N 0005242W - 513559N 0005129W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513642N 0004830W to 513531N 0005104W - 513506N 0005218W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022E WYCOMBE AIR PARK/ BOOKER RWY 24G 513814N 0004433W - 513746N 0004408W - 513720N 0004527W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513642N 0004830W to 513749N 0004550W - 513814N 0004433W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U022G WYCOMBE AIR PARK/ BOOKER RWY 35 513351N 0004703W - 513344N 0004754W - 513443N 0004815W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513642N 0004830W to 513450N 0004724W - 513351N 0004703W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U023A FARNBOROUGH 511758N 0004954W - 511801N 0004919W - 511806N 0004829W - 511812N 0004723W - 511817N 0004705W - 511851N 0004551W - 511856N 0004537W thence clockwise by the arc of a circle radius 2.5 NM centred on 511631N 0004639W to 511758N 0004954W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2

Identification and Name Lateral Limits	Upper Limit Lower Limit	Remarks (time of activity, type of restriction, nature of hazard, risk of interception)
1	2	3
EGR1U023B FARNBOROUGH RWY 06 511452N 0005042W - 511521N 0005107W - 511536N 0005021W thence anti-clockwise by the arc of a circle radius 2.5 NM centred on 511631N 0004639W to 511507N 0004957W - 511452N 0005042W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U023C FARNBOROUGH RWY 24 511811N 0004233W - 511743N 0004209W - 511727N 0004257W thence anti-clockwise by the arc of a circle radius 2.5 NM centred on 511631N 0004639W to 511755N 0004322W - 511811N 0004233W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024A WHITE WALTHAM A circle, 2 NM radius, centred at 513002N 0004629W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024B WHITE WALTHAM RWY 03 512712N 0004802W - 512727N 0004848W - 512819N 0004807W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 512807N 0004719W - 512712N 0004802W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024C WHITE WALTHAM RWY 21 513247N 0004436W - 513233N 0004349W - 513137N 0004433W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 513154N 0004518W - 513247N 0004436W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024D WHITE WALTHAM RWY 07 512831N 0005037W - 512900N 0005059W - 512926N 0004932W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 512857N 0004910W - 512831N 0005037W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024E WHITE WALTHAM RWY 25 513134N 0004222W - 513104N 0004159W - 513039N 0004326W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 513108N 0004349W - 513134N 0004222W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024F WHITE WALTHAM RWY 11 513039N 0005100W - 513109N 0005042W - 513052N 0004925W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 513020N 0004939W - 513039N 0005100W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U024G WHITE WALTHAM RWY 29 512909N 0004152W - 512839N 0004210W - 512900N 0004345W thence anti-clockwise by the arc of a circle radius 2 NM centred on 513002N 0004629W to 512930N 0004324W - 512909N 0004152W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details see AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U025A HALTON A circle, 2 NM radius, centred at 514732N 0004411W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details, see UK MIL AIP, Part 3 - Aerodromes, Section AD 2.2
EGR1U025B HALTON RWY 02 514440N 0004521W - 514451N 0004610W - 514546N 0004539W thence anti-clockwise by the arc of a circle radius 2 NM centred on 514732N 0004411W to 514535N 0004450W - 514440N 0004521W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Unmanned aircraft flight not permitted unless permission has been granted by the relevant Air Traffic Service unit or aerodrome operator. For contact details, see UK MIL AIP, Part 3 - Aerodromes, Section AD 2.2

ENR 5.1 PROHIBITED, RESTRICTED AND DANGER AREAS (continued)

Identification and Name Lateral Limits	Upper Limit Lower Limit	Remarks (time of activity, type of restriction, nature of hazard, risk of interception)
1	2	3
EGR1U025C HALTON RWY 20 515024N 0004301W - 515013N 0004212W - 514919N 0004243W thence anti-clockwise by the arc of a circle radius 2 NM centred on 514732N 0004411W to 514930N 0004332W - 515024N 0004301W	Upper limit: 2000 FT AGL Lower limit: SFC	FRZ Active H24. Airspace Restrictions - Unmanned Aircraft Systems (UAS)

Unless otherwise stated either in the remarks section or associated SI the Navigational restrictions listed above with an identification which starts with "EGD", "EGP" or "EGR" are applicable to **both** manned **and** unmanned aircraft systems. Restrictions listed above with an identification which starts with "EGRnU" are applicable to **Unmanned Aircraft Systems only**, where 'n' denotes a number related to its location.

Unmanned Aircraft Systems (UAS) - Data File

To satisfy the requirement for the provision of a dataset of UAS Airspace Restrictions an electronic file is available by selecting the UAS Airspace Restrictions File (ENR 5.1) link from the list available on the current IAIP website (updated each AIRAC).

ENR 5.2 MILITARY EXERCISE AND TRAINING AREAS AND AIR DEFENCE IDENTIFICATION ZONE (ADIZ)

Name Lateral Limits	Upper - lower Limit System/means of activation announcement/information for Civil Flights	Remarks and time of activity
1	2	3
AIRBORNE SURVEILLANCE AND CONTROL (ASAC) TRAINING AREA 513400N 0043000W - 510200N 0043000W - 510119N 0042943W - southwest along the coast to 502358N 0050848W - 502400N 0050900W - 501300N 0044800W - 501305N 0044756W - then east along the coast to 503659N 0021309W - 503700N 0021300W - 512200N 0021300W - 512700N 0032700W - 513250N 0032500W - 514500N 0040000W - 513400N 0043000W	Upper limit: FL240 Lower limit: 2000 FT ALT	Activity: Air Intercepts, Air Combat Manoeuvring activity will take place in this designated area throughout the Bristol Channel, South West Approaches and the Southwest Peninsula of the UK. Service: The aircraft will, wherever possible, be in receipt of a radar service from the most suitable Air Traffic Control Radar Unit. However, when conducting tactical training in the Southwest Approaches, aircraft will normally be operating independently beyond and below land-based radar coverage. Advisory Measures: Details of aircraft operations may be obtained on request from Culdrose Approach on 282.575 MHz or 134.055. Sponsor: 824 Naval Air Squadron, RNAS Culdrose, Tel: 01326-552740. Remarks: Royal Navy ASaC Training Area in the Lundy, Bristol Channel and South West Approaches (SWAPPS) areas. The activity will remain clear of Controlled Airspace, active Danger Areas, Aerodrome Traffic Zones and Military Aerodrome Traffic Zones; unless cleared by, or under the control of, the appropriate authority. RN helicopters are permitted to operate below 3000 FT in IMC once clear of the coast and released by Air Traffic Control. Mode 3/A codes 3700-3707 will be utilised for RN ASaC Training. See Chart ENR 6-17 ROYAL NAVY AIRBORNE SURVEILLANCE and CONTROL (ASaC) TRAINING AREA. This coastline definition is a generalisation of the geographic feature; operators must not use this as a definitive boundary and are responsible for applying appropriate measures to ensure they operate within or outside of the airspace structure. Hours: Activated by NOTAM. Mon-Fri (excluding Bank Holidays). Times will be notified on a weekly basis by NOTAM.
MTA EAST ANGLIAN (EAMTA HIGH) 525836N 0003322W - 524349N 0014015E - 523621N 0014347E - 522528N 0011245E - 522624N 0000434W - 525836N 0003322W	Upper limit: FL660 Lower limit: FL285	AMC - Manageable. Because of the nature of the military activity within the East Anglian and North Wales MTAs, no Air Traffic Services can normally be provided within this airspace during their periods of activation. For exemptions, see ENR 1.1, paragraph 1.6.3.5. Remarks: Penetrating routes: P5, P144 and UM185. Adjacent routes: L603, L613, M16, N866, P155 and UP6. Hours: Activated by NOTAM.

AIAA OXFORD 515600N 0014900W - 520130N 0011745W - 515745N 0011126W - 514328N 0010000W - 513433N 0010000W - 513423N 0011138W - 513938N 0015510W - 515600N 0014900W	Upper limit: 5000 FT ALT Lower limit: SFC	Remarks: There is intense air activity associated with closely woven civil and military climb out and approach procedures for the many airfields in the vicinity. Pilots flying in this area are advised to keep a constant vigilance particularly during weekdays when military activity is at its peak, and especially in the area 8.5 NM/ 308(T) and 6 NM/145(T) from Oxford aerodrome where aircraft may be holding awaiting clearance to join airways. Advisory Measures: Radar services are available within this area from Brize Norton ATC on 124.280. The attention of pilots is also drawn to the Brize Norton Control Zone. (See ENR 2.1). Hours: Permanently active.
AIAA SHAWBURY 523130N 0030612W - 523702N 0031803W - 525515N 0031726W - 530239N 0030347W - 530445N 0021031W - 525314N 0020227W - 523710N 0021524W - 523212N 0022430W - 523209N 0023708W - 522828N 0024502W - 522828N 0025230W - 523130N 0030612W but excluding Controlled Airspace.	Upper limit: FL70 Lower limit: SFC	Remarks: Intense instrument flying and general handling training by large numbers of helicopters (including initial helicopter pilot training), together with IFR fixed wing airfield approaches and departures by student pilots. Night operations may be conducted using reduced navigation and/or anti-collision lights and Chetwynd is used extensively for military rotary wing operations by RAF Shawbury. Advisory Measures: Pilots are strongly recommended to avoid this area; if this is not possible a LARS is available from Shawbury ATC on 133.155. Hours: Peak activity Mon-Thu 0700-0130 (0600-0030) and Fri 0700-1700 (0600-1600).

Note 1: *(R) Receiver. (T) Tanker. Secondary A/A TACAN channels are the reverse of the primary channels.*

Note 2: *Swanwick (Mil); crews are strongly encouraged to file a Flight Plan; Swanwick (Mil) Flight Plan address EGZYOATT. Failure to file a Flight Plan may result in delays.*

ENR 5.2 MILITARY EXERCISE AND TRAINING AREAS AND AIR DEFENCE IDENTIFICATION ZONE (ADIZ) (continued)

Note 3: *Discrete Frequencies for AAR towline use are Primary 343.650, Secondary 264.925 and Tertiary 315.600.*

Note 4: *AARA 10 East and AARA 10 West. AARA 10 East is only available for Tanker-Trails routeing from UK to foreign destinations or vice versa. AARA 10 West is positioned clear of the main North/South Axis routes N862, (U)N864 and UN22 and is available for routine AAR sorties in UK. As AARA 10 and AARA 11 overlap, Tanker Plans will ensure that reservations are de-conflicted either by time or by use of different altitude reservations.*

Note 5: *AARA 13. Flight trial profiles may dictate that the RV takes place outside AARA 13. It remains the responsibility of the Tanker Controller to co-ordinate with other airspace users as necessary.*

Note 6: *In Areas designated as Permanently available for Air-to-Air Refuelling, the amount of warning concerning refuelling operations can be so minimal as to preclude notification by normal methods.*

Note 7: *Where Air-to-Air Refuelling Areas lie inside Free Route Airspace or are coincident with ATS Routes, civil / military co-ordination procedures are applied to minimise disruption to the planned flight profiles or the aircraft concerned.*

Note 8: *Where AARAs are required between FL 195 and FL 245 outside the normal hours of TRAs 001-008 (See ENR 5.2-2/3), the appropriate TRAs are booked via the MAMC - Managed Airspace before 1100 hours at D-1.*

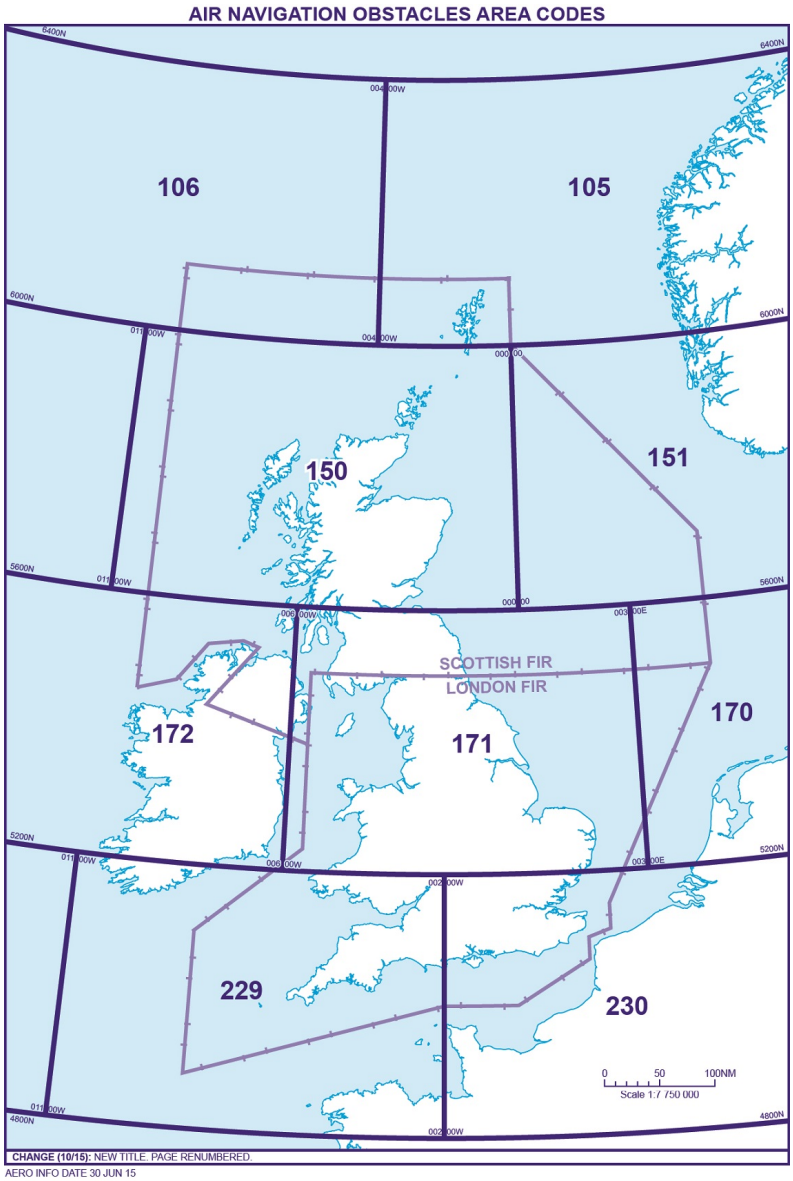
ENR 5.4 AIR NAVIGATION OBSTACLES

En-route Obstacles

To satisfy the requirement for the provision of Area 1 Obstacles (the height of which is 100 M or more AGL), an electronic file is available by selecting the Area 1 Obstacles File (ENR 5.4) link from the list available on the Current IAIP website (updated each AIRAC).



http://www.nats.aero/ais.

Mountains and Hills with Warning Lights

Designation/ Identification	Obstacle Type	Obstacle Position	Elevation/Height		Obstacle Lighting	Remarks
1	2	3	4		5	6
	Bohill Mt, Co Antrim	543600N 0060554W	871 FT	UNKNOWN	Yes Red	
	Church Hill, Co Fermanagh	542745N 0075403W	1126 FT	UNKNOWN	Yes Red	
	Bredon Hill, Worcestershire	520328N 0020304W	1046 FT	UNKNOWN	Yes Red	

Those conspicuous mountains and hills listed above are regarded as hazardous to aviation and are marked by red obstacle lights.

INTENTIONALLY BLANK

ENR 5.6 BIRD MIGRATION AND AREAS WITH SENSITIVE FAUNA

1 Bird Migration

1.1 There are no well defined heavily used bird migratory routes within United Kingdom airspace at any time of the year. Bird migration to and from the United Kingdom occurs largely in the autumn and winter on broad fronts in streams running E–W and N–S. The density of bird movements is greatest in SE England where these two fronts cross. Most migrating birds fly below 5000 FT.

2 Areas with Sensitive Fauna

2.1 As elsewhere in the world, offshore islands, headlands, cliffs, inland waters and shallow estuaries attract flocks of birds for breeding, roosting and feeding at various times of the year. Within 20 NM or so of such locations concentrations of birds flying mostly below 1500 FT may be encountered (see ENR 6.78 and ENR 6.79).

2.2 In order to lessen the risk of bird strikes, pilots of low flying aircraft should, whenever possible, avoid flying at less than 1500 FT above surface level over areas where birds are likely to concentrate. Where it is necessary to fly lower than this, pilots should bear in mind that the risk of a bird strike increases with speed (it is a fact that birds rarely hit an object moving slower than 80 knots). Apart from endangering aircraft by flying close to bird colonies, the breeding of the birds may be upset and the practice should be avoided on conservation grounds. It should also be appreciated that, especially in the case of sea bird colonies, concentrations of birds may be soaring on lee waves downwind of the areas where they breed.

3 Bird Sanctuaries

3.1 A Bird Sanctuary is airspace of defined dimensions within which large colonies of birds are known to breed.

3.2 Pilots are specifically requested to avoid the Bird Sanctuaries listed below, especially during any stated breeding season.

Identification and Name Lateral Limits	Upper Limit (FT) Lower Limit (FT)	Remarks
1	2	3
Isle of May A circle 1 NM radius centred on 561109N 0023327W.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year. Peak activity April to September.
Martin Mere A circle 1 NM radius centred on 533726N 0025242W.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year. Peak activity September to March.
Hilbre Islands A circle 1 NM radius centred on 532239N 0031255W.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Gibraltar Point A circle 1.5 NM radius centred on 530616N 0001949E.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Estuary area north-east of Brancaster A circle 1 NM radius centred on 525910N 0004041E.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Coast north of Holkham A circle 1 NM radius centred on 525832N 0004950E.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Coast north of Holme-next-the-Sea A circle 1 NM radius centred on 525832N 0003207E.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Blakeney Point A circle 1 NM radius centred on 525813N 0005851E.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Lakenheath Fen A circle 1.5 NM radius centred on 522657N 0003100E.	3000 FT ALT SFC	Pilots are requested to avoid the area from May to July and October to February.
Minsmere A circle 1 NM radius centred on 521445N 0013701E.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Havergate A circle 1 NM radius centred on 520423N 0013113E.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Otmoor A circle 1 NM radius centred on 514918N 0011038W.	2000 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Severn A circle 3 NM radius centred on 514429N 0022405W.	4000 FT ALT SFC	Pilots are requested to avoid the area throughout the year.

Cleethorpes, Humber Estuary Area bounded by straight lines joining successively the following points: 533346N 0000146W - 533432N 0000010W - 533106N 0000415E - 533015N 0000231E - 533346N 0000146W.	500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.
Bridgwater Bay, Stert Flats Area bounded by straight lines joining successively the following points: 511320N 0030608W - 511434N 0030205W - 511411N 0025953W - 511112N 0030108W - 511112N 0030523W - 511320N 0030608W.	1500 FT ALT SFC	Pilots are requested to avoid the area throughout the year.

4 Release of Racing Pigeons

4.1 In agreement with the Royal Pigeon Racing Association concerning the release of large numbers of racing pigeons:

a) There will be no release of racing pigeons within a radius of 7 NM from the following airports:

Aberdeen Dyce	Humberside	Manchester †
Belfast Aldergrove	Inverness	Newcastle
Birmingham	Kirkwall	Norwich
Bournemouth	Leeds Bradford	Prestwick
Bristol	Liverpool	Southampton
Cardiff	London Gatwick	Southend
East Midlands	London Heathrow	Sumburgh
Edinburgh	London Luton	Teesside International
Glasgow	London Stansted	

† See AD Section for further information

b) For other aerodromes in the United Kingdom all liberations shall be notified to the SATCO in writing fourteen days prior to the date of release and additionally by telephone 30 minutes before release time. On receipt of the 30 minute warning the SATCO or senior controller on duty may delay the liberation by up to 30 minutes for air traffic control purposes. Exceptionally, the liberation time may be delayed for a longer period.

VFR ATC CLEARANCE REQUIRED?		YES	YES	NO	NO

250 KIAS Not applicable to military aircraft

* Aircraft (including helicopters) may fly at or below 3000FT AMSL, or 1000FT above terrain, whichever is the higher, during day only, at 140KIAS or less, clear of cloud with the surface in sight and a flight visibility of at least 1500metres.
† Aircraft may fly at or below 3000FT AMSL, or 1000ft above terrain, whichever is the higher, during day only, at 140KIAS or less, clear of cloud with the surface in sight and: for aircraft other than helicopters, with a flight visibility of at least 5KM; for helicopters, with a flight visibility of at least 1500metres.
‡ SVFR in CTR only.

Note 1 PORTSMOUTH CTA-6:
During the notified hours of operation of SOLENT CTA the base changes to 5500ft ALT.

Note 2 PORTSMOUTH CTA-11, CTA-15, CTA-16:
Open daily 0830-0930 (0845-0830) and 1730-2130 (1630-2030).

Note 3 PORTSMOUTH CTA-17, CTA 18:
Open daily 0830-0930 (0845-0830) and 1730-2130 (1630-2030).
During the notified hours of operation of SOLENT CTA the base changes to 5500ft ALT.

Note 4 SOLENT CTA:
Mon-Sat 0930-2200 (0530-2100); Sun 0730-2230 (0630-2130).

Note 5 BERRY HEAD CTA-2, CTA-6:
Fri 1600 (1500) - Mon 0745 (0645).

Note 6 PEPZE CTA 2:
Daily between 2000-0700 (1900-0800).
Usage only as directed by ATC.

Note 7 HOLYHEAD CTA 7, HOLYHEAD CTA 16, STRANGFORD CTA 1, 5, & 6:
When the Isle of Man CTR/CTA is active, the upper limit of this CTA will be lower limit of the portions of these CTAs coincident with the ISLE OF MAN CTR/CTA will be FL105.

Note 8 BORDERS CTA 8, YORKSHIRE CTA 15, CTA 16:
Daily from 2000-0700 (1900-0800).

Note 9 BORDERS CTA 4:
Part or all of this airspace may not be available when activity associated with D510, Spadeadam requires access to the area. Non-availability of airspace will be notified to GAT by Scottish ACC.

Note 10 BORDERS CTA 5:
Part or all of this CTA may not be available when the Ministry of Defence (MoD) requires access to the area. Non availability of airspace will be notified to GAT by Scottish ACC.

Note 11 TAY CTA 3, CTA 4, CTA 5:
Sat 0901 - Sun 2359.
Use is by prior clearance of SERA.6001(a) Classification of Airspace in accordance with the conditions established in a Letter of Agreement (LOA) between the British Gliding Association (BGA) and Scottish Control (Prestwick).

Note 12 TAY CTA 19, CTA 11, CTA 12, CTA 13, BORDERS, CTA 12, CTA 13, CTA 14:
Conditional CTA - Its availability as specified by NOTAM when required for MOD access or by activation of EGD016Z.

Note 13 CHANNEL ISLANDS CTR, CTA-1 & TMA Outside hours of Jersey ATC:
Within London FIR - Receipt to Class G.
Within Brest FIR: - Airspace adopts the classification appropriate to Airway or uncontrolled airspace designation, as appropriate, as detailed in the France AIP.

Note 14 COTSWOLD CTA 15, CTA 16, CTA 17, CTA 18:
Flexible use of airspace.
Class G between hours 1700-0900 (1600-0800) Monday-Thursday
Class G 1700 (1600) Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G

COTSWOLD CTA 15, CTA 16, CTA 18:
Access restrictions may apply during NOTAM activation of EGD218.

Note 15 BIRMINGHAM CTA 10:
Flexible use of airspace.
Class G between hours 1700-0900 (1600-0800) Monday-Thursday
Class G 1700 (1600) Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G.

Note 16 EAST MIDLANDS CTA 14:
Only available between 0001-0600 (2301-0500).
Outside the published hours of service the airspace reverts to Class G.

Note 17 MORAY CTA 12, CTA 13:
Activation of the airspace will be during notified activation of EGD715/EGD717Z for Exercise Joint Warrior and other large military exercises as notified to facilitate access to the ATS Route N560

Note 18 MORAY CTA 16:
During notified hours of operation of the Dumbungh CTA/CTR the lower limit of MORAY CTA 16 changes to FL100.

Note 19 SCOTTISH TMA 1, 2, 3, 4, 5 TMZ:
Use of the airspace within Scottish TMA 1, 2, 3, 4, 5 between 6000 FT ALT and FL 100 is a TMZ (Transponder Mandatory Zone). Carriage and operation of a transponder with Mode A code and Mode C altitude (or equivalent Mode S) is mandatory.

CHANGE (12/26): ABERDEEN CTA 3 REVISED. ABERDEEN CTA 4 ADDED.

ENR 6-7

UNITED KINGDOM ALTIMETER SETTING AND FLIGHT INFORMATION REGIONS

The airspace below all airways and the Clacton, Cotswold, North Sea, Strangford and Worthing CTAs is part of the forecast QNH Altimeter Setting Region System (ASRs). Within all CTRs and within and below all TMAs and all other CTAs, during their notified hours of operation, the airspace does not form part of the forecast QNH ASRs.

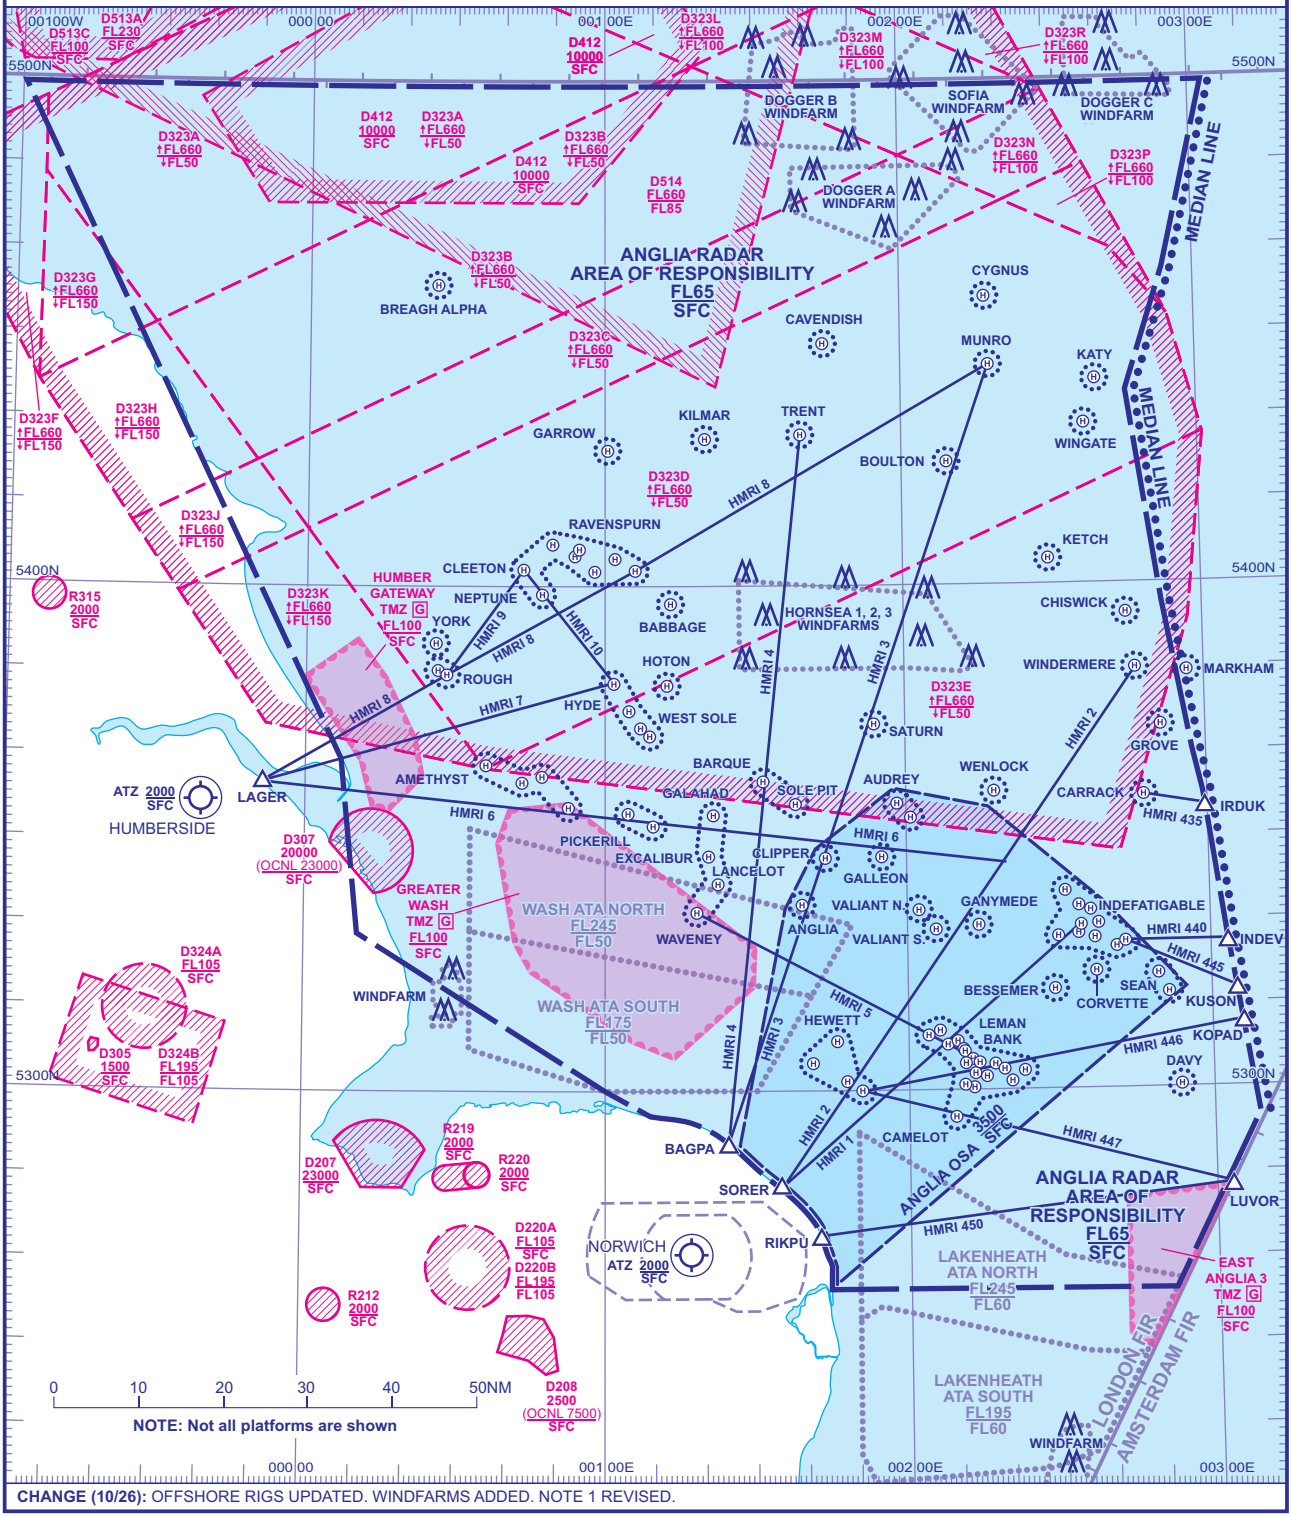
ENR 6-24

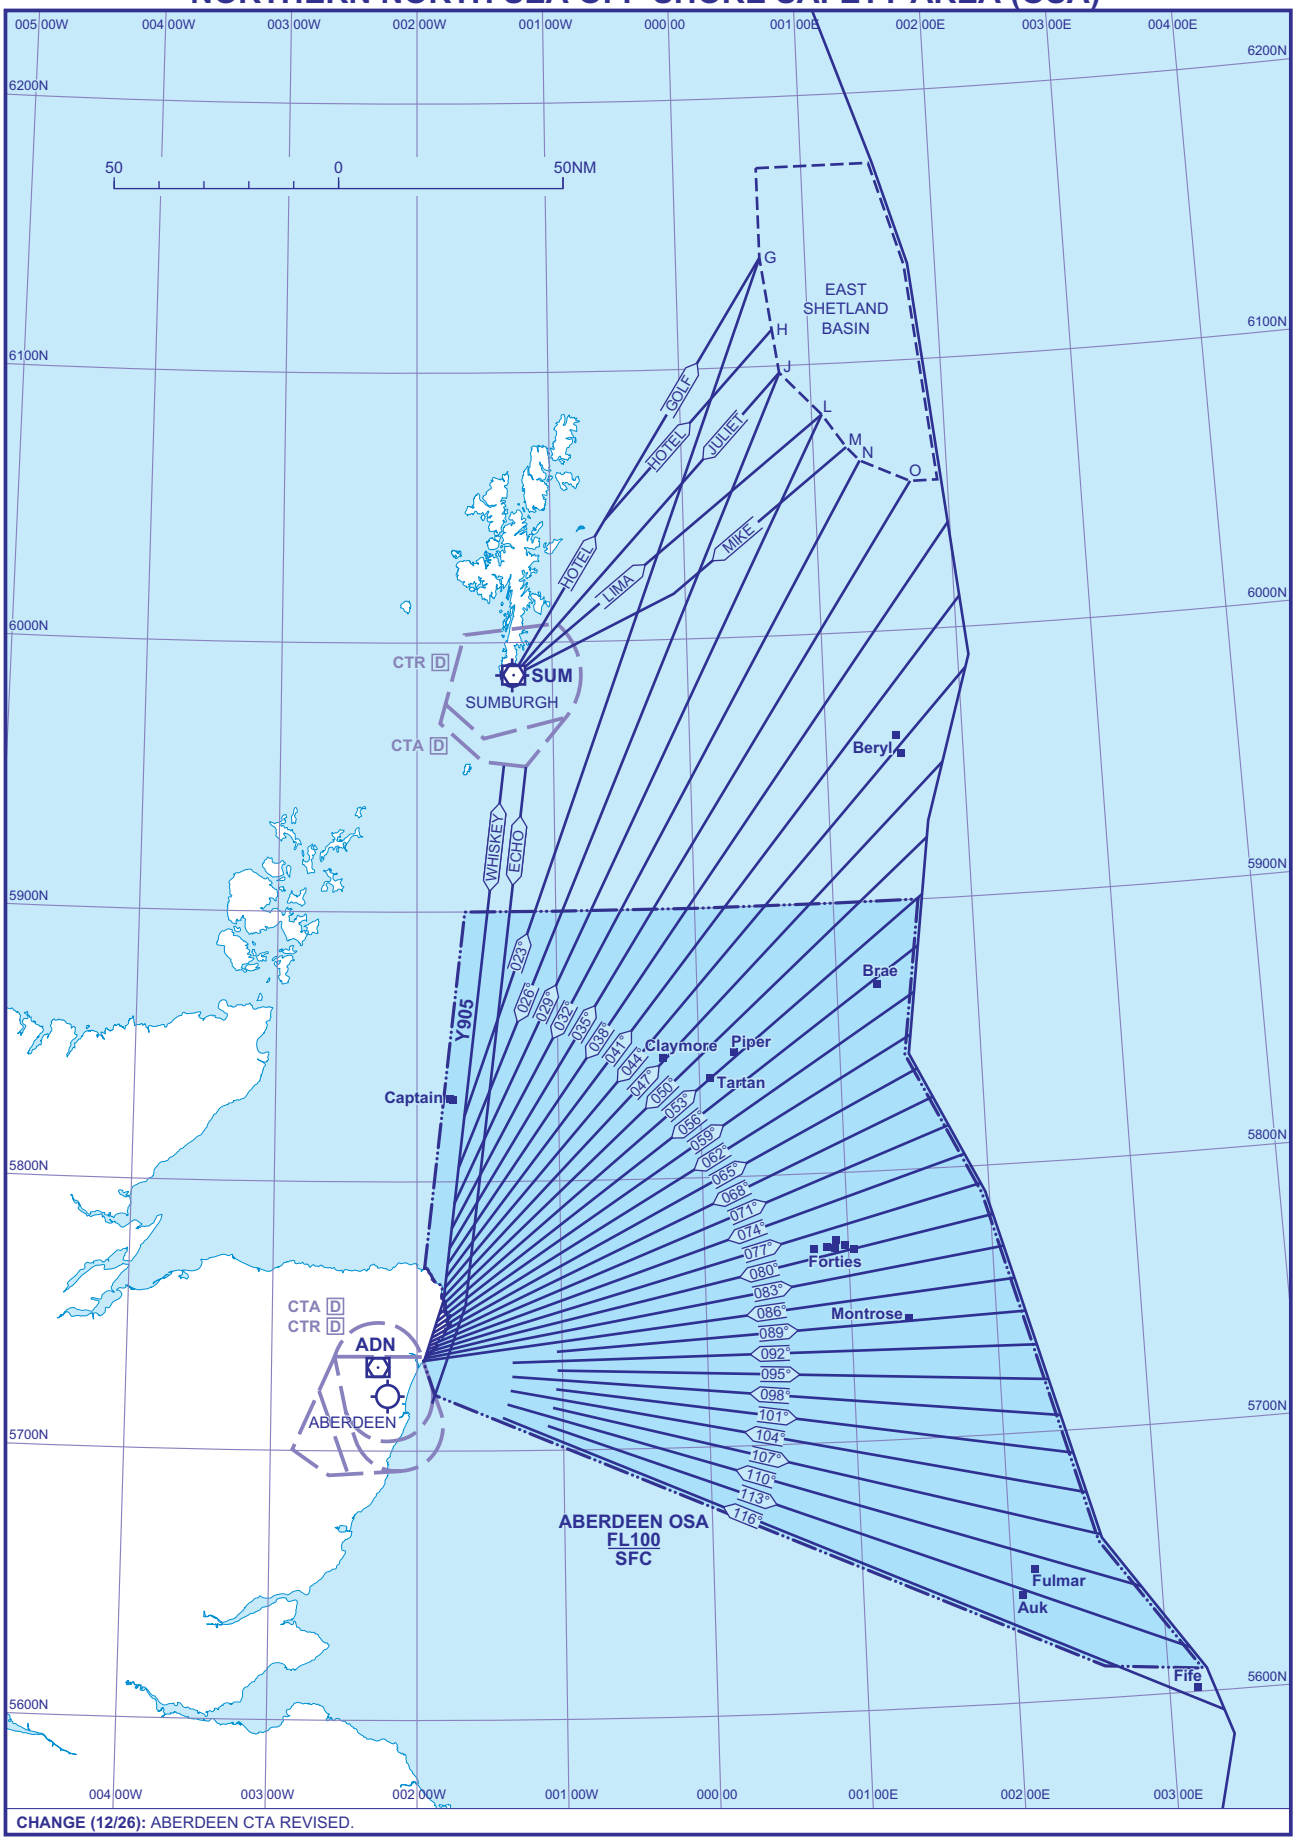


SOUTHERN NORTH SEA - ABERDEEN ATSU (ANGLIA RADAR) AREA OF RESPONSIBILITY AND ANGLIA OFFSHORE SAFETY AREA (OSA)

NOTES

1. Anglia Radar will not normally allocate cruising levels above FL040 in the Southern North Sea beneath EGD323D, EGD323E and EGD323K.
2. Helicopters will normally plan to fly at the following en-route altitudes:-

Outbound (land to sea)	Inbound (sea to land)
2000'ALT & 3000'ALT	1500'ALT & 2500'ALT



Above Transition Altitude (3000'ALT) aircraft should conform to Semi-circular Rule.

CHANGE (10/26): OFFSHORE RIGS UPDATED. WINDFARMS ADDED. NOTE 1 REVISED.

CHART OF UNITED KINGDOM AREAS OF INTENSE AIR ACTIVITY (AIAA) AND AERIAL TACTICS AREAS (ATA)

© Copyright NATS 2026 whose permission must be obtained before this chart is reproduced.
Only selected airspace up to FL245 is depicted on this chart.
Changes to this chart will be notified by amendments to the UK AIP.
Users are requested to refer any comments on the portrayal of information on this chart to :-
email:- aiasupervisor@nats.co.uk or vfrcharts@nats.co.uk
Published by NATS 2026
Chart compiled and drawn by NATS
AERO INFO DATE 15 JUN 26

Areas of Intense Air Activity

AIAAs are defined as: 'An airspace within which aircraft, singly or in combination with others, regularly participate in unusual manoeuvres'. Pilots of non-participating aircraft who are unable to avoid these areas are strongly advised to make use of a radar service.

a. SPADEADAM	× Mon-Thu 0900-1700 (0800-1600) and Fri 0900-1600 (0800-1500).	SUACS from Spadeadam on 128.725 MHz. SUAAIS from Newcastle on 124.380 MHz .
b. VALE OF YORK	× Mon-Thu 0900-1800 (0800-1700) and Fri 0900-1700 (0800-1600).	LARS from Leeming ATC on 133.380.
c. LINCOLNSHIRE	× Mon-Fri 0900-1700 (0800-1600).	LARS from Waddington ATC on 119.505 MHz and Coningsby ATC on 119.205 MHz.
d. THE WASH AREA	× Mon-Thu 0900-1700 (0800-1600) and Fri 0900-1500 (0800-1400).	LARS from Marham ATC on 124.155, Coningsby ATC on 119.205 MHz and Waddington ATC on 119.505 MHz.
e. SHAWBURY*	× Mon-Thu 0700-0130 (0600-0030) and Fri 0700-1700 (0600-1600).	LARS from Shawbury ATC on 133.155.
f. OXFORD	Permanently active.	Brize Norton ATC on 124.280.
g. YEOVILTON*	× Mon-Thu 0830-1700 (0730-1600) and Fri 0830-1600 (0730-1500).	LARS from Yeovilton ATC on 127.355. Note: For aircraft in transit south of a line east to west through Dorchester, a LARS is available from Plymouth Military Radar on 124.155 MHz but to avoid interference pilots should contact Plymouth Military south of 511000N.
h. CULDROSE*	× Mon-Thu 0830-1700 (0730-1600) and. Fri 0830-1630 (0730-1530).	LARS from Culdrose ATC on 134.055.
i. VALLEY	× Mon- Thu 0800-1800 (0700-1700) and Fri 0800-1700 (0700-1600).	Contact Valley ATC or London Radar.

× Peak activity takes place

See UK AIP ENR 5.2 for details of AIAAs.

***Within these areas, night operations may be conducted by aircraft using reduced navigation and/or anti-collision lights.**

Military Low Flying

Military low flying occurs in most parts of the UK at any height up to 2000 feet above the surface. However, the greatest concentration is between surface and 1000 feet and civil pilots should avoid flying in that height band whenever possible.

Military aircraft are considered low flying when:

a. Fixed wing aircraft except light propeller-driven aircraft, are flying below 2000 feet above the surface
b. Light propeller-driven aircraft and helicopters are flying below 500 feet above the surface. (UK AIP ENR 1.1)

Military Aerodrome Traffic Zones (MATZs)

Have the following vertical limits: SFC to 3000FT AAL within the circle and 1000FT AAL to 3000FT AAL within the stub. Zone configuration may vary, often two or more MATZs are amalgamated to produce a Combined Zone (CMATZ). Controlling aerodromes show the MATZ penetration frequency to be used. See UK AIP ENR 2-2.

Directional Flow Over An Area

These arrows do not indicate a particular route, and are meant to show the general direction of flight in an area.

Directional Flow Through Choke Point

These symbols are aligned to the direction of flight. Where there is bi-directional flow through a choke point, aircraft will route in accordance with the depicted symbols.

The Low Flying System of Directional Flow does not apply during weekends, UK Public Holidays and hours of darkness.

Warning
During military exercises, Directional Flow may be changed for operational reasons during the period of the exercise. Such changes will be notified in the Temporary Navigation Warning giving exercise details. Refer to the AIC for details of the UK Military Low Flying System.

Avoidance Areas

a. In the Avoidance Areas, military low flying does not normally take place unless the flights are in connection with an airfield located within such an area.

b. Military low flying does not normally take place within Class A and Class C airspace.

Where AIAAs and the Avoidance Areas overlap, military aircraft will not normally operate below 2000 feet except in connection with an airfield situated in the area.

Transit Areas

Military aircraft are not permitted to fly in Transit Areas below 1000 feet above the surface except helicopters and light propeller driven aircraft. These areas are designed to permit the easy transit of military aircraft between one low flying area and another.

Aerial Tactics Areas

ATAs are defined as: 'An airspace of defined dimensions designated for air combat training, within which high energy manoeuvres are regularly practised by aircraft formations'. Pilots of non-participating aircraft who are unable to avoid these areas are strongly advised to make use of a radar service.

Autonomous operations are only permitted within ATAs above FL195 when the overlying TRA is active.

1. WASH	× Mon-Thu 0700-2300 (0600-2200) and Fri 0700-1700 (0600-1600).	Swanwick Mil.
2. LAKENHEATH	× Mon-Thu 0700-2300 (0600-2200) and Fri 0700-1700 (0600-1600).	Swanwick Mil.
3. VALLEY	× Mon-Thu 0800-1800 (0700-1700); Fri 0800-1700 (0700-1600).	RAF Valley ATC or Swanwick Mil.

× Peak activity takes place

See UK AIP ENR 5.2 for details of ATAs.

The Salisbury Plain Area

The Salisbury Plain Area is an area of high activity used primarily by helicopters, although low flying civil and military fixed-wing aircraft operate from time to time in this airspace.

Advisory Radio Area

1. BOSCOMBE DOWN	Mon-Fri 0930-1730 (0830-1630).	Boscombe Down on 126.705

Test flight activity within this area often requires pilots to fly profiles which limit their ability to manoeuvre their aircraft in compliance with the Rules of The Air. Such flights will receive a radar service from Boscombe Down or the Swanwick Military Special Tasks Cell.

Pilots of other aircraft flying in the area are strongly advised to call Boscombe on 126.705 who provide pilots with information on any relevant test flight activity and, if requested, advice on arranging a detour area, or provision of an Air Traffic Service subject to controller workload.

2. WARTON	Mon-Thu 0730-1900 (0630-1800) and Fri 0730-1700 (0630-1600).	Warton on 129.530 MHz.

Test flight activity within this area often requires pilots to fly profiles which limit their ability to manoeuvre their aircraft in compliance with the Rules of The Air. Such flights will receive a radar service from Warton.

Pilots of other aircraft flying in the area are strongly advised to call Warton on 129.530 MHz who provide pilots with information on any relevant test flight activity and, if requested, advice on arranging a detour area, or provision of an Air Traffic Service subject to controller workload.

See UK AIP ENR 5.2 for details of ARA.

Low Level Civil Aircraft Notification Procedure (CANP)

Some civil aircraft operators have a requirement to fly at very low heights when carrying out authorised aerial work; the majority of these flights take place at or below 1000 feet above the surface. These operators are reminded that the CANP is designed to enhance flight safety in the lower airspace and they are strongly recommended to notify details of their operations in accordance with the UK AIP ENR 1.10. E-mail notification is preferred for CANP requests as this allows the LFC to E-mail or telephone confirmation of E-mail and issue a reference number to the aircraft operating authority. Contact details are as follows:

Low Flying Co-ord (LFC) at RAF (U) Swanwick.

Phone: 0800-515544 or 01489-443100.
Email: swk-lfofflfbc@mod.gov.uk

The types of air activity that should be notified include:

a. COMMERCIAL AIR ACTIVITIES
Aerial crop spraying (all agricultural work carried out by aircraft), underslung aerial load lifting, aerial photography/filming, aerial surveys/air surveillance.

b. RECREATIONAL AERIAL ACTIVITIES
Gliders, hang gliders, para gliders, free-flight balloons, microlight aircraft of model aircraft - where 5 or more are operating from a site not listed in the UK AIP for such activity, or are operating outside the hours published in the UK AIP.

c. OTHER AERIAL ACTIVITIES
Tethered/captive balloons to a height greater than 200 feet (60 metres) AGL, kite flying - 5 or more kites from a specified site to a height greater than 200 feet (60 metres) AGL, aircraft operations from water, any other aerial activity likely to create an exceptional concentration of aircraft at a site not listed in the UK AIP.

WARTON	WARTON RADAR **129.530**

1. Pilots operating in the vicinity of, but intending to remain outside controlled airspace within the areas defined above and maintaining a listening watch only on appropriate monitoring frequency are encouraged to select the appropriate SSR code.
2. Selection of SSR code does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances. Pilots remain responsible for their own navigation, separation and terrain clearance and are expected to remain clear of the controlled airspace at all times.
3. Whilst squawking the code pilots should be aware that ATC may make blind transmissions in order to ascertain a particular aircrafts intentions/route.
4. When a pilot ceases to maintain a listening watch, the code shall be deselected.

CHANGE (10/26): SOUTHAMPTON FMC AREA REVISED.

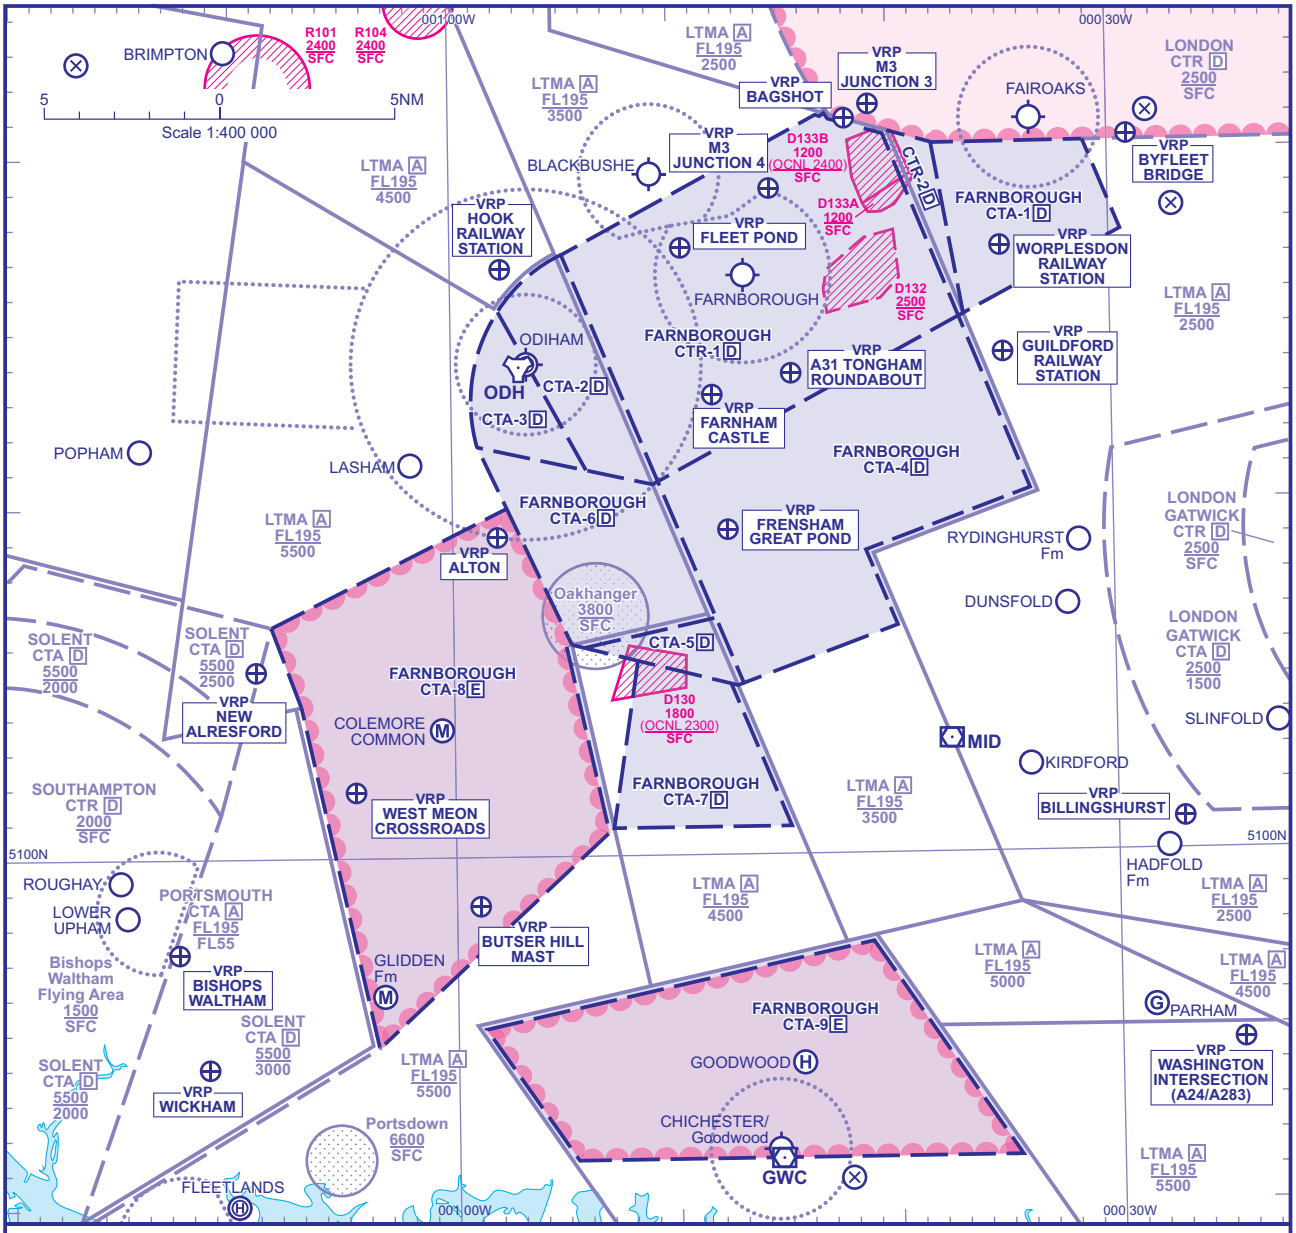
COTSWOLD (SHAWBURY TRIANGLE) FLEXIBLE USE AIRSPACE (FUA)

Note 1 COTSWOLD CTA 15, CTA 16, CTA 17 & CTA 18.
Flexible use of airspace.
Class C between hours 1700-0900 (1600-0800) Monday-Thursday and 1700 (1600) Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G.
COTSWOLD CTA 15, CTA 16, CTA 18
Access restrictions may apply during NOTAM activation of EGD218.

Note 2 BIRMINGHAM CTA 10.
Flexible use of airspace.
Class D between hours 1700-0900 (1600-0800) Monday-Thursday and 1700 (1600) Friday (or the day preceding a PH) to 0900 (0800) Monday (or the day following a PH).
Outside the published hours of service the airspace reverts to Class G.



Note 3 PEPZE CTA 13, CTA 14, COTSWOLD CTA 11, CTA 17
The following two areas, between the CTAs base level and FL 195, and referred to as the OSSEP Gliding Areas, are notified for the purposes of SERA.6001(a) Classification of Airspaces in accordance with conditions established in a Letter of Agreement (LOA) between the British Gliding Association (BGA) and London ACC, Swanwick Mil and Cardiff ATC:
MADLEY Box great circle lines joining: 520734N 0025744W - 520712N 0024624W - 515640N 0024718W - 515701N 0025836W - 520734N 0025744W.
RAGLAN Box great circle lines joining: 515701N 0025836W - 515640N 0024718W - 515040N 0024748W - 515153N 0025901W - 515701N 0025836W.
During periods of activation of these areas ATC will direct aircraft to remain clear of the active area.

CHANGE (5/24): NOTE 1 REVISED.

AD 0.1 TABLE OF CONTENTS TO PART 3 (continued)

The following information is listed for each individual aerodrome:

AD 2.1 Aerodrome location indicator and name
AD 2.2 Aerodrome geographical and administrative data
AD 2.3 Operational hours
AD 2.4 Handling services and facilities
AD 2.5 Passenger facilities
AD 2.6 Rescue and fire fighting services
AD 2.7 Seasonal availability - clearing
AD 2.8 Aprons, taxiways and check locations/positions data
AD 2.9 Surface movement guidance and control system and markings
AD 2.10 Aerodrome obstacles
AD 2.11 Meteorological information provided
AD 2.12 Runway physical characteristics
AD 2.13 Declared distances
AD 2.14 Approach and runway lighting
AD 2.15 Other lighting, secondary power supply
AD 2.16 Helicopter landing area
AD 2.17 Air traffic services airspace
AD 2.18 Air traffic services communication facilities
AD 2.19 Radio navigation and landing aids
AD 2.20 Local aerodrome regulations
AD 2.21 Noise abatement procedures
AD 2.22 Flight procedures
AD 2.23 Additional information
AD 2.24 Charts related to an aerodrome
AD 2.25 Visual segment surface (VSS) penetration

AD 3 Heliports

CHELTENHAM HELIPORT	EGBC	LONDON HELIPORT	EGLW	PENZANCE HELIPORT	EGHK

The following information is listed for each individual heliport:

AD 3.1 Heliport location indicator and name
AD 3.2 Heliport geographical and administrative data
AD 3.3 Operational hours
AD 3.4 Handling services and facilities
AD 3.5 Passenger facilities
AD 3.6 Rescue and fire fighting services
AD 3.7 Seasonal availability - clearing
AD 3.8 Aprons, taxiways and check locations/positions data
AD 3.9 Markings and markers
AD 3.10 Heliport obstacles
AD 3.11 Meteorological information provided
AD 3.12 Heliport data
AD 3.13 Declared distances
AD 3.14 Approach and FATO lighting
AD 3.15 Other lighting, secondary power supply
AD 3.16 Air traffic services airspace
AD 3.17 Air traffic services communication facilities
AD 3.18 Radio navigation and landing aids
AD 3.19 Local heliport regulations
AD 3.20 Noise abatement procedures
AD 3.21 Flight procedures
AD 3.22 Additional information
AD 3.23 Charts related to a heliport

AD 1 AERODROMES/HELIPORTS - INTRODUCTION

AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

1 GENERAL CONDITIONS

1.1 General Conditions under which Aerodromes/Heliports and Associated Facilities are Available for Use

1.1.1 Civil aircraft are not permitted to land at aerodromes in the United Kingdom other than those mentioned in this publication, except in cases of genuine emergency in flight or where special permission has been obtained from the aerodrome operator.

1.1.2 All values described in AD 2.2 section 5 (Magnetic Variation/Annual change) are decreasing.

1.2 Applicable ICAO Documents

1.2.1 The Standard Recommended Practices and Procedures contained in the following ICAO documents are applied with the Differences noted hereunder:

Annex 14 Volume 1	Aerodromes
Annex 14 Volume 2	Heliports
DOC 7030	Regional Supplementary Procedures
DOC 7754	ANP - EUMED Region

1.3 Prior Permission Requirements

1.3.1 There are two classes of civil aerodromes at which landings require the prior permission of the owner or the authority concerned. The persons in charge of most of these aerodromes require application for permission to land to be made by telephone prior to take-off; in cases where permission by RTF is acceptable or where application in writing is required this is indicated in AD 2 or AD 3 as appropriate.
The two classes of aerodrome are as follows:

a) Licensed Aerodrome (Ordinary Licence)

i. Prior arrangements with the person in charge are necessary as these aerodromes are licensed only for the use of the licensee or by persons specifically authorised by him.

b) Unlicensed Aerodromes

i. Prior arrangements with the owner or person in charge are necessary.
ii. Unlicensed aerodromes are not inspected by the Civil Aviation Authority.

1.3.2 Use of Government aerodromes is also subject to prior permission. (See section 2).

1.4 Availability of Ground Services

1.4.1 Details of the various ground services available at an aerodrome (ie fuel, hangarage, repair facilities, etc) may be found at AD 2 and AD 3.

1.4.2 It should be noted, however, that as some of the services are not the direct responsibility of the aerodrome management, the hours during which such services are available do not necessarily coincide with the hours during which the aerodrome is open to visiting aircraft.

1.4.3 It is the responsibility of the aircraft operator to ensure, before departure for an aerodrome, that such services are available.

1.5 Noise Abatement Requirements

1.5.1 Section 78(1) of the Civil Aviation Act 1982 enables the Secretary of State for Transport to publish a notice imposing a duty on operators of aircraft at designated aerodromes to comply, after take-off or before landing, with specified requirements for the purpose of limiting or mitigating the effect of noise and vibration connected with the taking-off or landing of aircraft. Notices under Section 78 are set out in AD 2.21 for London Gatwick, London Heathrow and London Stansted.

1.5.2 In order to ensure that NPRs continue to reflect the intended track over the ground, it is sometimes necessary to adjust the published bearings. This may be due to changes in magnetic variation or may be the result of a recalibration of a radio navigation aid.

1.6 Operational Hours

1.6.1 The hours indicated against AD 2.3/3.3 item 1 (AD/Heliport) are to be considered as the aerodrome/heliport operating hours or hours of availability unless otherwise stated. Note that revised operating hours may be notified by NOTAM.

1.6.2 All times are in UTC unless otherwise stated. Where 'SS' or 'SS+..' is shown as an alternative closing time, the aerodrome service

closes at whichever time is earlier, unless otherwise stated.

1.6.3 The commencement and cessation of the Summer Period (UTC + 1 hour) and the Winter Period (UTC) is shown at GEN 2.1.

1.7 Closure of Aerodromes

1.7.1 Pilots will not be refused permission to land or take-off at public-licensed aerodromes (AD 1.4 refers) solely because of bad weather conditions. Pilots of public and non-public transport aircraft should bear in mind, however, that the UK Air Navigation Order, requires that they do not infringe the applicable aerodrome operating minima.

1.7.2 The only circumstances in which a public-licensed aerodrome will be closed to normal air traffic during its published hours of availability are:

a) When the surface of the landing area is unfit;
b) at times and in conditions specified in NOTAM or AIP Supplements;
c) if essential aerodrome facilities are unserviceable.

1.7.3 In an emergency, pilots will be allowed to land regardless of the conditions of the aerodrome and aerodrome facilities.

1.8 Operations Outside Published Operating Hours

1.8.1 Aerodromes/Heliports may not be used outside the published hours of availability (see AD 2.3/3.3) without the prior permission of the appropriate authority. This applies not only to aerodromes of origin and destination but also to alternates.

1.8.2 Any application for operations outside published operating hours should be made to the authority controlling the aerodrome/ heliport.

1.9 Declared Distances

1.9.1 The distance shown for Take-off Run Available, Accelerate Stop Distance Available, Take-off Distance Available and Landing Distance Available in Items AD 2.13 and AD 3.13, are notified for the purposes of the Air Navigation (General) Regulations 2006 Part 3.

1.9.2 ‘Take-off Run Available' (TORA) is defined as the length of runway which is available and suitable for the ground run of an aeroplane taking-off.

1.9.3 'Accelerate-Stop Distance Available' (ASDA) is defined as the length of the declared take-off run plus the length of stopway available.

1.9.4 ‘Take-off Distance Available’ (TODA) is defined as the length of the declared take-off run plus the length of clearway available.

1.9.5 'Landing Distance Available' (LDA) is defined as the length of runway (or surface, when this is unpaved) which is available and suitable for the ground landing run of the aeroplane commencing at the landing threshold or displaced landing threshold.

1.10 Obstacles

1.10.1 For the purposes of ICAO Type C Charts, operators should assume that, in addition to the obstacles listed in the AD Section of the UK AIP and those which are shown on any ICAO Type A Charts, obstacles of up to 300 FT above ground level may exist:

a) outside the coverage of any ICAO Type A Chart; and
b) beyond 4 NM from the Aerodrome Reference Point.

1.10.2 Information for licensed aerodromes is limited to significant obstacles and the lists are not comprehensive, they do not necessarily include all shadowed obstacles.

1.10.3 To determine the existence of obstacles 400 FT or more above aerodrome level, operators should thus combine the above advice on the possible existence of obstacles with the detailed contour information which is given on the Ordnance Survey 1:50 000 Maps; relating the outcome to the published aerodrome elevation.

1.11 Visual Ground Aids

1.11.1 Details of visual ground aids, lighting, runway markings and self manoeuvring stand markings are given in Civil Aviation Publication CAP 637.

1.12 Runway Utilisation

1.12.1 Irrespective of the runway direction selected by ATC, or notified by FIS Operators, A/G communication service radio station operators or the Aerodrome Operator, it remains the pilot’s responsibility to obtain the latest weather and aerodrome information and to decide whether or not their skill, overall experience, and recent flying experience on the particular type of aircraft will enable

a safe take-off or landing to be accomplished in the prevailing wind and runway surface conditions.

1.12.2 Those responsible for selecting the runway in use normally chose a runway that is most closely aligned to the surface wind direction but this may vary because of local operational restrictions or procedures. A pilot who is unable to accept the runway in use should advise ATC, the FISO or A/G communication service radio station operator that the crosswind, or tailwind on that runway is outside of their limits and request the use of a more suitable runway. ATC staff at aerodromes can assist pilots of aircraft, particularly light aeroplanes and gliders, by offering, whenever possible, the runway most into wind for take-off and landing if this is not the runway in use.

1.12.3 Use of an alternative runway may entail some delay while aircraft movements for the runway in use are reorganised by the ATC unit, or a suitable break in other traffic occurs at aerodromes at which an AFIS (Callsign suffixed by 'Information') or A/G communication service (Callsign suffixed by 'Radio') is provided. Pilots should recognise that, in some circumstances, the only suitable alternative runway may be at another aerodrome.

1.12.4 ATC procedures are detailed in GEN 3.3.

1.13 Runway Surface Condition Reporting

1.13.1 Information relating to runways affected by water, frost, snow, slush and ice can be found at AD 1.2.2 SNOW PLAN; and guidance on the risks and factors associated with aircraft operations on runways contaminated with frost, snow, slush and water is published in an Aeronautical Information Circular.

1.13.2 The presence or otherwise of surface contaminants on a runway will be reported by the aerodrome operator using the Global Reporting Format (GRF). Further information relating to GRF is detailed in AD 1.2, paragraph 2.5, System and Means of Reporting.

1.13.3 At Government aerodromes, runway surface conditions will be reported using GRF. Further information relating to GRF is detailed in AD 1.2, paragraph 2.5, System and Means of Reporting.

1.14 Runway Friction Assessment

1.14.1 Full details of this procedure can be found in CAP 683, The Assessment of Runway Surface Friction Characteristics.

1.14.2 Aerodrome authorities are required to conduct periodic surveys of the friction characteristics of their runway surfaces. The purpose of these surveys is to predict the need for maintenance of the runway surface to prevent an unacceptable deterioration of grip as detailed in Table 1. The recognised Continuous Friction Measuring Equipment (CFME) devices in the UK are the Mu Meter, GripTester and ASFT.

Table 1: Mu-Meter and Grip Tester and ASFT Friction Levels

Continuous Friction Measuring Equipment (CFME)	Design Objective Level (DOL)	Maintenance Planning Level (MPL)	Minimum Friction Level (MFL)
Mu-Meter	0.72 or above	0.57	0.50
Grip Tester	0.80 or above	0.63	0.55
ASFT	0.82 or above	0.60	0.50
Note: *Friction Levels correspond to the CAP 683 procedure.*			

1.14.3 If a survey indicates that the runway surface friction characteristics have deteriorated below the specified Minimum Friction Level (MFL), then that runway will be notified by NOTAM as a runway that 'may be slippery when wet'.

1.14.4 When a runway is notified as 'may be slippery when wet', aircraft operators may request additional information relating to that notification from the aerodrome operator. However, any performance calculations or adjustment made as a result of this information is the responsibility of the aircraft operator.

2 USE OF MILITARY AIR BASES

2.1 The term Government Aerodrome is applied to those aerodromes in the United Kingdom which are in the occupation of any government department or visiting force. Therefore all UK military aerodromes are so designated.

2.2 It is the Ministry of Defence policy to encourage the use of active Government aerodromes by United Kingdom civil aircraft on inland flights, provided this is consistent with defence requirements and local interests. Those aerodromes notified as available to civil aircraft are listed in AD 1.1 Paragraph 2.12, but permission to use any government aerodrome must be obtained from the operating authority at the aerodrome concerned before landing (in this connection filing of a flight plan does not constitute prior permission). Unless there are special circumstances, permission will not normally be given for flights outside normal working hours of the aerodrome concerned.

2.3 Where permission is sought to use an inactive Government aerodrome, or for overseas flights, at least three weeks notice should

be given, except where the flight is of a humanitarian nature or is for agricultural aviation.

2.4 Foreign aircraft are not normally permitted to use UK Government aerodromes. However, those aerodromes identified as Military Emergency Diversion Aerodromes in GEN 3.6 may be used by foreign aircraft when the destination aerodrome, as indicated in the flight plan, is unusable because of adverse conditions.

2.5 The pilot of a civil aircraft wishing to use a military aerodrome will be required to comply with the following instructions:

a) Prior to flight departure, to obtain permission to land there from the authority at the aerodrome concerned; in this connection the filing of a flight plan does not constitute obtaining prior permission; also to provide details of the aircraft, crew and passengers. Permission to use an aerodrome may be withheld for operational or administrative reasons; rejection of a request for such reasons must be accepted as final;
b) all aircraft must comply with the ATC procedures in force at the aerodrome. Aeronautical information which is not published in the UK AIP may be obtained from the MIL AIP;
c) if making an instrument approach, pilots of civil aircraft should calculate their Aerodrome Operating Minima in accordance with AD 1.1 Paragraph 4;
d) after landing, to report personally to Air Traffic Control and give details of the aircraft, crew and passengers. Note that control of entry precautions normal to a particular military aerodrome will, in the interests of security, be applied to all persons arriving or departing by civil aircraft;
e) before taking-off, to report personally to Air Traffic Control and give particulars of flight crew and passengers, and obtain taxiing instructions. The pilot is responsible for deciding whether or not to proceed after receipt of clearance to taxi and take-off.

2.6 Hangarage for civil aircraft may be provided subject to agreement and, if provided, will be entirely at the owners risk.

2.7 Fuel, oil, or similar products, may be provided at the Commanding Officer's discretion but servicing or loading of civil aircraft cannot be undertaken except in cases of distress or exceptional circumstances. Pilots may make their own arrangements with civil petrol agents to refuel their civil aircraft on the aerodrome, provided that they furnish adequate cover against damage or loss arising from the presence of the agent's equipment and that prior permission for such arrangements is obtained from the Commanding Officer of the station. No permanent positioning of civil refuelling equipment or parties will be permitted, unless the approval of the Ministry of Defence has been obtained.

2.8 Liability will not be accepted by the controlling Department, its servants or agents, or by any servant or agent of the Crown for the loss or damage, by accident, fire, flood, tempest, explosion or any other cause to aircraft, or for loss or damage, from whatever cause, arising to goods, mail or other articles belonging to any person, even if such loss or damage is caused by or arises from negligence on the part of the Department's servants or agents or any servant or agent of the Crown. The use of military aerodromes will be permitted only upon the understanding that the controlling Department and the Crown will be held indemnified against all claims whatsoever made by third parties in respect of personal injuries (whether fatal or otherwise), damage to or loss of property howsoever caused, which may arise as a result of the facilities granted.

2.9 The use of any apparatus such as tractors, cranes, chocks, starter trolleys, etc, belonging to or under the charge of the controlling Department, by the personnel of aircraft or other persons making use of the aerodrome, will be entirely at the risk of the person using such apparatus, and no liability will be accepted for any loss, damage or injury caused by or arising from the use of any such apparatus (whether under the control or management of any servant or agent of the controlling Department or of the Crown or otherwise) other than liability for personal injuries or death caused by or arising from negligence on the part of any servant or agent of the controlling Department or the Crown. The use of such apparatus will be permitted only upon the understanding that the controlling Department and the Crown will be held indemnified against all claims whatsoever which may result from such use. It must, further, be clearly understood that the controlling Department does not in any way guarantee the safety or fitness of any such apparatus or of any equipment, petrol or oil, or similar products, supplied.

2.10 The civil use of Government aerodromes is, in addition to the limitations referred to above, subject to the appropriate charges being paid at the time. Use is also subject to the availability of appropriate Air Traffic Control and crash/rescue services as laid down by Ministry of Defence regulations.

2.11 The Government aerodromes listed in paragraph 2.12 are hereby notified for the purposes of the UK Air Navigation Order, subject to the conditions so specified as available for the take-off and landing of aircraft engaged on flights for the purpose of the public transport of passengers or for the purpose of instruction in flying.

2.12 These aerodromes do not necessarily comply with the specifications of ICAO Annex 14 because of their military use. However, the safety of civil registered aircraft operations is regulated by the UK CAA, while the UK Ministry of Defence (MoD) retains responsibility for all aspects of military registered aircraft operations and for the physical and military operational conditions at these aerodromes. The MoD is also responsible for publishing the necessary and appropriate flight and aerodrome safety information. Civil registered aircraft operators are reminded of their obligations under the UK Air Navigation Order.

Boscombe Down (MoD)	Mildenhall (RAF)
Brize Norton (RAF)	Northolt (RAF) - Refer to AD 1.3
Leuchars (RAF)	Waddington (RAF)
Yeovilton (RNAS)	

Aeronautical information in respect of these aerodromes may be obtained from the MIL AIP.

2.13 UK Military Aerodromes are not subject to the requirements in EU Regulation 216/2008 as amended by EU Regulation 1108/2009, EU Regulation 1035/2011 (relating to ANS) and EU Regulation 139/2014 (relating to aerodromes) and may not comply with the

AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

Annex 14 Volumes 1 and 2 of the ICAO Convention. Civil Operators requiring further information should contact the particular aerodrome in question; that unit will provide the requisite information and support.

3 LOW VISIBILITY PROCEDURES

3.1 CAT II/III Operations at Aerodromes

3.1.1 Promulgation of an aerodrome/runway as available for Category II or Category III operations means that it is suitably equipped and that procedures appropriate to such operations have been determined and are applied when relevant.

3.1.2 Promulgation implies that at least the following facilities are available:

- ILS - certificated to relevant performance category.
- Lighting - suitable for Category promulgated.
- RVR System - will be an automatic system for Category II and III.

3.1.3 Special procedures and safeguards will be applied during Category II and III operations. In general, these are intended to provide protection for aircraft operating in low visibilities and to avoid disturbance to the ILS signals. The details of any special taxi routes, runway turn-off points and runway holding points are shown in AD 2.

3.1.4 Protection of ILS signals during Category II or III operations may dictate that runway holding positions are more distant from the runway than the runway holding positions used in good weather. Taxiways lying within the ILS Sensitive Area are marked by colour coded taxiway centre-line (alternate yellow/green lights). Pilots should avoid stopping their aircraft within the ILS Sensitive Area and should make their 'Runway Vacated' call only after the aircraft is clear of the Sensitive Area.

3.1.5 In actual Category II or III weather conditions pilots will be informed by ATC of any unserviceabilities in the promulgated facilities so that they can amend their minima, if necessary, according to their operations manual. Pilots who wish to carry out a practice Category II or Category III approach are to request Practice Category II (or Category III) Approach on initial contact with Approach Control. For practice approaches there is no guarantee that the full safeguarding procedures will be applied and pilots should anticipate the possibility of resultant ILS signal disturbance.

3.1.6 Details of aircraft operator requirements for low minima operations, Category ll and lll, are contained within the Air Operations Regulation UK (EU) Regulation 965/2012 which can be obtained from the CAA website.

4 AERODROME OPERATING MINIMA

4.1 Introduction

4.1.1 This section of the AIP specifies the notified method of calculating Aerodrome Operating Minima (AOM).

4.2 General Requirements

4.2.1 Under the provisions of the UK Air Navigation Order, public transport aircraft shall observe AOM and aerial work and private aircraft shall observe AOM when conducting an approach to a runway with a notified Instrument Approach Procedure (IAP).

4.2.2 On 1 January 2021 UK AMC, GM and CS was adopted by CAA as Regulation (EU) No. 965/2012 as retained (and amended in UK domestic law) under the European Union (Withdrawal) Act 2018 replacing Commission Regulation No. 965/2012.

The UK Air Operations Regulation and Acceptable Means of Compliance and Guidance Material are available at:

Air Operations | Civil Aviation Authority (caa.co.uk).

4.2.3 All flight operations by aircraft within the UK Flight Information Region (FIR) are to operate with AOM no lower than calculated using the UK Air Operations Regulation. This is the same method as used to calculate minima published on commercially available flight guides.

4.2.4 For operations to AOM lower than Category 1 and the use of Enhanced Visual Systems to use reduced AOM values, advice should be obtained from Shared Services Centre, Civil Aviation Authority, Gatwick Airport South, West Sussex RH6 0YR.

4.2.5 It should be noted that the privileges of pilot licenses, Rules of the Air and limitations in the aircraft Flight Manual can be more restrictive than the AOM contained in this section. In establishing the AOM that will apply, full account must be taken of:

a) the type and handling characteristics of the aircraft;
b) the composition of the flight crew and their competence and experience;
c) the dimensions and characteristics of the runway which may be selected for use;
d) the adequacy and performance of the available visual and non-visual ground aids;
e) the equipment available on the aircraft for the purpose of navigation and/or control of the flight path, as appropriate, during the take-off, the approach, the flare, the landing, roll-out and missed approach;

f) the obstacles in the approach, and missed approach and climb-out areas required for the execution of contingency procedures and necessary clearance;
g) the obstacle clearance altitude/height for the instrument approach procedures; and
h) the means to determine and report meteorological conditions.

4.3 Commercial Air Transport (CAT) Operations

4.3.1 For CAT operators, the method of calculating AOM should be in accordance with the most restrictive of their company operations manual or the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

4.4 Public Transport Operations

4.4.1 For Public Transport aircraft registered in the UK the methods of calculating AOM in relation to 'specified' AOM in Article 107 shall be those in the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

4.4.2 For Public Transport aircraft not registered in the UK the AOM in relation to Article 108(3) shall be the most restrictive of their company operations manual or the UK Air Operations Regulation, unless more restrictive minima are notified in respect of a particular aerodrome.

4.5 Aerial Work and Private Aircraft

4.5.1 For Aerial Work and private aircraft operations the AOM in relation to Article 109 shall be no lower than published in the UK Air Operations Regulation unless more restrictive minima are notified in respect of a particular aerodrome.

4.5.2 The take-off minima selected for all flights by single-engine aeroplanes should be adequate to ensure a high probability of a successful forced landing being made should a failure of the engine occur after take-off.

4.6 Altimeter Error

4.6.1 When calculating Decision Height (DH), account must be taken of the errors of indicated height which occur when the aircraft is in the approach configuration. Details of the Pressure Error Correction (PEC) should be available from the aircraft Flight Manual or handbook. In the absence of this information a PEC of +50 FT has been found to be suitable for a wide range of light aircraft and should be used. This addition of 50 FT need only be applied to DH. The required RVR should be calculated prior to applying the PEC.

4.6.2 The use of a radio altimeter is only applicable to approved Category 2 and Category 3 operations. For an aircraft flying a Category 1 or non-precision IAP, DH/Minimum Descent Height (MDH) is indicated on the pressure altimeter. At DH/MDH any readings from a radio altimeter may be unreliable because of the large area of terrain providing return signals to the instrument.

4.6.3 Temperature Error. Pressure altimeters are calibrated to indicate true altitude under International Standard Atmosphere (ISA) conditions. Any deviation from ISA will therefore result in an erroneous reading on the altimeter. The altimeter will over-read for temperatures below ISA and the following table details the values to correct this error.

Aerodrome	Altitude Above Altimeter Source Elevation (FT) (normally destination elevation)													
Temp °C	200	300	400	500	600	700	800	900	1000	1500	2000	3000	4000	5000
0°	20	20	30	30	40	40	50	50	60	90	120	170	230	280
-10°	20	30	40	50	60	70	80	90	100	150	200	290	390	490
-20°	30	50	60	70	90	100	120	130	140	210	280	420	570	710
-30°	40	60	80	100	120	140	150	170	190	280	380	570	760	950
-40°	50	80	100	120	150	170	190	220	240	360	480	720	970	1210
-50°	60	90	120	150	180	210	240	270	300	450	590	890	1190	1500
Values to be added to published altitudes (FT)														

4.7 Obstacle Clearance Height (OCH)

4.7.1 The DH/MDH for an approach is determined in part by considering obstacles that could affect the approach of a particular aircraft. In broad terms, the more accurate the aid supporting the approach to be flown and the slower the approach speed of the aircraft, the smaller the area in which obstacles need to be considered. The height which is calculated to clear all obstacles by a defined margin within a particular area is called Obstacle Clearance Height and is the lowest height above the elevation of the relevant runway threshold or above the aerodrome elevation used in establishing compliance with the appropriate obstacle clearance criteria.

4.7.2 The OCH is listed for individual aerodrome approaches on the relevant Instrument Approach Chart in section AD 2. For the

purposes of calculating OCH helicopters are categorised as Aeroplane Category A.

4.8 Determination of DH/MDH

4.8.1 **Instrument Rating Holders in Current Practice**

4.8.1.1 A pilot with a valid instrument rating and who is in current practice may use the minima calculated in accordance with this section.

4.8.2 **IMC Rating / IR (Restricted) Holder in Current Practice**

4.8.2.1 Pilots with a valid Instrument Meteorological Conditions (IMC) Rating or Instrument Rating (Restricted) (IR(R)) are recommended to add 200 FT to the minimum applicable DH/MDH, but with absolute minima of 500 FT for a precision approach and 600 FT for a non-precision approach. The UK IMC Rating / IR(R) may not be valid outside UK territorial airspace, therefore such pilots should check the validity of their rating for the State in which they intend to fly. If the rating is not valid pilots must comply with the basic licence privileges, subject to the regulations of that State.

4.8.3 **Pilots not in Current Practice**

4.8.3.1 A pilot not in current practice should try to avoid having to make an instrument approach in poor weather conditions. If pilots have to make such an approach, even if they are fully confident of their abilities, they are advised to add 100 FT to their calculated DH/ MDH. Further increments should be added depending on when the pilot was last in full practice, and their familiarity with the aircraft, the procedure and the aerodrome environment.

4.9 Approach Ban - All Aircraft

4.9.1 The requirements for the commencement and continuation of an approach (approach ban) applicable to all CAT operations is given in CAT.OP.MPA.305.

4.9.2 The approach ban requirements for public transport operations, aerial work and private operations are defined in the UK Air Navigation Order. The ‘specified’ minima are detailed below and reflect the UK Air Operations Regulation.

4.9.3 An aircraft may commence an instrument approach regardless of the reported RVR/Visibility but the approach shall not be continued below 1,000 FT above the aerodrome if the relevant RVR/Visibility for that runway is at the time less than the specified minimum for landing.

4.9.4 If, after passing 1,000 FT in accordance with paragraph 4.9.3, the reported RVR/Visibility falls below the applicable minimum, the approach may be continued to DA/H or MDA/H.

4.9.5 The approach may be continued below DA/H or MDA/H and the landing may be completed provided that the required visual reference is established at the DA/H or MDA/H and is maintained.

4.9.6 The touchdown zone Runway Visual Range (RVR) shall always be controlling.

4.10 Military aerodromes in UK Territorial Airspace

4.10.1 The majority of military aerodromes in the UK use PANS-OPS design criteria for their approach procedures; the method of determining AOM is as outlined above. Where additional criteria are needed to meet unique military requirements, Military Instrument Procedures and Standards (MIPS) are used. The MIPS used are NATO AATCP-1 Approach criteria and all charts utilising MIPS are clearly labelled.

There are 3 exceptions where aerodromes operate in accordance with FAA requirements, utilising TERPS design criteria: RAF Fairford, RAF Lakenheath and RAF Mildenhall. All associated charts are clearly labelled as TERPS.

4.10.2 For non-precision approaches the Procedure Minimum may be taken to be the OCH.

4.10.3 DH/MDH should then be determined as previously described and the related RVR obtained from AATCP-1.

4.10.4 OCH information will not be used at British Military Aerodromes.

4.10.5 Instrument Approaches and landings at UK Military Aerodromes are usually flown on QFE, as is flying in the visual circuit. Aircraft that are unable to comply with the above procedure should inform ATC and will be accommodated wherever possible.

4.11 Overseas Aerodromes

4.11.1 AOM at overseas aerodromes should not be lower than those published as State minima or permitted by the privileges of the pilot's

AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

licence by the UK or overseas State.

4.12 Aerodromes Without Published Instrument Approach Procedures

4.12.1 For an aircraft landing at an aerodrome without an instrument approach procedure either:

a) a descent should be made in VMC until in visual contact with the ground, then fly to the destination; or
b) an IAP at a nearby aerodrome should be flown and proceed as in (a); or
c) if neither (a) nor (b) is possible, first obtain an accurate fix and then descend not lower than 1,000 FT above the highest obstacle within 5 NM (8 KM) of the aircraft. If visual contact (as at (a) above) has not been established at this height, the aircraft should divert to a suitable alternate with a published instrument approach procedure.

5 OTHER INFORMATION

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN

1 RESCUE AND FIRE FIGHTING SERVICES

1.1 The categories of fire and rescue equipment given at AD 2.6, their relevance to individual aircraft, and the minimum scales of equipment required to meet the respective categories are contained in Regulation (EU) No. 139/2014 as retained (and amended in the UK domestic law) under the European Union (Withdrawal) Act 2014, and associated rules and Civil Aviation Publication - CAP 168 - 'Licensing of Aerodromes'. They approximate closely to those contained in the relevant ICAO publications.

1.2 For the convenience of aircraft operators the relationship of the rescue and fire fighting categories to individual aircraft is summarised as follows: A = Aerodrome, H = Heliport

Aerodrome Fire and Rescue Category	Aircraft Overall Length (M)	Fuselage Width (M)
‡Special	0 up to but not including 9	2
A1	0 up to but not including 9	2
A2	9 up to but not including 12	2
A3	12 up to but not including 18	3
A4	18 up to but not including 24	4
A5	24 up to but not including 28	4
A6	28 up to but not including 39	5
A7	39 up to but not including 49	5
A8	49 up to but not including 61	7
A9	61 up to but not including 76	7
A10	76 up to but not including 90	8
‡ Aerodromes which are generally licensed solely in order that flying instruction may take place.		

1.3 For the convenience of helicopter operators the relationship of the Rescue and Fire Fighting categories to individual helicopters is summarised as follows:

Heliport Category	† Aircraft Overall Length (M)
‡Special	0 up to but not including 15
H1	0 up to but not including 15
H2	15 up to but not including 24
H3	24 up to but not including 35
† Helicopter length includes rotors and tail boom.	
‡ Aerodromes which are licensed solely in order that flying instruction may take place.	

2 RUNWAY SURFACE CONDITION ASSESSMENT AND REPORTING / SNOW PLAN

2.1 Organisation of the Runway Surface Condition Reporting and Winter Service

2.1.1 Agreement has been reached through the International Civil Aviation Organisation (ICAO) to apply standard procedures at international aerodromes within the European/Mediterranean Region, for the clearance of winter contaminants (frost, snow, ice, slush and associated water) from aerodrome surfaces and for the assessing and reporting of aerodrome surface conditions during adverse weather conditions. From 4 November 2021, UK aerodromes use the Global Reporting Format (GRF).

2.1.2 Prior to the onset of winter conditions, aerodrome operators prepare a plan to effect efficient clearance and measurement procedures intended to ensure maximum availability of the aerodrome. The plan is formulated in co-operation with Air Traffic Services and the aerodrome users. Arrangements are made to ensure that the plan can be implemented as soon as meteorological forecasts indicate the likelihood of surface contamination. The first priority is to clear operational runways and other essential parts of the movement area. Provision for assessment and reporting procedures are made. Subsequently, the surfaces cleared are maintained free of contaminant as far as is reasonably practicable.

2.2 Surveillance of Movement Areas

2.2.1 Surveillance of the movement area will be carried out typically from vehicles by trained aerodrome operator personnel. All reports will be based on human assessment of each runway third for % coverage, depth, and type of contaminant.

2.3 Measuring Methods and Measurements Taken

2.3.1 Continuous Friction Measuring Equipment (CFME) is not used for GRF purposes at UK aerodromes.

2.4 Actions Taken to Maintain the Usability of Movement Areas

2.4.1 Mechanical snow clearing equipment; blowers, sweepers, ploughs and rotary brushes form the main part of the contaminant clearance equipment used at most large aerodromes. Various methods are employed and brief details of those available at

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

individual aerodromes are given in the individual aerodrome entry of the AIP.

2.4.2 As far as practicable, clearance techniques employed prevent the build-up of snowbanks. Where this is unavoidable, every effort is made to restrict snowbanks to such a height and distance apart as to ensure safe manoeuvring of the most critical aircraft, in this context, normally using the aerodrome. Snowbanks are reported as soon as these are likely to affect safe manoeuvring by the most critical aircraft, in this context, normally using the aerodrome. Details of snowbanks will be notified in the situational awareness section of the SNOWTAM.

2.4.3 Slush and associated standing water are cleared whilst it is forming. Clearance may have to be repeated at intervals and some interruption of operations may be inevitable.

2.4.4 Salt is only used if it is found to be essential and is restricted to areas around edge drains to prevent slush build-up and to ensure continuous drainage. Liquid or other chemicals used for clearing ice on runways, taxiways and aprons are non-toxic and should have no detrimental effects on aircraft, aerodrome surfaces or the friction value of aerodrome pavements.

2.5 System and Means of Reporting

2.5.1 At UK aerodromes, ATS or the aerodrome operator according to local organisation, assess and report runway surface conditions.

2.5.2 UK aerodromes use the Global Reporting Format (GRF) which comprises an assessment by airport operations staff using a Runway Condition Assessment Matrix (RCAM) and the consequent assignment of a Runway Condition Code (RWYCC) ranging from 6 to 0. This code is complemented by a description of the surface contaminant based on type, depth and % coverage for each third of the runway. The code is based on the effect of the runway conditions on aircraft braking.

Note: *With the introduction of the GRF the requirement to include supplementary information regarding the state of the runway in METAR is removed.*

Runway Condition Assessment Matrix (RCAM)			
Assessment Criteria		Downgrade assessment criteria	
RWYCC	**Runway surface description**	**Aeroplane deceleration or directional control observation**	**Special air-report of runway braking action**
6	DRY	-	-
5	FROST WET (The runway surface is covered by any visible dampness or water up to and including 3 MM depth) **Up to and including 3 MM depth:** SLUSH DRY SNOW WET SNOW	Braking deceleration is normal for the wheel braking effort AND directional control is normal	GOOD
4	**-15 °C and lower outside temperature:** COMPACTED SNOW	Braking deceleration OR directional control is between good and medium	GOOD TO MEDIUM
3	WET (“slippery wet” runway) DRY SNOW or WET SNOW (any depth) ON TOP OF COMPACTED SNOW **More than 3 MM depth:** DRY SNOW WET SNOW **Higher than -15 °C outside air temperature:** COMPACTED SNOW	Braking deceleration is noticeably reduced for the wheel braking effort applied OR directional control is noticeably reduced	MEDIUM
2	**More than 3 MM:** STANDING WATER SLUSH	Braking deceleration OR directional control is between medium and poor	MEDIUM TO POOR

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

Runway Condition Assessment Matrix (RCAM)			
Assessment Criteria		Downgrade assessment criteria	
RWYCC	Runway surface description	Aeroplane deceleration or directional control observation	Special air-report of runway braking action
1	ICE	Braking deceleration is significantly reduced for the wheel braking effort applied OR directional control is significantly reduced	POOR
0	WET ICE WATER ON TOP OF COMPACTED SNOW DRY SNOW or WET SNOW ON TOP OF ICE	Braking deceleration is minimal to non-existent for the wheel braking effort applied OR directional control is uncertain	LESS THAN POOR

2.5.3 The outcome of the assessment and associated RWYCC are transmitted using a Runway Condition Report (RCR) forwarded to air traffic services and the aeronautical information services for dissemination to pilots. The pilots will use the RWYCC to determine their aircraft's performance by correlating the code with performance data provided by their aircraft's manufacturer. This will help pilots to correctly carry out their landing and take-off performance calculations for wet or contaminated runways.

Note: *Information provided via the Runway Condition Report is disseminated by SNOWTAM regardless of the nature of the contaminant. WET runway conditions are included in the runway condition report (RCR).*

2.5.4 The assessment process of assigning a RWYCC is a deterministic process, starting with the identification of the various contaminants, that determines what initial RWYCC must be reported. Based on all other information available, this initial RWYCC can be downgraded or upgraded using procedures detailed aerodrome specific procedures.

2.5.5 The revised scale GOOD, GOOD TO MEDIUM, MEDIUM, MEDIUM TO POOR, POOR and LESS THAN POOR is used by the flight crew to characterize perceived braking action and lateral control of the aeroplane during landing roll. When an aerodrome receives pilot reports indicating a braking action perceived as worse than that being reported the aerodrome operator should consider reassessing the runway surface conditions. RWYCCs 0 through 6 are mapped to this terminology in the runway condition assessment matrix (RCAM) and describe a consistent runway surface condition in relation to its effect on aircraft braking performance and lateral control. The RCAM correlates the RWYCC, the agreed set of criteria and the aircraft braking action which the flight crew should expect for each value of the RWYCC.

2.5.6 The aerodrome operator reports the runway surface condition over each third of the runway using a runway condition report (RCR). The report includes a runway condition code (RWYCC) using numbers 0 to 6, the contaminant coverage and depth, and a description reported in capital letters using the following terms:

a) COMPACTED SNOW; (snow that has been compacted into a solid mass such that aeroplane tyres, at operating pressures and loadings, will run on the surface without significant further compaction or rutting of the surface);
b) DRY;
c) DRY SNOW; (snow from which a snowball cannot readily be made);
d) DRY SNOW ON TOP OF COMPACTED SNOW;
e) DRY SNOW ON TOP OF ICE;
f) FROST; (ice crystals formed from airborne moisture on a surface whose temperature is at or below freezing; frost differs from ice in that frost crystals grow independently and therefore, have a more granular texture);
g) ICE; (water that has frozen or compacted snow that has transitioned into ice in cold and dry conditions);
h) SLUSH; (snow that is so water-saturated that water will drain from it when a handful is picked up or will splatter if stepped on forcefully);
i) STANDING WATER; (water of depth greater than 3 MM);
j) WATER ON TOP OF COMPACTED SNOW;
k) WET;
l) WET ICE; (ice with water on top of it or ice that is melting);
m) WET SNOW; (snow that contains enough water to be able to make a well-compacted, solid snowball, but water will not squeeze out);
n) WET SNOW ON TOP OF COMPACTED SNOW;
o) WET SNOW ON TOP OF ICE.

Note 1: *RCAM is used to allocate the appropriate Runway Condition Code to the runway surface description. The same contaminant may me associated with more than one RCC, depending mainly on depth (e.g. SLUSH, DRY SNOW, WET SNOW), temperature (COMPACTED SNOW) or additional conditions (WET).*

Note 2: *WET condition can be associated with two Runway Condition Codes: 5, if the runway surface is covered by any visible dampness or water up to and including 3 MM depth; or 3, if the runway is "slippery wet". States that follow EASA Regulations additionally use SPECIALLY PREPARED WINTER RUNWAY for runway condition code 4 and the descriptor WET for runway condition code 3 is replaced by SLIPPERY WET.*

2.5.7 A standard depth gauge may be used to measure the depth of snow, slush or water on runways as part of the overall assessment. Readings are taken at approximately 300 M intervals between 5 and 10 M on each side of the centre-line and clear of the effects of rutting. By international agreement depth information is given in millimetres representing the mean of readings obtained for each

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN (continued)

third of the total runway length.

2.6 The Cases of Runway Closure

2.6.1 Every attempt will be made to keep runways open and operational during adverse weather conditions. However as much advance notice of runway closure as possible will be provided to appropriate ATS Units and promulgated via NOTAM.

2.7 Distribution of Information about Runway Surface Conditions

2.7.1 Information on the current state of progress of snow clearance and on the conditions of the movement areas is available from a designated authority at the aerodrome concerned. Information on pavement conditions is also be available by RTF or ATIS from the aerodrome concerned.

2.7.2 Information on current surface conditions at UK and other European aerodromes generally is also available from the following sources:

a) SNOWTAM;
b) Automatic Terminal Information Service (ATIS);
c) RTF between ATS and aircraft operators.

2.7.3 The SNOWTAM provides a standard Runway Condition Report (RCR) which includes an assessment of each third of the runway including information on the runway designator, type, extent and depth of deposit.

2.7.4 The maximum validity of SNOWTAM is 8 hours. New SNOWTAM must be issued whenever a new RCR is prepared by the aerodrome. When no SNOWTAM is issued after 8 hours of a previous SNOWTAM for an aerodrome, the old SNOWTAM is expired and it should be assumed that there is no more significant runway surface condition to be reported.

2.7.5 ATIS message received by pilots includes operational runway direction, contaminant type, depth and percentage coverage.

2.7.6 RTF reports to pilots provide an assessment in plain language of the available runway length, including a description of the prevailing conditions i.e. ice, snow or slush, the Runway Condition Code, together with the time of the measurement.

AD 1.3 INDEX TO AERODROMES AND HELIPORTS (continued)

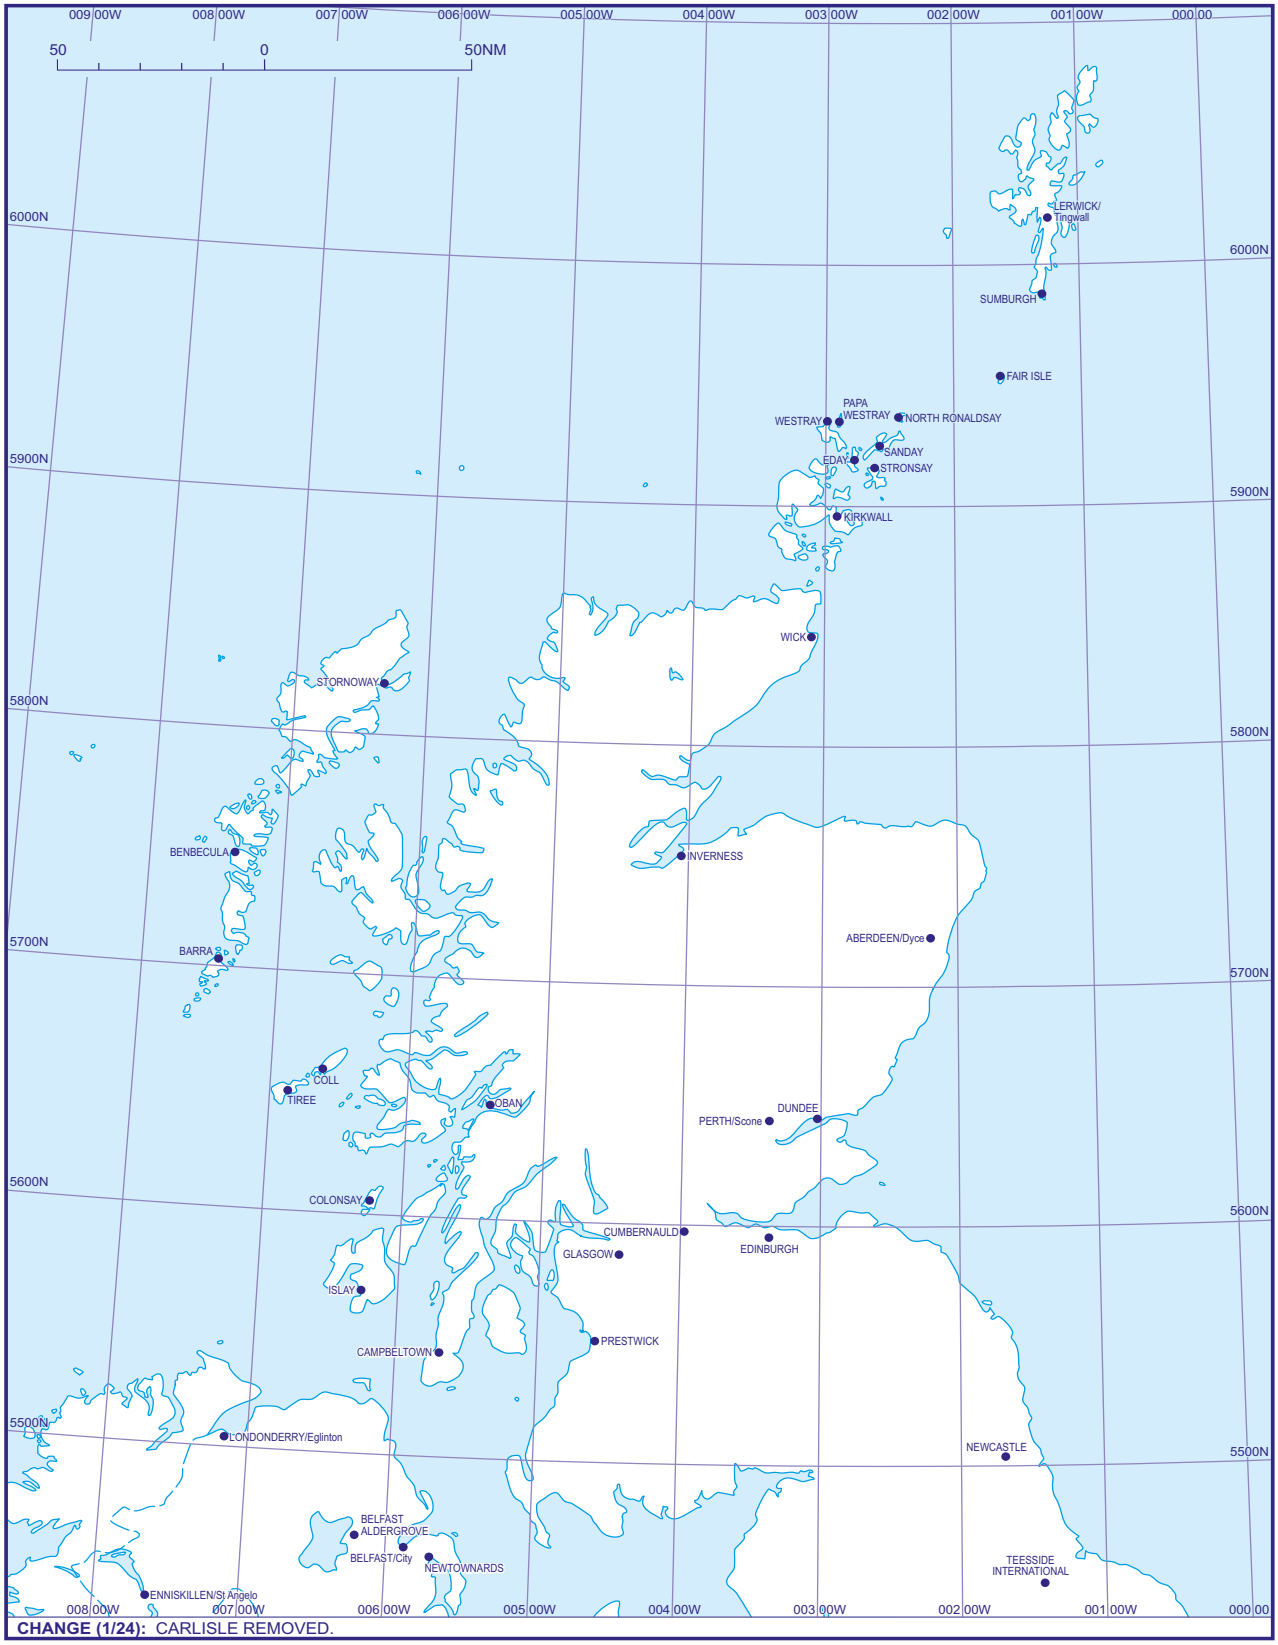
AERODROMES LISTED WITHIN THE AD SECTION OF THE UNITED KINGDOM AIP

CHANGE (9/26): SANDTOFT REMOVED.



AERO INFO DATE 17 JUN 26

AD 1.3-4

FOR THE LATEST CHANGES IN INFORMATION THIS CHART SHOULD BE CHECKED AGAINST THE AD 2 AND AD 3 SECTIONS OF THE UK AIP

AD 1.3 INDEX TO AERODROMES AND HELIPORTS (continued)

AERODROMES LISTED WITHIN THE AD SECTION OF THE UNITED KINGDOM AIP

CHANGE (1/24): CARLISLE REMOVED.

AERO INFO DATE 30 OCT 23

AD 1.3-5

FOR THE LATEST CHANGES IN INFORMATION THIS CHART SHOULD BE CHECKED AGAINST THE AD 2 AND AD 3 SECTIONS OF THE UK AIP

INTENTIONALLY BLANK

AD 1.4 GROUPING OF AERODROMES/HELIPORTS

1 Aerodrome Categorisation

1.1 Responsible Authority

1.1.1 The Civil Aviation Authority, through its Safety and Airspace Regulation Group (SARG), Manager Aerodromes and ATM, is responsible for the general surveillance of all licensed and certificated civil aerodromes in the United Kingdom. Enquiries relating to aerodromes and licensing/certification should be made to Aerodromes Sub-Department Tel: 01293-573419. See GEN 1.1 for address.

1.2 Licence Types

1.2.1 In the United Kingdom there are two types of civil aerodrome licence, namely Public Use Licence and Ordinary Licence.

1.2.2 Aerodromes or Heliports operated in accordance with a Public Use Licence must have their hours of availability notified in the UK AIP and the aerodrome/heliport must be available to all operators on certain equal terms and conditions. However, this does not necessarily mean that the aerodrome is available to all flights without limitation. Aircraft operators must check and comply with the requirements and conditions of use indicated at AD 2 or AD 3.

1.2.3 Aerodromes or Heliports operated in accordance with an Ordinary Licence may accept flights operated by the holder of the licence or by those specifically authorised by that licence holder. This normally means that prior permission is required for most flights but it does not exclude the possibility of scheduled or non-scheduled public transport flights being arranged after the formal agreement of the licence holder.

1.2.4 The annotations within column 4 of the table at AD 1.3 reflect the aerodrome/heliport licence type and must be interpreted in conjunction with the above descriptions and with the conditions of use indicated at AD 2 and AD 3.

1.3 Government Aerodromes

1.3.1 Detailed descriptions of Government aerodromes are not listed in the UK AIP.

1.3.2 Several Government aerodromes accept civil traffic subject to prior approval. These aerodromes are listed at AD 1.3 and detailed information about them is published in the UK Military documentation which is available to civil pilots on application to the RAF AIDU at Northolt (see GEN 3.2.3 for address and contact details).

1.3.3 Refer to AD 1.1 subsection 2 for general conditions of use.

1.4 Unlicensed Aerodromes/Heliports

1.4.1 Unlicensed Aerodromes/Heliports are not published in the UK AIP, except as detailed in Paragraph 1.4.2 below, however NOTAM may be issued notifying safety related changes affecting the operating conditions at any unlicensed Aerodrome/Heliport.

1.4.2 Where the CAA has approved a helicopter Point-in Space procedure (PinS) to an unlicensed Aerodrome or Heliport the unlicensed Aerodrome/Heliport will be published in the UK AIP AD 2 or AD 3. All PinS procedures are for use by CAA approved operators only, but details are published in the AIP to make airspace users aware of the presence of a PinS procedure and to assist users in taking appropriate mitigating actions in the vicinity of a PinS.

1.4.3 For further details regarding PinS refer to CAA Publication CAP2520 - Policy and Guidance for the implementation of Point-in-Space Helicopter Operations in the UK.

1.5 Aerodromes/Heliports published in the UK AIP that DO NOT operate under the conditions of IFR or SVFR are considered outside of the scope of aeronautical data quality requirements (ADQ) and are listed here:

EGPD — ABERDEEN/DYCE

EGPD AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGPD — ABERDEEN/DYCE

EGPD AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 571209N Long: 0021153W
2	Direction and distance from city	5 NM NW of Aberdeen.
3	Elevation / Reference temperature / Mean Low Temperature	215 FT / 16 °C / -
4	Geoid undulation at AD ELEV PSN	164 FT
5	Magnetic Variation / Annual Change	0.08°E (2027) / 0.21°E
6	AD Administration Address Telephone Telefax	ABERDEEN INTERNATIONAL AIRPORT LTD. Aberdeen International Airport, Dyce, Grampian, AB21 7DU. 01224-725060 (Aberdeen International Airport Ltd) 01224-723714 (NATS Ltd) 01224-727176 (ATC)
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	Telephone calls to ATC may be recorded.

EGPD AD 2.3 OPERATIONAL HOURS

1	AD Administration	0600-2230 (0500-2130). PPR outside of these hours.
2	Customs and immigration	Immigration: 0700-2300 (0600-2200). Customs: 0700-2300 (0600-2200). Outside of these hours see remarks.
3	Health and sanitation	-
4	AIS Briefing Office	-
5	ATS Reporting Office (ARO)	-
6	MET Briefing Office	-
7	ATS	See AD 2.18.
8	Fuelling	Menzies: 0530-2300 (0430-2200) (AVTUR JET A-1). Signature: 0630-2130 (0530-2030) (AVGAS 100LL and AVTUR JET A-1). See Remarks.
9	Handling	See AD 2.4.
10	Security	-
11	De-icing	See AD 2.4.
12	Remarks	Aerodrome Operator: Delayed fixed-wing aircraft scheduled to operate 0600-2230 (0500-2130) must request extended opening by 2100 (2000). All other fixed-wing traffic must request extended opening with at least 24 hours notice. Fixed-wing aircraft operating between 2300-0600 (2200-0500) must be Quota Category 4 or below as defined in the Department for Transport, Noise Restrictions Notice for London Airports published bi-annually as a Supplement. Customs/Immigration: Prior arrangement required before 2100 (2000) for scheduled delayed flights (international flights and domestic flights carrying interlined international passengers and their effects). Nonscheduled flights require prior arrangement with a minimum of 24 hours notice. Fuelling: Menzies: Tel: 01224-394220; Tel: 01224-394221; Email: abz.ops@menziesaviation.com. Signature: Tel: 01224-723636; Email: abz@signatureaviation.com.

EGPD AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	By arrangement with Swissport on 01224-770518.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL
3	Fuelling facilities/capacity	-
4	De-icing facilities	By arrangement with nominated handling agent.
5	Hangar space for visiting aircraft	-
6	Repair facilities for visiting aircraft	-
7	Remarks	All aircraft must have a handling agent appointed prior to arrival/departure. Handling agencies are: Primeflight: Tel: 01224-348517 or 07791-973108; E-mail: abzops@primeflight.com; SITA: ABZDHXH; Channel: 131.415 Signature: Tel: 01224-723636; Fax: 01224-725458; E-mail: abz@signatureaviation.com SITA: ABZECXH; Channel: 131.615 Operators must include Aberdeen Airport SITA address of ABZPA7X for all flights inbound to Aberdeen.

EGPD AD 2.5 PASSENGER FACILITIES

1	Hotels	Eight Hotels, 500 metres.
2	Restaurants	Restaurant and bar.
3	Transportation	Buses, taxis and car hire. Nearest railway station Dyce 2 NM.
4	Medical facilities	First aid treatment.
5	Bank and Post Office	Bureau de Change
6	Tourist Office	-
7	Remarks	-

EGPD AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 RFF Category 8 available by arrangement.
2	Rescue equipment	-
3	Capability for removal of disabled aircraft	Yes. Contact: 01224-725793 or 01224-725055.
4	Remarks	-

EGPD AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Manoeuvring Area: Mechanical, Chemical de-icing. Apron Walkways: Chemical/granule de-icing.
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Latest information from: Airside Operations; Tel: 01224-725055; ATC Tel: 01224-727160.

EGPD AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	APRON Surface: Concrete and asphalt Stands 1-9 PCR: 470/R/B/W/U Stands 10-14 PCR: 485/R/C/W/U Stands 15-16 PCR: 165/R/C/W/U Stands 30-31 PCR: 170/F/C/W/U CHARLIE APRON Surface: Concrete and asphalt PCR 130/R/C/X/U ECHO APRON Surface: Concrete and asphalt PCR 165/R/C/W/U
2	Taxiway width, surface and strength	Taxiway ALPHA: 15 M Surface: Asphalt PCR 50/R/C/X/U Taxiway CHARLIE: 15 M Surface: Asphalt PCR 170/F/C/X/U Taxiway DELTA: 22.5 M Surface: Concrete and asphalt PCR 485/R/C/W/U Taxiway ECHO: 15 M Surface: Asphalt PCR 140/F/C/X/U Taxiway MIKE: 23 M Surface: Concrete and asphalt PCR 470/R/B/W/U
3	Altimeter checkpoint location and elevation	Main Apron 204 FT Echo Apron 188 FT
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Parking/Docking Chart.
6	Remarks	Taxiway PCR values may be higher at some sections due to construction type. Any PCR queries should be directed to the Airside Operations Manager.

EGPD AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1A, 7A, 10A, 10L, 10R, 30 and 31 available under marshaller guidance only. Stand Guidance System on all other stands as stated below. Parking guidance facilities to be used by the Commander: Stands 1-5 and 15-16: Safedock. Stands 6-9 and 10-14: AGNIS with stop arrow paint marking on ground. In some strong light conditions, pilots may experience glare on Safedock system (Stands 1-5, 15 and 16). If unable to correctly interpret stand guidance system, pilots must request marshalling assistance.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 16/34: Runway designation, runway threshold, runway edge lines and lights, runway/taxiway centreline, fixed distance, touchdown. Taxiway marking aid(s): Yellow centre-line paint marking. Taxiway light(s): Green centre-line on Taxiways Alpha, Charlie, Delta and Mike, blue edge lights and/or reflective markers on other taxiways.

3	Stop bars and runway guard lights (if any)	Red stop bars are located at holding points A4, C3, D2, E1, E2, E3, E4, E5, E6, E7, E8, E9, M1, M5, M7 and M9 and are in use at all times during the hours of ATC operation. No aircraft is to cross a red stop bar unless given a specific instruction to do so under escort from an Airside Operations vehicle.
4	Other runway protection measures	-
5	Remarks	Aircrews are to note that the Stand Entry Guidance is activated by Airline and Handling Agent staff as prescribed in CAP 642. Aircrew should not enter the stand unless the stand guidance is illuminated or if advised that it is unserviceable, under marshaller guidance only. An emergency stop sign has also been installed on all SEG equipped stands. When activated, an electronic red flashing 'STOP' warning sign is illuminated. Aircraft must not enter the stand under any circumstances until the sign has been switched off. Runway 05/23, Runway 14/32 and Runway 36 Helistrip designators and aiming point marked (Runway 23 only). Runway 36 paint markings extend beyond the North end of this runway. Three WDI: 571143.71N 0021124.09W (LGTD) - 571228.15N 0021222.45W (LGTD) - 571209.15N 0021211.76W (LGTD).

EGPD AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) All flights are subject to the prior approval of the Managing Director, Aberdeen International Airport Ltd and prior notification to Airport Coordination Ltd, who act as an agent for the airport. With the exception of General Aviation and Military flights, requests for ad-hoc slot allocations should be made to ACL during working hours, Mon-Fri 0830-1700 (0730-1600), by e-mail: lonacxh@acl-uk.org; or Tel: 0161-493 1850, or at all other times to Airside Operations 01224-725055.
b) Use of the aerodrome for training purposes is subject to the prior permission of the Operations Director, Aberdeen International Airport Ltd.
c) Ground running of aircraft engines for test or maintenance is subject to the approval of the Operations Director, Aberdeen International Airport Ltd and shall be kept to the minimum consistent with operational needs. Ground runs are not permitted on Sun 1100-1300 (1000-1200).
d) Ambulance, Offshore Emergency and Medivac flights (including helicopters) are not subject to the restrictions as detailed in AD 2.3 Item 1 and Item 12 (paragraph 1).
e) Non-radio aircraft subject to PPR from ATC.
f) Use of APUs on Echo Apron is restricted to +/- 45 minutes from arrival or departure. Beyond this time, aircraft requiring power must use Ground Power Units arranged through the ground handling company.
g) Flight Planning: Any Flight Plan requiring submission must be faxed to ATC: 01224-727170. The Flight Plan Form (CA48/RAF F2919) must also contain a contact telephone number.

Note: *Any Flight Plans sent to EGPDZPZX for onward transmission will not be actioned.*

2 GROUND MOVEMENT

a) Subject to apron capacity, aircraft not departing within 2 hours may be relocated to a remote parking area.
b) Only aircraft with a wingspan of 19 M or less are permitted to self manoeuvre on Stands 1 to 16, under marshaller guidance. Ground crews must be in attendance at such aircraft that intend to undertake this manoeuvre.
c) Pilots should always use the minimum power necessary when self-manoeuvring their aircraft on all areas of the aerodrome.
d) Standard pushback procedures for Stands 1-17 are:

i. All aircraft must conduct curved pushbacks from Stands 1, 1A, 9, 12, 13 and 14. Curved pushbacks from all other stands available on request with ATC. Aircraft on Stand 16 that require a curved pushback will be instructed to conduct a curved pushback behind Stand 17 to face east, followed by a pull forward manoeuvre behind Stand 15.
ii. Embraer E195-E2 on Stands 2, 3 and 4 and Airbus A321 on Stand 3 to conduct curved pushbacks.
iii. Aircraft of length 44 M or more (Airbus A321 or longer) to conduct a curved pushback from Stand 7 and 7A.
iv. Except as noted in (ii) and (iii), all aircraft from Stands 2, 3, 4, 5, 6, 7, 8, 10, 10L, 10R, 11, 15, 16 and 17 are to conduct straight pushbacks.

Powerback manoeuvres may be conducted from Stands 2-8 and 15-17 by aircraft of Jetstream 41 size or smaller. Powerbacks are not permitted from Stands 1 and 9-14.

ATC approval for all pushback manoeuvres must be obtained prior to pushback commencing. Pilots must inform ATC if the pushback manoeuvre issued cannot be conducted.

e) Pilots must exercise caution to ensure no part of the airframe crosses over the apron boundary markings (delineated by double white lines) when commencing taxi following pushback.
f) Remote hold available at Holding Point D1A (facing west) with the following restrictions:

i. Maximum wingspan size of 36 M. When the remote hold is in use, aircraft with a wingspan greater than 36 M must be escorted past the holding aircraft;
ii. Only one aircraft may use the remote hold at any one time;
iii. Use is granted on a strict order of request basis (to request the facility contact GMC or TWR);
iv. The remote hold is available 0600-0900 (0500-0800) and 2000-2230 (1900-2130) each day and by arrangement with Airside Ops and ATC;
v. ATC may remove the remote hold from use at any time;
vi. When the remote hold is in use, holding points D2 and A4 will not be available for aircraft movement;
vii. Remote hold is not available for use when Low Visibility Procedures are in force.

g) At all times, aircrew are responsible for their wingtip/rotortip separation and, if in any doubt, should stop, hold position and request marshaller assistance.
h) Taxiway Echo movement restrictions:

i. The section of Taxiway Echo between Holding Point E8 and the Compass Base is available to vehicles for non-towing movements only.
ii. Due to a 4% longitudinal slope along the section of Echo Taxiway between the NHV Apron and the Compass Base, all aircraft may taxi to/from the Compass Base from E9 under their own power with caution. During winter operations and periods of adverse weather, Airside Operations may temporarily close this section of taxiway or restrict the use of it to permit only aircraft under tow to access the Compass Base.

i) Holding Point T1 may only be used by aircraft with a wingspan up to 24.8 M.
j) Pilots will be issued with ‘Runway in Use’ and ‘Pressure Setting’ information prior to start-up clearance being given. There after, taxi instructions will contain only holding point designators.
k) Full ATC clearance is available from EOBT -15 minutes.
l) Aircraft vacating Runway 16 at Holding point M1 must not taxi beyond Holding point M2 without onward ATC taxi clearance.
m) Simultaneous aircraft movements through Holding points C3 and D2 are not permitted.
n) Pilots taxiing from Stands 30/31 should expect to turn left after leaving the stand onto Taxiway Charlie or Delta (depending on parking direction).
o) Pilots instructed to park on Echo Apron must park under marshaller guidance unless otherwise authorised by Airside Ops.
p) Width of Taxiway Echo is variable. Information on maximum aircraft size permitted on this taxiway available from Airside Operations or ATC.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Except for light signals, ground signals are not displayed.
b) Intensive large helicopter activity.

Light aircraft should be aware of the possible effect of rotor downwash and wake vortices generated by large helicopters operating to/ from the aerodrome.

c) Use of Taxiway Alpha between A1 and A2 is restricted to aircraft not exceeding 19.7 M wingspan. The width of Taxiway Charlie between Taxiway Mike and Taxiway Bravo is 7.5 M and suitable for use by helicopters only.
d) PAPI approach slope guidance for Runway 16 should not be used until the aircraft is established on the extended centre-line of the runway.
e) Moderate/severe turbulence and windshear may be experienced on approaches to all runways when the 1000 FT wind exceeds 15 KT from the sector 200° through west to 320°.
f) Owing to the terrain around Bennachie (11 NM NW of Aberdeen Airport), GPWS warnings are possible on intermediate approach to Runway 16 from the south and west.
g) Occasional crane activity at the following positions (all relative to the ARP):

i. 255-280°/1000-1600 M up to 140 FT AGL;
ii. 355°/800-1400 M up to 115 FT AGL.

h) Pilots of aircraft departing from aerodromes located within the Aberdeen CTR must ensure they are in receipt of an explicit controlled airspace entry clearance prior to departure. It should be noted that the passing of flight plan details to ATC does not constitute a request for, or the issue of, a controlled airspace entry clearance.
i) Adverse weather conditions: Increased spacing on final approach may be in operation during periods of adverse weather conditions (cloud ceiling of 300 FT or less and/or IRVR 1000 M or less). Increased periods of holding may be required and operators should fuel plan accordingly.
j) Model aircraft flying at:

i. Haremoss' position 570515N 0020912W, approximately 1.5 NM northwest of Portlethen. Model aircraft not exceeding 13 KG in weight may be operated up to 400 FT AGL, daily, during daylight hours;
ii. Meikle Wartle position 572146N 0022656W and site elevation 420 FT AMSL, approximately 5 NM north-northwest of Inverurie. Model flying may take place above 400 FT AGL.

5 HELICOPTER OPERATIONS

a) Locally based operators may be authorised to carry out landings on Runway 23H independently of operations on Runway 16/34 in accordance with procedures approved by the CAA. The landing distance available for these operations is reduced to 220 M, the end of which is indicated by yellow runway guard lights and the E6 stop bar.
b) Night approaches and landings on Runway 23H are not permitted if the HAPI (Helicopter Approach Path Indicator) is unserviceable. Helicopters approaching Runway 23H must not descend below the HAPI glidepath before crossing the railway.
c) ICAO helicopter rotor clearances require minimum separation distances between the blade tips of two moving helicopters. Adequate separation exists between:

i. A helicopter holding at C3 and a helicopter turning from A4 onto Taxiway Delta;
ii. A helicopter holding at M5 and a helicopter using disused Runway 18;
iii. A helicopter holding at B1 and a helicopter on Taxiway Charlie between C1 and C2.

6 USE OF RUNWAYS

a) Runways 05H/23H, 14H/32H and 36H are only available for helicopter movements.
b) Runway 14/32 is not available for take-off and landing at night. However, ground and hover taxi movements on Runway 14/32 in order to access Runway 16/34 are permitted at night.
c) Runway 36

i. With the exception of paragraph 6c ii, Runway 36 is not available for any aircraft movements at night. Additionally, no aircraft movements on this section of manoeuvring area in the reciprocal direction to Runway 36 are permitted at night.
ii. Movements between Runway 16/34 and Holding Point M5 traverse part of Runway 36. Such movements are permitted at all times.

d) Pilots of departing aircraft must inform ATC if a backtrack is required from their runway holding point. This information should be passed to ATC prior to line up clearance being issued.

7 TRAINING

a) All training flights are subject to approval by ATC. General training flight acceptance policy:

i. Mon-Fri: Instrument training flights by civil aircraft other than those based at Aberdeen Airport will not be accepted. Circuit training by military aircraft will not be accepted and military practice diversion instrument approaches limited to 0800-2000 (0700-1900) where approved by ATC;
ii. Sat-Sun: Instrument training flights by civil aircraft are permitted subject to ATC approval. Military practice diversion instrument approaches limited to 0800-2000 (0700-1900) where approved by ATC;
iii. Daily: Aircraft on EXAM callsigns will be accepted where approved by ATC.

b) Pilots of training aircraft carrying out go-arounds are advised that for the purposes of terrain clearance, that portion of the flight will be treated as a departure.
c) Training may be curtailed if significant noise complaints are received.

EGPD AD 2.21 NOISE ABATEMENT PROCEDURES

All aircraft inbound to or outbound from this aerodrome are required to conform to the following procedures, notwithstanding that these may at any time be departed from to the extent necessary for avoiding immediate danger.

a) Every operator of aircraft using the aerodrome shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.
b) Inbound IFR aircraft greater than 5700 KG may conduct Continuous Descent Approaches (CDA) from first contact with Aberdeen ATSU to an altitude of 4000 FT. In order to facilitate CDAs, when in receipt of an Approach Radar service and when ATC workload permits, controllers will attempt to provide appropriate descent instructions and distance from touchdown information on at least two occasions prior to reaching 4000 FT. Additional range checks may be requested by aircrew.

Actual speed control will be issued by ATC as required for separation and sequencing purposes, however pilots conducting a CDA should expect speed restrictions of 250 KT or less below FL 100, 210 KT or less when 20 NM from touchdown and 160 KT or less when 10 NM from touchdown.

c) IFR aircraft shall not join final approach to either runway at a height of less than 1500 FT Aberdeen QFE unless they are propeller driven aircraft whose MTWA does not exceed 5700 KG when the minimum height shall be 1000 FT Aberdeen QFE.
d) In addition to paragraph 2.21(c), aircraft conducting an instrument approach shall not descend below 1800 FT Aberdeen QFE before intercepting the ILS or norminal glidepath nor thereafter fly below it. Aircraft landing without ILS assistance shall follow a descent path consistant with a 3° glidepath (or the approach procedure recommended profile if different).
e) Approach to Helistrip 23 aiming point should be on a heading of 218° (MAG).
f) Subject to Air Traffic Control requirements and weather conditions

i. Training circuits should be undertaken to the west of the aerodrome;
ii. Fixed-wing departures should be on Runway 34. Arrivals should be on Runway 16;

g) Aircraft operating between 2330-0600 (2230-0530) are requested to use minimal reverse thrust for noise abatement where this will not compromise the safe conduct of flight.

EGPD AD 2.22 FLIGHT PROCEDURES

1 HOLDING

a) The main holding pattern will be based on the VOR ADN but ATC may request aircraft to hold at DOWNI, L ATF. Details of all these patterns are as follows.

Holding Point	Details
VOR ADN	Holding axis 158° MAG, turning left at the facility. Lowest holding altitude 2500 FT.
DOWNI (570439N 0020621W)	Holding axis aligned on ADN VOR RDL 158° (Inbound track 338° MAG) between 15 DME ADN (DOWNI) and 20 DME ADN, turning right at the fix. Lowest holding altitude 2500 FT.
L ATF	Holding axis 338° MAG, turning right at the facility. Lowest holding altitude 2500 FT.

2 ENTRY/EXIT LANES

a) To facilitate the operation of aircraft to and from Aberdeen/ Dyce Airport, the following entry/exit lanes have been established for use under the stated conditions and subject to the provisions of the Air Traffic Control rules as stated at ENR 1.4.

i. A lane, 3 NM wide, known as the Peterhead Lane with centre-line from Hackley Head 571949N 0015717W (a point on the Aberdeen CTR boundary) thence southwest along the coast to Bridge of Don, then along the River Don to the point at which it crosses the Aberdeen Aerodrome Traffic Zone;
ii. a lane, 3 NM wide, known as the Stonehaven Lane with centre-line from 565522N 0021200W (a point on the Aberdeen CTA boundary) thence northeast along the coast to Bridge of Don, then along the River Don to the point at which it crosses the Aberdeen Aerodrome Traffic Zone;
iii. a lane, 3 NM wide, known as the Inverurie Lane with centre-line the Aberdeen/Inverness railway line extending from 571931N 0023510W (a point on the western boundary of the Aberdeen CTR) through Inverurie and Kintore to the point at which it crosses the Aberdeen Aerodrome Traffic Zone. Additionally, for aircraft taking-off from Runway 16 or proceeding for a landing on Runway 34, a branch lane of similar width is established with centre-line the A96 road extending from Kintore to the point at which it crosses the Aberdeen Aerodrome Traffic Zone.

b) These lanes are shown at AD 2-EGPD-4-1.

i. Use of the lanes is subject to clearance being obtained from ATC Aberdeen, irrespective of prevailing weather conditions. This clearance is to be obtained by non-radio equipped aircraft before take-off and by radio equipped aircraft before entering the lane.
ii. Aircraft using the lanes must remain clear of cloud and in sight of the ground or water, not above 2000 FT Aberdeen QNH (unless authorised by Aberdeen ATC).
iii. An aircraft using a lane shall keep the centre-line on its left, unless otherwise instructed by ATC.
iv. Pilots of aircraft are responsible for maintaining adequate clearance from the ground or other obstructions.
v. When Runway 34 is in use, pilots operating on the Stonehaven Lane, should expect an ATC clearance to route offshore not above 1000 FT (Aberdeen QNH) when south of Girdleness.

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) Initial Departure Routings:

i. Pilots can expect that the initial 'after departure' instruction will usually contain a waypoint or heading that is not the first waypoint contained in the flight plan.

b) Pilots of aircraft at intermediate runway holding points that require a runway backtrack for departure should inform ATC prior to lining up on the runway.

c) On first contact with Aberdeen Radar, pilots of departing aircraft are required to report their passing altitude (based on Aberdeen QNH) and cleared altitude or Flight Level.
d) The width of Runway 16/34 is twice that promulgated in two locations due to additional pavement on the east side of the runway. Pilots lining up on Runway 16/34 abeam Holding Points M7 or E9, or at the Runway 34 threshold must ensure they are correctly lined up on the runway centre-line prior to departure.
e) The Preferred Departure Routes specified in the following table are compatible with ATC requirements and the tracks are to be flown by all departing jet aircraft and by all other departing aircraft of more than 5700 KG MTWA unless otherwise instructed by ATC or unless deviations are required in the interests of safety.

Runway	ATC Clearance	Procedures
16	Via P600 GLESK	Climb straight ahead. At ADN DME 8.5 NM or 800 FT AAL whichever is the later, turn right to LAVTI (570818N 0022417W). At LAVTI turn left to GLESK.
16	Via ADN VOR Y904/Y905/P600 LESNI	Climb straight ahead. At ADN DME 8 NM or 600 FT AAL, whichever is the later, turn left to ADN VOR. At ADN VOR turn on course.
34	Via P600 GLESK	Climb straight ahead to 1000 FT AAL. After reaching 1000 FT AAL turn left to GLESK.
34	Via ADN VOR Y904/Y905/P600 LESNI	Climb straight ahead to ADN VOR. At ADN VOR turn on course.

Note: *See AD 2.22 3(a)(i) for additional after departure warning.*

4 ABERDEEN ROYAL INFIRMARY (ARI) OPERATIONS

a) Pilots of aircraft operating to/from ARI should be aware of the potential for conflictions and/or TCAS events to occur with aircraft operating to/from Aberdeen Airport. To reduce conflictions, the following procedures apply:

i. When inbound to ARI, pilots will be issued with departure instructions as follows:

1. For VFR departures: Hold overhead ARI not above 500 FT on Aberdeen QNH until in two way communication with ATC;
2. For Special VFR departures: Contact ATC by telephone when on the ground to obtain clearance.

ii. In the case of (b) pilots may attempt to contact ATC via RTF to obtain a clearance but if unable to establish two-way communications shall telephone 01224-727159 to pass flight details. A departure clearance will be issued with a departure time window (normally ETD to ETD +5, but will be subject to other traffic). Pilots unable to comply with this time window must telephone the number above to renegotiate the ETD.

b) Pilots must not depart from ARI unless in possession of a departure clearance from ATC.

5 VFR FLIGHTS

a) Pilots intending to conduct survey, inspection or photographic flights within Aberdeen CTR are requested to contact Aberdeen ATC on 01224-727160 prior to departure.

6 VISUAL REFERENCE POINTS (VRP)

a) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

7 HELICOPTER ROUTES

a) **Arrivals**

Runway 16 in use

Approach	Via	Route
IFR Including Track WHISKEY	HMRI 026 to 086	Track WHISKEY to Hackley Head then as directed by radar to ILS 16.
	HMRI 092 and greater	ADN DME 30 direct to Hackley Head then as directed by radar to ILS 16.
VFR/Special VFR	HMRI 026 to 086 plus Sumburgh	Track WHISKEY to Hackley Head - cross Hackley Head not above 1000 FT* - direct to join circuit.
Including Track WHISKEY	HMRI 092 only	30 NM - direct Hackley Head cross Hackley Head not above 1000 FT* - direct to join circuit.
	HMRI 092 and greater	30 NM - direct to GORSE then BOD. Cross BOD not above 1500 FT then join circuit. (*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.)

Runway 34 in use

Approach	Via	Route
IFR Including Track ECHO	HMRI 026 to 086 HMRI 092 and greater	Track ECHO to GORSE then as directed by radar to ILS 34. ADN DME 30 direct to GORSE then as directed by radar to ILS 34.
VFR/Special VFR Including Track ECHO	HMRI 026 to 062 plus Sumburgh HMRI 068 to 086 HMRI 092 and greater	Track ECHO to ATSIB (572629N 0014337W) - VANOR (571408N 0020304W). Cross VANOR not above 1000 FT* pass south of Corby Loch to join circuit. 30 NM direct to ATSIB (572629N 0014337W) - VANOR (571408N 0020304W). Cross VANOR not above 1000 FT* pass south of Corby Loch to join circuit. 30 NM - direct to GSE then to BOD. Cross GSE not above 1500 FT then join circuit. (*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.)

b) **Departure**

Runway 16 in use

Standard Departure	Route	Altitude	HMRI
SPIKE IFR	After noise abatement, turn left to VANOR, then to SPIKE. After SPIKE, route via Track ECHO to intercept HMRI.	Cross VANOR at 3000 FT.	For HMRI 023 to 053 and Sumburgh.
SHRUB IFR	After noise abatement, turn left to SHRUB. After SHRUB intercept HMRI at 40 NM.	Climb to 3000 FT level by the coast.	For HMRI 059 to 101.
GORSE IFR	After noise abatement turn left to Bridge of Don then to GORSE, then to intercept the HMRI at 40 NM.	Cross BOD 3000 FT.	For HMRI 107 and greater.
ATSIB VFR/Special VFR	After noise abatement, turn left to pass south of Corby Loch via VANOR to ATSIB. Traffic for HMRI 045 to 104 route direct from ATSIB to intercept HMRI at 40 NM, north of HMRI 045 follow track ECHO to intercept HMRI.	Not above 1000 FT* to VANOR. After VANOR not above 1000 FT* or as directed by ATC. (*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance).	For HMRI 101 and less including Sumburgh.
GORSE VFR/Special VFR	After noise abatement, turn left to Bridge of Don then to GORSE, then to HMRI at 40 NM.	Not above 1500 FT to Bridge of Don. After Bridge of Don not above 1500 FT or as directed by ATC.	For HMRI 107 and greater.

Runway 34 in use

Standard Departure	Route	Altitude	HMRI
PETOX IFR	After noise abatement turn right to PETOX, to intercept the HMRI radial south of PETOX, or after PETOX via track WHISKEY to intercept the HMRI, or continue on track to Sumburgh.	Intercept the HMRI radial at 3000 FT or cross PETOX at 3000 FT.	For HMRI 071 and less.
Forties IFR	After noise abatement, turn right to NOBAL, After NOBAL intercept the HMRI at 40 NM DME.	Cross NOBAL at 3000 FT.	For HMRI 077 and greater.
SPIKE VFR/Special VFR	After noise abatement turn right to Hackley Head then direct to SPIKE then track ECHO to HMRI (or HMRI enroute to SPIKE).	Not above 1000 FT* to Hackley Head. After Hackley Head not above 1000 FT* or as directed by ATC. (*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.)	For HMRI 071 and less, including Sumburgh.
HACKLEY VFR/Special VFR	After noise abatement turn to Hackley Head to HMRI at 40 NM.	Not above 1000 FT* to Hackley Head. After Hackley Head not above 1000 FT* or as directed by ATC. (*Note: 1500 FT at night, subject to the issue of an appropriate ATC clearance.)	For HMRI 077 and greater.

8 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the Aberdeen area of responsibility, but intending to remain outside Class D airspace within the area bounded by the following coordinates and maintaining a listening watch only on Aberdeen Radar frequency, 119.055 MHz, are encouraged to select SSR code 4270.

564236N 0022113W - thence clockwise by the arc of a circle radius 30 NM centred on 571209N 0021153W to 573600N 0013814W - 564236N 0022113W.

b) Selection of 4270 does not imply the receipt of an ATC service. Pilots of aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the Class D airspace at all times.
c) Whilst squawking 4270, pilots should be aware that Aberdeen Radar may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 4270 shall be deselected.

9 LOSS OF COMMUNICATION PROCEDURES

a) In the event of a complete radio communications failure in an aircraft the pilot is to adopt the appropriate procedures detailed at ENR 1.1, subsection 3.4, except as detailed below.
b) If complete radio communications failure in the aircraft occurs during initial approach under radar direction, the procedures to be followed are detailed on the Chart at AD 2.EGPD-5-1.
c) If complete radio communications failure in the aircraft occurs during intermediate or final approach under radar direction, the procedures to be followed are detailed on the Chart at AD 2.EGPD-5-1.
d) If complete radio communications failure in the aircraft occurs following a missed approach, the procedures to be followed are detailed below:

i. RNP RWY 16: Climb straight ahead to 2500 FT, then turn left to VOR ADN at 2500 FT.

Instrument approach procedures to attempt a new approach from VOR ADN:

1. AD 2.EGPD-8-1 INSTRUMENT APPROACH CHART ILS/DME RWY 16 - ICAO
2. AD 2.EGPD-8-2 INSTRUMENT APPROACH CHART LOC/DME RWY 16 - ICAO
3. AD 2.EGPD-8-4 INSTRUMENT APPROACH CHART VOR/DME RWY 16 - ICAO

ii. RNP RWY 34: Climb straight ahead to 2500 FT, then turn right to NDB(L) ATF/DOWNI at 2500 FT.

Instrument approach procedures to attempt a new approach from NDB(L) ATF/DOWNI:

1. AD 2.EGPD-8-5 INSTRUMENT APPROACH CHART ILS/DME RWY 34 - ICAO
2. AD 2.EGPD-8-6 INSTRUMENT APPROACH CHART LOC/DME RWY 34 - ICAO
3. AD 2.EGPD-8-8 INSTRUMENT APPROACH CHART VOR/DME RWY 34 - ICAO
4. AD 2.EGPD-8-9 INSTRUMENT APPROACH CHART NDB(L)/DME RWY 34 - ICAO

iii. All other instrument approach procedures: See instrument approach chart appropriate to the procedure being flown.

INTENTIONALLY BLANK

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL **2122**
HEIGHTS IN FEET AGL (1056)

ABERDEEN/DYCE

For **MINIMUM INITIAL ALTITUDE** see EGPD 5-2.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft*, and

b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.

*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2500**, or last assigned level if higher, to **ADN VOR** or **NDB(L) ATF** as appropriate to the procedure being flown§.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure† to **ADN VOR** or **NDB(L) ATF** as appropriate to the procedure being flown§.

† See Loss of Communication Procedures in EGPD AD 2.22 Flight Procedures.

§ In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL055, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**

CHANGE (13/26): FOOTNOTE SYMBOLOGY CORRECTED.

AERO INFO DATE 06 OCT 26

AD 2-EGPD-5-1

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

ABERDEEN/DYCE

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2000** in the sector defined by the lateral limits; 572823N 0021953W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572101N 0015803W - 570903N 0015030W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 565810N 0015518W - 571838N 0021602W - 572823N 0021953W.

b) **2300** in the sector defined by the lateral limits; 572525N 0022935W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572823N 0021953W - 571838N 0021602W - 565810N 0015518W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 565533N 0020835W - 570410N 0021455W - 572525N 0022935W.

c) **2800** in the sector defined by the lateral limits; 571453N 0023307W thence clockwise by an arc of a circle radius 10NM centred on 571838N 0021602W to 572525N 0022935W - 570410N 0021455W thence clockwise by an arc of a circle radius 14.5NM centred on 571838N 0021602W to 570527N 0022702W - 571453N 0023307W.

d) **3100** in the sector defined by the lateral limits; 570527N 0022702W thence anticlockwise by an arc of a circle radius 14.5NM centred on 571838N 0021602W to 570410N 0021455W - 565533N 0020835W thence clockwise by an arc of a circle radius 10NM centred on 570532N 0020740W to 570224N 0022504W - 570527N 0022702W.

Further descent to **1300** may be given within the Approach Areas shown when on 40° leg or Final Approach.

CHANGE (12/26): AREA D MIN ALT REVISED.

	FT/MIN	850	740	640	530	430

ALTERNATIVE PROCEDURE BASE TURN REVERSAL
From VOR ADN fly outbound on QDR 154° (CAT A,B) or QDR 145° (CAT C,D) **not below 4000**. At ADN DME 12 descend to **not below 2500**. At ADN DME 17.4 (I-ABD D10) turn right to intercept FAT. When established continue as for main procedure.

NOTES
1 FAT offset 1.8° west of RWY 34 C/L.
2 Note FAT passes 0.15NM west of DOWNI.
3 I-ABD DME and ADN DME not co-located. Ensure correct range cross check is used for the DME received.

CHANGE (12/26): DIRECT ARRIVAL REMOVED. PAGE RENUMBERED.

EGJA AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use governed by regulations applicable to Channel Islands CTR.
b) All aircraft using Alderney Airport and its facilities must comply with the requirements of the United Kingdom Civil Aviation (Insurance) Regulations 2005 and any future published amendments to these Regulations.
c) The use of the aerodrome is subject to 'Airport Terms and Conditions of Use'. These are available from Airport Administration, Tel: 01481-227766 or on the Guernsey Airport website (www.guernsey-airport.gov.gg).
d) The Director of Civil Aviation for the Bailiwick of Guernsey has issued Exemptions from the Air Navigation (Bailiwick of Guernsey) Law 2012 authorising operations in Bailiwick of Guernsey airspace including Guernsey and Alderney Airports, by home-built aircraft registered in ECAC Member States, and non-home-built aircraft registered in the UK, Ireland and France, operating on a National airworthiness certificate. (Separate exemptions extend the effect to Jersey Airport and Jersey Airspace).

   Note that the exemptions do not exempt the pilot or operator from obtaining permission from Jersey ATC for flight in the Channel Islands Control Zone, from Guernsey ATC for flight in Guernsey airspace and use of Guernsey and Alderney Airports, or from the requirement to carry a transponder whilst flying within the Channel Islands Control Zone.
e) On arrival, pilots and passengers of all General Aviation aircraft must report to Flight Clearance to carry out Special Branch and Customs clearance.
f) All commercial flights and aircraft over 4 tonnes MTOW using Alderney Airport are required to use the services of a handling agent.

g) The operator of an aircraft carrying dangerous or hazardous cargo must notify the Aerodrome Fire Service, Tel: 01481-822551 prior to the arrival of the aircraft or before loading of cargo prior to departure from the aerodrome. The carriage of such cargo is subject to a permission granted under the Air Navigation (Bailiwick of Guernsey) Law 2012.
h) All aircrew and persons employed at Alderney Airport whilst airside, are required to wear high visibility clothing at all times. Aircrew wearing high visibility clothing must escort passengers (not wearing high visibility clothing) to and from their aircraft. Pilots in charge of aircraft are responsible for ensuring that their crew and passengers comply with these requirements.
i) Due to restricted apron parking all aircraft requiring parking on the hard apron must request prior permission, Tel: 01481-822851. This does not apply to locally based aircraft and scheduled services.
j) In respect of Aerodrome Operating Minima, the notified method of calculating Aerodrome Operating Minima for the purposes of the Air Navigation (Bailiwick of Guernsey) Law 2012 shall be that published in the UK AIP, Section AD 1.1 subsection 4, Aerodrome Operating Minima.
k) Applications for civilian formation flights in Special VFR within the CI Control Zone should ideally be made in writing or by e-mail to Jersey ATC Operations (atc.ops@jerseyairport.com) ideally with a minimum of seven days notice. Short notice application may be made to the Jersey ATC Watch Manager, Tel: +44 (0)1534-446086.

2 GROUND MOVEMENT

a) Grass Taxiway A and light aircraft parking area connects apron to Runway 21 threshold and is also used as a taxiway route from other runways to apron.
b) To prevent hazards to taxiing aircraft all chocks and picketing blocks should be removed to the edge of the parking area after use.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Arriving and departing aircraft on Runway 08/26 may observe a white RVR light at the upwind end of the runway, in the approach lights when the runway edge lights are on.
b) Caution advised due to turbulence caused by nearby cliffs.
c) Low boundary fence installed short of Runway 03 and 31 thresholds showing orange/white markers.
d) Due to coastal location, birds, including a large number of pheasants on the aerodrome, are a hazard throughout most of the year. This hazard level is raised during the migration season.
e) The aerodrome boundary fence 0.9 M high to the north and south of Runway 08/26 between the 08 threshold and the intersection with Runway 13/31 is within the runway strip.
f) The aerodrome boundary fence 0.9 M high to the north and south of Runway 08/26 between the 26 threshold and the intersection with Runway 03/21 is within the runway strip.
g) In Approach/Take-off Areas Obstruction: 26/Approach 08/Take-off Track 303 FT AMSL 494228.98N 0021228.78W.
h) Runway 08/26, between the thresholds of the runway, standing water may be present in excess of 3 MM in depth during and after periods of rain.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

a) Pilots are advised to take particular note of the following - Grass Runways 03/21 and 13/31 have undulations across the entire length and width. The surface of both grass runways is rough and uneven.

7 TRAINING

a) Circuit training must be booked in advance with Alderney Tower Tel: 01481-822851.
b) Instrument training must be booked in advance with Guernsey Approach Tel: 01481-227766, ext 2130.
c) A request message in item 18 of an FPL does not constitute a request for training.

EGJA AD 2.21 NOISE ABATEMENT PROCEDURES

a) All aircraft must conform to the following procedures, which may be departed from only to the extent necessary for avoiding immediate danger.

   i. Every operator using the airport shall ensure that at all times aircraft are operated in a manner calculated to cause the minimum disturbance practicable over all parts of the Island. In particular pilots will avoid overflying St Annes below 700 FT AAL.
   ii. Circuit procedures - Standard circuit height for joining and training is 700 FT AAL. Circuit training only permitted on Runways 08/26 and 13/31 and whenever possible, circuits to be confined to the West of 13/31 or South of 08/26.
   iii. Unless otherwise authorised or instructed by Air Traffic Control the above procedures shall apply to all aircraft approaching, landing, going around or taking-off in accordance with Air Traffic Control clearance and shall apply in both VMC and IMC.

EGJA AD 2.22 FLIGHT PROCEDURES

1 RADIO COMMUNICATION FAILURE PROCEDURES

a) In the event of complete radio communication failure in an aircraft, the pilot will adopt the appropriate procedure notified at ENR 1.1.
b) Radio Failure in the Circuit

i. The pilot of an aircraft in the circuit experiencing radio failure should set the transponder code to 7600, and make one orbit away from the airfield. At the end of the downwind leg, proceed to final and land, providing the runway is clear.
ii. The pilot of an aircraft on base leg or final, having been cleared to final when the failure occurs, should, if time permits, change code to 7600, continue the approach and land, providing the Runway is clear.
iii. The pilot of a non transponder equipped aircraft should adopt the same procedure as in i, or ii.

2 INBOUND/OUTBOUND PROCEDURES

a) Arrival routes at AD 2-EGJA-7-1 may be varied at the discretion of ATC.
b) Procedures for Outbound Aircraft.

i. Standard Outbound Routes to Airways.
ii. Standard departure routes for aircraft joining the airways system are detailed below.

Departures to	Via	Route
North	Q41	ORTAC - THRED
North East	G271	AGANO[3] - GULDA - BENIX[1]
East	N160	AGANO[3] - LUSIT - CAN[2]
South East	V20	ORVAL - UPALO
South	R14/A25	MINQI - DIN
South West	G27	LERAK - BADUR
West	N160	TUNIT - LIZAD
North West	N862	SKERY - BHD

Note 1: *For airfields East of London. Flights inbound to EGLC may route via ORTAC.*

Note 2: *Not available above FL 90.*

Note 3: *Position of AGANO - 493954N 0020000W.*

c) Aircraft Outbound to the FIR

i. IFR flights wishing to leave the Channel Islands Control Zone to enter the London or Brest FIR's will normally be cleared by the most direct route consistent with the current traffic situation.
ii. VFR and Special VFR flights will normally be instructed to route via/to one of the Visual Reference Points, as detailed at EGJJ AD 2.22 and AD 2-EGJJ-3-1.

3 VFR FLIGHT

a) A flight plan must be filed for all flights within and intending to transit the Channel Islands CTR.
b) VFR clearance to operate within the Alderney ATZ will not be granted if the reported visibility is less than 5 KM or the reported cloud ceiling is less than 1500 FT in accordance with SERA.5001.
c) Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
d) Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5001. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
e) VFR Flights may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

4 SPECIAL VFR FLIGHT

a) Prior Permission

i. A flight plan must be filed for all Special VFR flights in the Channel Islands CTR.
ii. Special VFR clearances for flights within the Channel Islands CTR may be requested and will be given whenever traffic conditions permit. Special VFR flights within the Alderney ATZ will be subject to the general conditions laid down for Special VFR flights in SERA.5010. Pilots must note that the Channel Island Director of Civil Aviation has not adopted the SERA derogations issued by the United Kingdom, and therefore they do not apply in Channel Island Airspace.
iii. The use of Special VFR clearances is intended to be limited to light aircraft which cannot comply with full IFR requirements and wish to proceed to or from an aerodrome within or to transit the Channel Islands CTR.

b) Special Routes

i. Aircraft operating in accordance with Special VFR will normally be cleared via the published VRPs or on tracks to/from adjacent aerodromes or navigation aids, or as per flight planned route.
ii. Special VFR may be subject to delay when they cannot be fitted readily into the main traffic flow. Pilots should, therefore, always ensure that they have adequate fuel reserves and are able to divert to alternate aerodrome if necessary.

c) Weather Minima

i. Aircraft shall be given a radar service whilst within Channel Islands Airspace. It is the responsibility of the pilot to comply with minimum VMC criteria in accordance with SERA.5010. Pilots must inform the Radar Controller if compliance with the above entails a change of heading or height.
ii. Special VFR clearances to operate within the Alderney ATZ will not be granted to a fixed wing aircraft if the reported visibility is less than 1500 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iii. Special VFR clearances to operate within the Alderney ATZ will not be granted to a helicopter if the reported visibility is less than 800 M or the reported cloud ceiling is less than 600 FT (SERA.5010).
iv. The Director of Civil Aviation has approved the issue of Special VFR clearances at night.

5 SARK RESTRICTED AREA

a) Pilots are to note that flight is not permitted at a height of less than 2000 FT above ground level within 3 NM of 492546N 0022145W on the Island of Sark (EGR095) except with the permission of the Channel Islands Director of Civil Aviation or from Guernsey ATC as necessary.

6 FLIGHT PLANS

a) See ENR 1.11.

7 CARRIAGE AND OPERATION OF SSR TRANSPONDERS

a) The carriage and operation of SSR transponder equipment with the following capability is mandatory when flying within the Channel Islands CTR, CTA or TMA:

i. when operating as a VFR or Special VFR Flight;
ii. when operating under IFR - Mode A 4096 codes and Mode C with altitude reporting capability.

b) Exemptions from the requirements may be given in the following circumstances:

i. for notified agreed events such as air rallies etc., applications for exemption must be made in writing to Manager - Air Traffic Control, Jersey Airport, Channel Islands, Email: atc@jerseyairport.com at least one calendar month before the event;
ii. for short notice exemptions, applications must be made to the Watch Supervisor, Jersey Airport, Tel: 01534-446086 giving full details. Such exemptions will not normally be granted unless it is considered that exceptional circumstances exist.

ATC SURVEILLANCE MINIMUM ALTITUDE CHART - ICAO

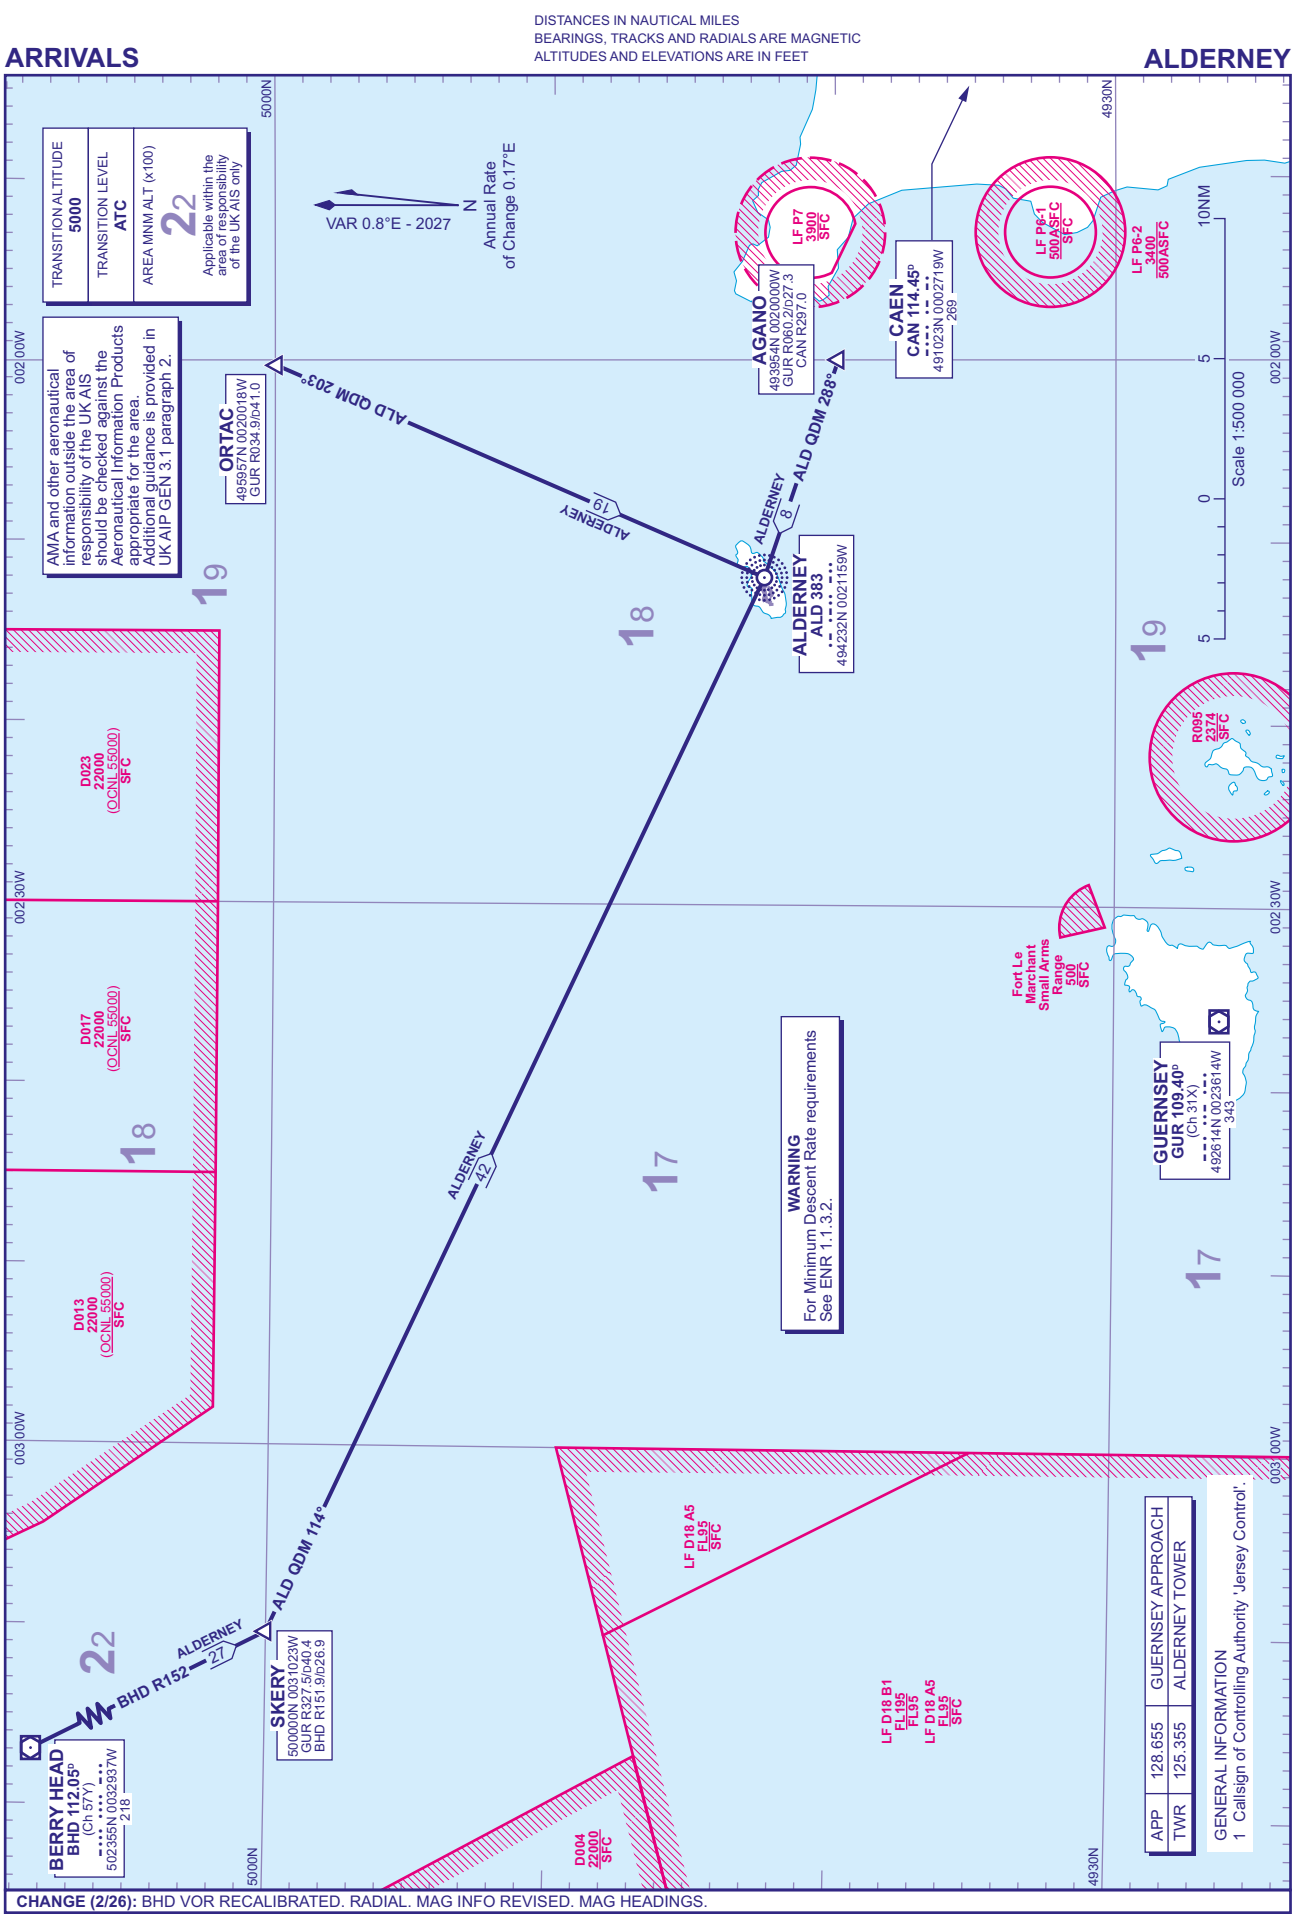
BEARINGS, TRACKS AND RADIALS ARE MAGNETIC
ELEVATIONS IN FEET AMSL 812
HEIGHTS IN FEET AGL (464)

ALDERNEY

MINIMUM INITIAL ALTITUDE
Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the radar controller is **1500** in the sector defined by the lateral limits;
493129N 0025341W - 494705N 0022941W thence clockwise by an arc of a circle radius 8NM centred on 494125N 0022058W to 494919N 0022301W - 495113N 0020710W thence clockwise by an arc of a circle radius 8NM centred on 494320N 0020510W to 494850N 0015613W - 494401N 0020000W - 493607N 0020000W - 492038N 0022007W thence clockwise by an arc of a circle radius 8NM centred on 492618N 0022846W to 491818N 0022821W - 491751N 0024431W thence clockwise by an arc of a circle radius 8NM centred on 492551N 0024458W to 493129N 0025341W.

OUTSIDE THE DESIGNATED APPROACH SURVEILLANCE MINIMUM ALTITUDE AREA
The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:
a) within 5NM of the aircraft*, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track*.
*When the aircraft is within 15NM of the radar antennae, the 5NM in a) and the 15NM in b) may be reduced to 3NM and 10NM respectively.



LOSS OF COMMUNICATION PROCEDURES
Initial Approach
Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **2000**, or last assigned level if higher to **ALD NDB(L)**†.
Intermediate and Final Approach
Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **ALD NDB(L)**†.
† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.

GENERAL INFORMATION
1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights area shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA. 5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart should only be used for the cross-checking of assigned altitudes whilst in receipt of an ATC Surveillance service.**

EGSL AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Aerodrome is not available at night for public transport flights. Use at night by aircraft required to use a licensed aerodrome is confined to operations by Andrewsfield Aviation Ltd using RWY 27.

2 GROUND MOVEMENT

Not applicable.

3 CAT II/III OPERATIONS

Not applicable.

4 WARNINGS

a) Aerodrome is located on the eastern edge of the Stansted CTR and below the Stansted CTA. See AD 2-EGSS 2.17.
b) Helicopter hovering operations take place south of Runway.

5 HELICOPTER OPERATIONS

Not applicable.

6 USE OF RUNWAYS

Not applicable.

7 TRAINING

Not applicable.

EGSL AD 2.21 NOISE ABATEMENT PROCEDURES

Noise abatement procedures in force. Obtain brief before departure.

EGSL AD 2.22 FLIGHT PROCEDURES

a) Circuit height 700 ft QFE, normal direction: Runway 09/27 - RH. Microlight circuits at 500 ft QFE inside the normal circuit pattern.
b) Andrewsfield Local Flying Area (LFA) and Procedures:

i. Part of the Andrewsfield ATZ (to the northwest of the Aerodrome) lies within the London Stansted CTR and the remainder lies partly within and partly beneath the London Stansted CTA. Subject to any listed restrictions, flights without reference to Stansted ATC may be made within the confines of the LFA.
ii. An LFA exists within the same lateral limits as the ATZ with a vertical limit of 1500 ft QNH. Aircraft shall remain clear of cloud, in sight of the surface and in a flight visibility of at least 3 km;
iii. Irrespective of whether they are in communication with Stansted ATC or not, aircraft that intend to penetrate the LFA during the hours of operation of the Andrewsfield A/G station, must not do so without first obtaining information from the Andrewsfield A/G station.

EGPR AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Use of Barra aerodrome is subject to standard Terms and Conditions of Use, which can be requested from the aerodrome.

2 GROUND MOVEMENT

a) Marshalling is not available and aircraft have to self park.

3 CAT II/III OPERATIONS

Not applicable

4 WARNINGS

a) The landing and take-off areas may be considerably ridged by hard sand and contain pools of standing water. These are potential hazards to aircraft.
b) The bearing strength, braking action and contamination of the beach is unknown, variable and unpredictable.
c) Some downdraughts may be experienced at the western end of Runway 07/25 in strong wind from the west through south.
d) Pilots should be aware that cockling activities frequently take place between the runway markers and the tide-line. Both pedestrian and vehicular activity may occur and from the air may appear to infringe the runway thresholds during published aerodrome opening hours. This activity is closely monitored by FIS. A flashing white light on top of the Control Tower advises the local Cocklers that an aircraft movement is imminent and is in no way to be used as a navigational aid by aircrew.
e) High ground rising to 338 FT AMSL 0.75 NM to the north.

   High ground rising to 294 FT AMSL 2.2 NM to the northeast.

   High ground rising to 680 FT AMSL within 1.5 NM to the south.

   Telegraph wires 20 FT AMSL, adjacent to the western boundary of the landing area.

   Obstacle protected surfaces are infringed by high ground up to 700 FT AMSL between the south and west, and to a lesser extent by high ground up to 340 FT AMSL to the north of the aerodrome. The minima of 3 KM visibility and cloud base of 1000 FT AAL must therefore be strictly adhered to, except where an AOC holder has a less restrictive State authorised approach minima. Pilots must be able to see and avoid obstacles on take-off and landing.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Runway departure restriction for aircraft requiring the use of a licensed aerodrome:

   i. Runways 07/25, 10/28 and 14/32. Except where an AOC holder has a less restrictive State authorised take-off minima, departures when the reported MET visibility is 800 M or less are not permitted.

6	MET Briefing Office	H24
7	ATS	H24
8	Fuelling	AVGAS 100LL: 0900-1700 (0800-1600). AVTUR JET A-1: H24 (North Air and Global Trek Aviation).
9	Handling	HAE, Swissport and Global Trek Aviation: H24. EAC: 0900-1700 (0800-1600). Woodgate Executive Air Charter (UK) Ltd: 0900-2000 (0800-1900); and by prior arrangement. Jet Assist: H24 by prior arrangement.
10	Security	H24
11	De-icing	As required.
12	Remarks	Fuelling: Woodgate Executive Air Charter H24 fuel callout, Tel: 028-9442 2478.

EGAA AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	A range of cargo handling equipment is available up to B747-400 and AN124 aircraft. Full details may be established with the relevant ground handling agents noted at paragraph 7 of this section.
2	Fuel and oil types	AVTUR JET A-1, AVGAS 100LL W80
3	Fuelling facilities/capacity	-
4	De-icing facilities	Available from: HAE and Swissport.
5	Hangar space for visiting aircraft	-
6	Repair facilities for visiting aircraft	Limited for light aircraft only.

7	Remarks	All operators, including Executive and Private General Aviation, must make prior arrangements with a handling agent for ground handling of all flights. Designated handling agents are: Commercial Aircraft: HAE Tel: 028-9445 9449; Fax: 028-9445 9905. Swissport: Tel: 028-9448 4608; Fax: 028-9442 2010. General Aviation and Private Jet Aircraft: EAC: Tel: 028-9448 4938; Tel: 028-9442 2478 (call out); Fax: 028-9445 2649; 0900-1700. Jet Assist: Tel 028-9442 2646 (24 HR); Fax: +44 28-9442 2640. Email: ops@jetassist.co.uk VIP/Military/Ferry/Tech stops: Global Trek Aviation: Tel: 028-9445 4546, 07479-202260 (Mobile); Email: bfs@globaltrekaviation.com; Website: www.globaltrekaviation.com AVGAS 100LL purchased from Woodgate Air Charter can only be made using cash or credit card. Air BP carnet not accepted.

EGAA AD 2.5 PASSENGER FACILITIES

1	Hotels	On Airport.
2	Restaurants	Buffets.
3	Transportation	Buses, Taxis and car hire. Nearest railway station Antrim, 7 miles.
4	Medical facilities	Limited first aid.
5	Bank and Post Office	Bureau de Change.
6	Tourist Office	In Terminal.
7	Remarks	-

EGAA AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 RFF Category 8 and 9 available on request. 24 hours prior notice required.
2	Rescue equipment	Air bags and inflation equipment for 15 and 26 tonnes lifting capacity. 2000 x 1000 mm Synthetic Roadway Panel. NLG Turnable Assembly 30 Tonne capacity, Sledge movement system. De-Bogging/Hauling Kit (50 tonne).
3	Capability for removal of disabled aircraft	50,000 kg. Contact 028-9448 4313 (Airport Duty Manager) H24. National airlines and/or the larger independent airlines should plan to fly in appropriate salvage equipment and should be part of the airline pooling arrangement or have other recovery procedures in place. Operators of smaller aircraft or GA aircraft will be required to use the assistance of Executive Air Charter (if they are unable to remove the aircraft themselves) and will be charged accordingly.
4	Remarks	-

EGAA AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Mechanical, Chemical de-icing.
2	Clearance priorities	Standard. See AD 2.20, Paragraph 6, for Runway 17/35 winter sweeping priority.
3	Remarks	-

EGAA AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	EAST APRON Surface: Asphalt PCR 670/R/B/W/U ECHO APRON Surface: Concrete and asphalt - GA APRON Surface: Concrete PCR: 62/R/D/W/U MAIN APRON Surface: Asphalt PCR 670/R/B/W/U WEST APRON Surface: Concrete PCR 670/R/B/W/U
2	Taxiway width, surface and strength	Taxiway A: 23 M Surface: Asphalt PCR 670/R/B/W/U Taxiway B: 23 M Surface: Concrete PCR 670/R/B/W/U Taxiway C: 23 M Surface: Asphalt PCR 670/R/B/W/U Taxiway D: 23 M Surface: Asphalt PCR 670/R/B/W/U Taxiway F: 15 M Surface: Asphalt PCR 670/R/B/W/U Taxiway L: 57 M Surface: Concrete and asphalt PCR 670/R/B/W/U
3	Altimeter checkpoint location and elevation	East Apron 241 FT Main Apron 232 FT West Apron 222 FT GA Apron 248 FT
4	VOR checkpoints	-
5	INS checkpoints	See Parking/Docking Chart
6	Remarks	TWY Foxtrot intersects RWY 17/35 at two positions. The Southern most of these is capable of permitting access/egress to/from DA2 Apron for ACFT up to and including ICAO Code F. Large ACFT may require to make a right-turn onto the TWY, following a turn at the RWY 35 turning circle.

EGAA AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	No automated parking/docking systems installed. Marshalling service is provided at all stands, with follow-me vehicle in place for freight/mail aircraft parking. TWY/Stand guidance lines are compliant with ICAO Annex 14 recommendations Below information indicates max span. Length restrictions exist and will be managed by stand allocation through the Airport Operational Database. Stands 9 - 15 fitted with illuminated stand number indicator boards. Max aircraft size: ICAO Code C Stands 16,17: Max aircraft size - ICAO Code C Stand 16A: Max aircraft size - ICAO Code F Stand 18: Max aircraft size - ICAO Code C Stand 21: Max aircraft size - ICAO Code C+ (B757 capable) Stand 22: Max aircraft size - ICAO Code C Stand 23: Max aircraft size - ICAO Code E Stands 24,25A,25B,26,27,28,29,30: Max aircraft size - ICAO Code C 1x passenger boarding bridge serving Stands 22,23,24 Cargo Stands 1F,2F: Max aircraft size - ICAO Code D Cargo Stands 3F,4F,5F,6F: Max aircraft size ICAO Code C All stands require operators to have pushback capability with their handling agent. General Aviation aircraft may self park on the GAT Apron and/or Delta Apron. Delta Apron houses General Aviation and Private Charter movements. The varying types of aircraft in this area mean that dedicated markings are not available. BIA and Handling agents will cooperate to ensure safety is maintained during parking operations.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 07/25: Runway designation, threshold, centre-line, edge lines and aiming point markings on Runway 07/25. Touchdown zone markings on Runway 07/25. Yellow lead-off lines from Runway 25 onto Taxiways B, D and J and from Runway 25 onto Runway 35 at the runways intersection. Yellow lead-off lines from Runway 07 onto Taxiways A and B. Runway Taxi Holding Position markings at the intersection of Runways 07/25 and 17/35, 150 M from the centre-lines of the cross runway. 17/35: Runway designation, threshold, centre-line, edge lines and aiming point markings on Runway 17/35. Touchdown zone markings on Runway 17. Yellow lead-off lines from Runway 17 onto Taxiways F, J and Echo Apron. Yellow lead-off lines from Runway 35 onto Taxiways C, F, J and Echo Apron. Runway Taxi Holding Position markings at the intersection of Runways 07/25 and 17/35, 150 M from the centre-lines of the cross runway. Runway light(s): Alternate green/yellow lead-off lights from Runway 25 onto Runway 35, along with Taxiways B, D and J. Alternate green/yellow lead-off lights from Runway 07 onto Taxiways A and B. Alternate green/yellow lead-off lights from Runway 35 onto Taxiway C. Taxiway marking aid(s): Yellow centre-line and holding position on all taxiways. Taxiway light(s): Green centre-line lighting on Taxiways A, B, C, D, J and L. Blue edge lights on B, F and L (south side). Runway guard lights at runway holding positions.

3	Stop bars and runway guard lights (if any)	Alpha Taxiway stop bars at A1, A2, A3; Bravo Taxiway one stop bar; Charlie Taxiway stop bars at C1, C2; Delta Taxiway stop bars at D1, D2; Foxtrot Taxiway one stop bar; Juliet Taxiway stop bars at J1, J2; Echo Apron one stop bar.
4	Other runway protection measures	-
5	Remarks	Aircrew should note that the marshalling service is provided by BIA or their handling agents trained personnel. However, it still remains the responsibility of aircrew to satisfy themselves that the stand is safe for entry and parking. 3 illuminated wind direction indicators at 17, 25 and 35 thresholds.

EGAA AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Mandatory handling applies for all operators, including non-based visiting aircraft.
b) Use governed by regulations applicable to Belfast CTR.
c) Use of this airport by aircraft not able to communicate with ATC by radio subject to prior permission.
d) Aircraft using Belfast International Airport are to carry third party insurance cover of not less than £3,000,000.
e) All commercial air transport operators should submit details of proposed flights and schedules to Airport Co-ordination Ltd, who act as agents on behalf of Belfast International Airport for this purpose. Tel: 0161-493 1850, Fax: 0161-493 1853, e-mail: LONACXH@acl-uk.org.
f) Belfast International Airport will waive charges for GA pilots in the case of genuine emergency or precautionary diversion landings. This concession applies to GA aircraft under 3 tonnes not flying for hire or reward, not having planned or intended Belfast International Airport as their destination or alternate.
g) To comply with EU Regulations, PRM requirements should be pre-notified 48 HR in advance to SITA BFSOCCR or OCS.PRM@bfs.aero or 028-9448 4957.
h) Due to limited aircraft stand availability, aircraft wishing to divert to Belfast International Airport may not be accepted, except in an emergency.

2 GROUND MOVEMENT

a) Aircraft engine running area is available by arrangement with the airport authority, however, engine runs are not permitted after 2300 (2200). Contact the Airport Duty Manager for details.
b) Apron Layout.

i. The arrangement of the apron stands showing stand numbers, is as shown on the plan at page AD 2-EGAA-2-2.
ii. Executive/Corporate/GA domestic and international aircraft over 2000 KG AUW will be allocated a stand on arrival.
iii. Aircraft who are allocated a stand should not enter the stand unless under guidance from ground staff.
iv. Aircraft below 2000 KG AUW will park, normally self manoeuvring, on the GA Apron or as directed.
v. Aircraft pushback procedures in progress on main Apron. Pilots will be instructed by ATC to push to a nominated position. Pilots are to pass the nominated position to the push back Team. Nominated positions are X-ray, Yankee, Zulu, Lima 1, Lima 2 Lima 3, Lima 4, Lima 5, Lima 6 and Lima 7.
vi. Aircraft taxiing from position Zulu should use minimum power until established on Taxiway Lima.
vii. When requesting start-up or push-back pilots should give the full call sign, type and stand number. Aircraft must be ready in all respects to start and if necessary push-back before calling on the appropriate frequency. Pilots should only request push-back when they are fully ready to do so.
viii. When requesting push-back clearance, pilots are to inform ATC if headset communication with ground crew is not established. Push back clearance must not be requested until the ground crew has confirmed to the flight deck that the aircraft is closed up and the tug is manned and fully ready to move.

c) Departing aircraft should report ready for departure.
d) International GA Flights including flights originating in the Republic of Ireland

i. Arrivals.

Flights will be parked for examination on the GA Apron Customs Examination Station as directed.

ii. The law requires that Pilots must present their aircraft and contents for Police and Border Force inspection on arrival.

e) Due to apron pushback procedures, prior permission is required from ATC for aircraft to vacate Runway 07/25 at Taxiway Bravo.
f) Aircraft of Boeing 737/Airbus 319 size or greater are not permitted to carry out 180° turns after landing on Runway 17. Aircraft should continue to the 35 turning circle.
g) IFR Procedural Standard Arrival Routing Runway 25

i. All IFR arrivals on Runway 25 which are planned to park at the main terminal should, after landing, and without instruction, vacate right onto Runway 35, right onto Taxiway Charlie and unless further ATC taxi clearance has been issued hold at holding point C2. ATC shall issue further progressive taxi instructions once the aircraft has vacated Runway 25.

Note: *This does not prevent either ATC from issuing alternate tactical instructions as required or the pilot vacating tactically as circumstances dictate.*

h) Two steel plates cover bad ground on Taxiway Bravo centreline. One 18 M south of Bravo Hold and one 18 M north of Bravo Hold.

3 CAT II/III OPERATIONS

a) Runway 25, subject to serviceability of the required facilities is suitable for Category II/III Operations by Operators whose minima have been accepted by the Civil Aviation Authority.
b) During Category II/III operations, special ATC procedures (ATC Low Visibility Procedures) will be applied. Pilots will be informed when these procedures are in operation by Arrival and Departure ATIS or by RTF. Pilots can expect a flow rate of 10/60 for arrivals and 10/60 for departures

c) Departing Aircraft - Runway 25

i. ATC will request departing aircraft to hold at the Category II/III Hold on Alpha.
ii. If Taxiway Alpha is out of service departing aircraft will be required to backtrack Runway 25 from Taxiway Bravo and execute a 180° turn on 25 Threshold.

d) Arriving Aircraft

i. Landing clearance or go around instructions will be given no later than 2 NM from touchdown.
ii. Runway 25, where it intersects with Runway 35, is fitted with CAT II/III ground lighting and arriving aircraft may be instructed to vacate there.
iii. Backtracking on Runway 25 is not normally permitted. However if Taxiways Charlie or Delta are out of service aircraft will be instructed by ATC to use Category II/III ground lighting at Bravo to vacate Runway 25. Arriving aircraft will be under instruction from ATC:

1. Continue to the end of Runway 25;
2. Execute a 180° turn;
3. Backtrack the runway and vacate on to Taxiway Bravo;
4. Report established on Taxiway Bravo and constant taxiway green lights in sight.

e) Runway 25 is suitable for Lower than Standard Category I operations subject to the ILS radiating at CAT III and LVPs being declared in force by ATC, by Operators whose minima have been accepted by the Civil Aviation Authority.

4 WARNINGS

a) Except for light signals, ground signals are not displayed.
b) Bird scaring at times may only be carried out on the runway in use. In these circumstances, ATC will inform pilots of the bird scaring action notified to them by the Airport Authority.
c) Model aircraft flying takes place at Nutts Corner, a disused aerodrome situated 3 NM Southeast of Aldergrove. Flying takes place on a daily basis during daylight hours up to a maximum of 400 FT AGL.
d) Security fence east of Taxiway Foxtrot infringes Runways 17 and 35 strip by 3.8 M and 4.7 M.
e) Hazardous accumulations of whooper swans, and small gulls at Langford Lodge unlicensed aerodrome 3.5 KM southwest of the aerodrome may pose a risk to aircraft landing and taking off on Runway 07.
f) Apron stands 9 to 15 slopes are compliant along their east west axis, but deviates from CAP 168 criteria along the north south axis in that the slope from south to north varies from 1 in 93 to 1 in 55.
g) Pilots are warned that unauthorised ground based laser lights may be directed at their aircraft when arriving or departing at EGAA or when over flying the City of Belfast. All incidents should be reported immediately via ATC to the Police.
h) High ground rising to 536.5 M at edge of outer horizontal surface at a distance of 14,650 M from the runway to the south and east.
i) High ground rising to 334.4 M within the outer horizontal surface at a distance of 12,476 M from the runway to the north east.

5 HELICOPTER OPERATIONS

a) Helicopters frequently operate at low level south of Runway 25, but will remain at least 250 M from that runway until further cleared by ATC.
b) Prior permission required by civil helicopters wishing to land at Belfast International Airport due to parking spaces not available. Contact the Airport Duty Manager 0770-3203167.

6 USE OF RUNWAYS

a) In Winter conditions runway anti-icing and snow clearance operations will take priority over all other operations at the discretion of the Airport Authority. ATC will inform pilots of any expected delays. Runway 17/35 and associated taxiways will not normally be de-iced.
b) During winter conditions, Runway Condition Reports (RCRs) will be in operation when Runways 07/25 and 17/35 are contaminated. These condition reports will be in accordance with the ICAO Global Reporting Format (GRF) and will be disseminated via Snowtam and ATIS only.

7 TRAINING

a) Contact Airport Operations Control Centre on Tel: 028-9448 4401 or E-mail: control.centre@bfs.aero.

EGAA AD 2.21 NOISE ABATEMENT PROCEDURES

1 GENERAL

a) Pilots must comply with the procedure detailed below and in particular with reference to speed control.
b) The Continuous Descent Arrival procedure provides pilots with the ATC assistance necessary for them to achieve a continuous descent during intermediate and final approach, at speeds which require minimum use of flap. The procedure is designed to minimise noise disturbance and fuel consumption during the approach phase.

2 ARRIVALS

a) Unless there are valid reasons, the Continuous Descent Arrival procedure is to be employed for all approaches by IFR aircraft to all runways between 2200-0700 (2100-0600).
b) Headings and Flight Levels/Altitudes to leave the holding facility will be passed by ATC. When holding is not necessary, radar vectors may be given prior to the aircraft reaching the holding pattern and descent clearance will include an estimate of track distance to touchdown.
c) Further distance information will be given between initial descent clearance and intercept headings to the ILS. On reciept of descent clearance the pilot will descend at the rate he judges will be best suited to the achievement of continuous descent, the object being to join the glidepath at the appropriate height for the distance without recourse to level flight.
d) Pilots should typically expect the following speed restrictions to be enforced:

i. 220 KT from the holding facility (or if holding is not required, 220 KT by 20 NM from touchdown) during intermediate approach phase;
ii. 180 KT on base leg/closing heading to the ILS;
iii. Between 180 KT and 160 KT when first established on the ILS, and thereafter 160 KT to 4 DME.

e) These speeds are applied for ATC separation purposes and are mandatory. In the event of a new (non-speed related) ATC clearance being issued (eg: an instruction to descend on ILS), pilots are not absolved from a requirement to maintain a previously allocated speed. All speed restrictions are to be flown as accurately as possible. Aircraft unable to conform to these speeds should inform ATC and state what speeds will be used. In the interests of accurate spacing, pilots are requested to comply with speed adjustments as promptly as feasible within their own operational constraints, advising ATC if circumstances necessitate a change of speed for aircraft performance reasons.
f) The term ‘No ATC Speed Restriction’ does not absolve a pilot from flying in accordance with the speeds stated in paragraph d.
g) When the Continuous Descent Arrival procedure is in force and an aircraft is being vectored for a non-precision approach, the pilot will decide to which point he will fly the Continuous Descent Arrival procedure in order to comply with Company Standard Operating Procedures.

3 DEPARTURES

a) During the hours of 2200-0700 (2100-0600), all departures with a MTOW greater than 5700 KG, will climb on the runway track to 2000 FT ALT before commencing any turn, thereafter as per ATC clearance.

EGAA AD 2.22 FLIGHT PROCEDURES

1 ALTIMETER SETTING

a) Pilots flying beneath Belfast TMA below the Transition Altitude (6000 FT should use the QNH of an aerodrome situated within the lateral limits of the TMA; except that the aerodrome QFE may be used when flying within the circuit.

2 PROCEDURES FOR INBOUND AIRCRAFT

a) **Warning**

The attention of pilots is drawn to the existence of Langford Lodge aerodrome. This unlicensed aerodrome, situated 3 NM southwest of Belfast Aldergrove, is provided with crossed Runways 08/26 and 03/21. Pilots making approaches to Belfast Aldergrove, when Runway 07 is in use, should exercise due caution to ensure they have identified the correct aerodrome. The 07 approach and runway lights will be selected 'ON' whenever 07 is in use regardless of weather conditions.

b) **Clearance to enter Belfast TMA and CTR.**

i. Aircraft flying on the Airways System will be cleared into the TMA/CTR without having to request a specific entry clearance.
ii. Aircraft wishing to enter the TMA or CTR from the open FIR, whether IFR or VFR, must obtain clearance from Aldergrove Approach Control.

c) **Standard Routes**

i. The standard initial routes for inbound aircraft, which are shown in the table below, may be varied at the discretion of ATC (eg for traffic reasons or to allow traffic to be sequenced by radar).

Approach from	Via	Route
NE	P600	BLACA - BELZU
E	FIR	BLACA/TMA Boundary - BELZU

Approach from	Via	Route
SE	L10 (RNAV 5 FL 75 and above)	IOM - NELBO - BELZU
	L10 (Below FL 75)	IOM - RINGA - BELZU
	UP6/L46 (RNAV 5)	REMSI - MASOP - NELBO - BELZU
	M146 (RNAV 1 Below FL 255)	ERDUV - LUSOD - PEPEG - ROBOP - IPSET - BELZU
	M147 (RNAV 1 FL 255 and above)	REMSI - UVPOK - NOPKI - MATUT - ROBOP - IPSET - BELZU
S	N34	NEVRI - ABSUN - BELZU
SW, W, NW and N	FIR	TMA Boundary - direct to BELZU

Note: *See also UK Standard Route Document. Available online from NATS/AIS website: http://www.nats.aero/ais.*

d) **Approach Procedures – With Radar Control**

i. When inbound traffic is being sequenced by Radar, the Approach Procedure will be flown under directions from the Approach Radar Controller and will consist of that part of the approach between the Terminal Holding Fix and the Final Approach Path. When holding procedures are not in use, radar sequencing may commence before the Terminal Holding Fix.
ii. Pilots should plan their flight profile in such a manner as to be able to achieve the Minimum Holding Level at the appropriate holding point if so required.
iii. When an aircraft is under Approach Radar Control, changes of heading or Flight Level/Altitude will be made only on instructions from the Radar Controller, except in the case of radio communication failure in the aircraft or at the Radar Unit.
iv. Headings and Flight Levels/Altitudes at which to leave the holding areas will be passed by ATC. Radar vectors will be given and descent clearance will include an estimate of track distance to touchdown. Further distance information will be given between the initial descent clearance and intercept heading to the ILS.
v. Speed Control may be applied on a tactical basis to the extent determined necessary by the Radar Controller. Aircraft unable to conform to the speeds specified by the Radar Controller should inform him immediately and state what speeds will be used. In the interests of accurate spacing pilots are requested to comply with speed adjustments as promptly as is feasible within their own operational constraints, and should advise ATC if circumstances necessitate a change of speed for aircraft performance reasons.
vi. In the event of radar failure, new instructions will be issued to each aircraft under radar control and the procedures as defined for approach without radar control will be put into effect.

e) **Approach Procedures - Without Radar Control**

i. When inbound traffic is not being sequenced by Radar, aircraft will be cleared from the Terminal Holding Facility (VOR BEL) to carry out an Instrument Approach Procedure appropriate to the landing direction.

f) **Holding**

i. The primary holding pattern will be a 1-minute race-track pattern based on VOR BEL as detailed on the Instrument Approach charts.

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) The standard routes for outbound aircraft are detailed in the following table. Routes may be varied at ATC discretion according to the prevailing traffic conditions.

Departing to	Via	Route
SE	L10, Q39	BEL VOR RDL 154° - LISBO - RINGA
	L15, L603, Q38	BEL VOR RDL 154° - LISBO - PEPOD
EGNS	L10	DCT - SLYDA - L10 - IOM - DCT
S	P620	BEL VOR RDL 154° - LISBO
N	P600	BEL VOR RDL 075° - BLACA

Note: *See also UK Standard Route Document. Available online from NATS/AIS website: http://www.nats.aero/ais.*

b) Aircraft must contact ATC no earlier than 20 minutes prior to EOBT to obtain airways clearance including transponder code. As there are no promulgated SIDs for Belfast Aldergrove, ATC will issue specific after departure instructions (typically a RADAR heading or to a designated waypoint), prior to issuing take-off clearance. Pilots must not depart until these instructions have been given and acknowledged.
c) **Warning: Pilots are reminded of the presence of high ground to the east, northeast and southeast of Belfast Aldergrove. It is the pilot's responsibility to maintain adequate terrain clearance.**
d) For ATC purposes, outbound aircraft will normally be required to cross LISBO at or above 4000 FT ALT. Pilots who cannot comply with the necessary climb profile must inform ATC in good time (ie before departure) so that an alternative routing can be coordinated.
e) North Atlantic Jet Departures.

i. Due to the proximity of the Shanwick Oceanic boundary to Belfast Aldergrove, pilots must consider timescales for submitting an 'RCL'. Refer to ENR 2.2, paragraph 3.8.2 for details.

f) Belfast Aldergrove departures via IOM – speed profile:

i. Traffic departing Belfast Aldergrove via L15/Q39 with a requested level of FL 290 or above is required to cross SOSIM/INKOB at FL 290 or above. To ensure that these aircraft can achieve the required level by SOSIM/INKOB speed restrictions are to be observed.
ii. All Belfast Aldergrove departures to the southeast with a requested flight level of FL 290 or above, are to fly in accordance with the following maximum speeds:

1. Jet Traffic with a MTOW greater than 35,000 KG Max 250 KT IAS until FL 100, then Max 290 KT IAS until FL 250;
2. Jet Traffic with a MTOW less than 35,000 KG and all non-jet traffic; Max 250 KT IAS until above FL 250.

iii. Aircraft unable to reach FL 290 by SOSIM/INKOB must advise Belfast Aldergrove prior to push-back, giving the anticipated flight level at SOSIM/INKOB. Specific climb instructions will be issued by Scottish Control.

4 VISUAL REFERENCE POINTS (VRP)

a) To facilitate the integration of VFR flights within the Belfast Airspace, pilots may be required to join/leave the airspace via specified VRPs.
b) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

5 VFR HELICOPTER OPERATIONS WITHIN EGAA CTR

a) **Flight Details**

i. Prior to lifting, the pilot shall book out with Aldergrove ATC by telephone at least ten minutes prior to departure giving call sign and details of flight including ETD. If the ETD varies by ten minutes or more, whether booking out or subject to a full flight plan, then Aldergrove ATC must be informed of the revised ETD.

Note: *The act of booking out does NOT constitute a zone clearance. Clearance must be obtained via RTF from Aldergrove ATC.*

ii. If a flight leaves UK airspace, eg routing to Dublin, then a full flight plan must be filed with Aldergrove ATC at least sixty minutes prior to departure.

b) **Operation - Outbound**

i. The pilot must:

1. Lift into the hover to a height of not greater than 200 FT AGL, squawking 7000 and obtain zone clearance. Aldergrove ATC will pass any appropriate traffic information.
2. Only when a clearance has been received, can the flight set course subject to any restrictions that Aldergrove ATC may impose.

c) **Operation - Inbound**

i. Contact should be made, where possible, with Aldergrove Approach at least ten minutes flying time before the Belfast TMA boundary (if flying above the TMA base altitude) or the CTR boundary (if flying below the TMA base altitude) with a request for clearance to enter Controlled Airspace.
ii. The pilot shall report when descending into the private site. It should be noted that after this report has been made, no further action will be initiated by ATC, eg incident/accident, unless information to the contrary is received. If no acknowledgement is received from Aldergrove Approach, then the pilot must telephone Aldergrove ATC as soon as practical after landing.

Note: *An inbound clearance does not absolve the pilot from the need to contact appropriate adjacent ATSUs for transit clearance.*

6 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside, Belfast Aldergrove controlled airspace within the area defined below and maintaining a listening watch only on Aldergrove Approach channel, 133.130, are encouraged to select SSR code 7045:

545656N 0055417W - 545724N 0061134W - thence anti-clockwise by the arc of a circle radius 18 NM centred on 543927N 0061257W to 542135N 0061619W - 543233N 0060302W - thence anti-clockwise by the arc of a circle radius 9 NM centred on 543927N 0061257W to 543833N 0055732W - 545656N 0055417W.

b) Selection of 7045 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the controlled airspace at all times.
c) Whilst squawking 7045 pilots should be aware that Aldergrove Approach may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 7045 shall be deselected.

RAD	120.905	ALDERGROVE DIRECTOR
ATIS	126.130	ALDERGROVE INFORMATION
See AD 2.18 for details.		

MINIMUM INITIAL ALTITUDE

Within the ATC Surveillance Minimum Altitude area the minimum initial altitude to be allocated by the approach surveillance controller is:

a) **2200** in the sector defined by the lateral limits; 545357N 0061923W - 545226N 0061135W - 544625N 0061551W - 543940N 0061348W - 542623N 0060435W - 542333N 0060733W - 542444N 0061744W thence clockwise by an arc of a circle radius 15NM centred on 543927N 0061257W to 543723N 0063830W - 544821N 0063345W thence clockwise by an arc of a circle radius 15NM centred on 543927N 0061257W to 545357N 0061923W.

b) **2500** in the sector defined by the lateral limits; 545357N 0061923W thence clockwise by an arc of a circle radius 15NM centred on 543927N 0061257W to 545421N 0061023W - 545226N 0061135W - 545357N 0061923W.

c) **2200** in the sector defined by the lateral limits; 545000N 0053935W thence clockwise by an arc of a circle radius 15NM centred on 543705N 0055221W to 542208N 0055411W thence anti-clockwise by an arc of a circle radius 3NM centred on 542031N 0055823W to 542253N 0060130W - 542333N 0060733W - 545000N 0053935W.

d) **2500** in the sector defined by the lateral limits; 545421N 0061023W thence clockwise by an arc of a circle radius 15NM centred on 543927N 0061257W to 545409N 0060806W - 545309N 0055918W thence anti-clockwise by an arc of a circle radius 3NM centred on 545047N 0055605W to 545215N 0055132W - 545147N 0054723W thence clockwise by an arc of a circle radius 15NM centred on 543705N 0055221W to 545000N 0053935W - 543721N 0055303W - 543934N 0055920W - 543953N 0060220W - 543852N 0060451W - 543426N 0061008W - 543940N 0061348W - 544625N 0061551W - 545421N 0061023W.

e) **2600** in the sector defined by the lateral limits; 545309N 0055918W thence anti-clockwise by an arc of a circle radius 3NM centred on 545047N 0055605W to 545215N 0055132W - 545309N 0055918W.

f) **2800** in the sector defined by the lateral limits; 543426N 0061008W - 543852N 0060451W - 543953N 0060220W - 543934N 0055920W - 543721N 0055303W - 542623N 0060435W - 543426N 0061008W.

g) **3000** in the sector defined by the lateral limits; 542208N 0055411W thence clockwise by an arc of a circle radius 15NM centred on 543705N 0055221W to 542223N 0055716W - 542253N 0060130W thence clockwise by an arc of a circle radius 3NM centred on 542028N 0055827W to 542208N 0055411W.

OUTSIDE THE DESIGNATED ATC SURVEILLANCE MINIMUM ALTITUDE AREA

The minimum altitude to be allocated by the approach surveillance controller will be either the Minimum Sector Altitude, or **1000** above any fixed obstacles:

a) within 5NM of the aircraft, and
b) within the sector 15NM ahead of and within 20° either side of the aircraft's track.

LOSS OF COMMUNICATION PROCEDURES

Initial Approach

Continue visually or by means of an appropriate approved final approach aid. If not possible proceed at **3000**, or last assigned level if higher to **BEL VOR**†.

Intermediate and Final Approach

Continue visually or by means of an appropriate final approach aid. If not possible follow the Missed Approach Procedure to **BEL VOR**†.

† In all cases where the aircraft returns to the holding facility the procedure to be adopted is the Radio Failure Procedure detailed at ENR 1.1.3.4.

GENERAL INFORMATION

1. Levels shown are based on QNH.
2. Only significant obstacles and dominant spot heights are shown.
3. The minimum levels shown within the ATC Surveillance Minimum Altitude Area are in conformance with the Standard European Rules of the Air - SERA.5015.
4. Minimum Sector Altitudes are based on obstacles and spot heights within 25NM of the Aerodrome Reference Point.
5. Controlled airspace with a base in excess of **5000** or FL55, as appropriate, is not shown.
6. **This chart may only be used for cross-checking of altitudes assigned when in receipt of an ATC Surveillance service.**
7. **When vectoring an aircraft within the Final Approach Vectoring Area descent clearance below the SMAA to the FAVA altitude may only be Issued If the aircraft is either established on the final approach track or on an intercept of 40° or less, and in the case of instrument approaches other than SRA is cleared to intercept the final approach track.**
8. Detailed description of FIR, UIR, CTA and TMA see ENR 2.1.
9. Detailed description of ATS airspace organized at the aerodrome see AD 2.17.

CHANGE (12/26): MAZE HELIPORT ADDED.

EGAC AD 2.1 AERODROME LOCATION INDICATOR AND NAME

EGAC — BELFAST/CITY

EGAC AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	Lat: 543705N Long: 0055221W Mid point of Runway 04/22
2	Direction and distance from city	East side of Belfast Docks.
3	Elevation / Reference temperature / Mean Low Temperature	15 FT / 16 °C / -
4	Geoid undulation at AD ELEV PSN	184 FT
5	Magnetic Variation / Annual Change	1.04°W (2027) / 0.20°E
6	AD Administration Address Telephone Telefax AFS SITA	BELFAST CITY AIRPORT LTD. Belfast City Airport, Sydenham Bypass, Belfast BT3 9JH, Northern Ireland. +44 28-9093 9093 (Administration) +44 28-9093 9094 (Administration) EGACZTZX (ATC) Ground Ops: BHDAPXH.
7	Type of Traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	-

EGAC AD 2.3 OPERATIONAL HOURS

1	AD Administration	0630-2130 (0530-2030) To cover the possibility of an aircraft which departs within 15 minutes of normal aerodrome closing time having to return, the aerodrome operator will normally retain sufficient services and equipment for 15 minutes after the actual time of departures.
2	Customs and immigration	Subject to notified movements
3	Health and sanitation	As AD Hours.
4	AIS Briefing Office	0630-2130 (0530-2030)
5	ATS Reporting Office (ARO)	0630-2130 (0530-2030)
6	MET Briefing Office	0630-2130 (0530-2030)
7	ATS	0630-2130 (0530-2030). See also AD 2.18.
8	Fuelling	As AD hours.
9	Handling	0530-2145 (0430-2045)
10	Security	H24
11	De-icing	As AD hours by arrangement.
12	Remarks	Operational Hours: Aerodrome closes at 2130 (2030). Aerodrome operational hours may be extended for scheduled flights by prior arrangement. Requests for extension of aerodrome hours must be made to the Airport Duty Manager, Tel: +44 28-9093 5053. Positioning and non-scheduled flights will not be accepted after 2130 (2030).

EGAC AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo handling facilities	Full.
2	Fuel and oil types	AVTUR JET-A1 BP Aero Engine oils; Piston Type Engines; 80 - US Quarts, D80 - US Quarts - 205 lt Barrels, D100 - US Quarts - 205 lt Barrels
3	Fuelling facilities/capacity	-
4	De-icing facilities	Contact based airlines.
5	Hangar space for visiting aircraft	-
6	Repair facilities for visiting aircraft	Contact based airlines.

7	Remarks	Mandatory handling for all aircraft. Swissport Tel: 028-9093 5038. Cargo: Worldwide Flight Services (WFS) Tel: 028-9093 5191. FBO: Jet Assist Tel: 028-9692 2668; 028-9692 2669; Email: belfastcityops@jetassist.co.uk.

EGAC AD 2.5 PASSENGER FACILITIES

1	Hotels	Available within 10 minutes drive.
2	Restaurants	Snack/coffee bars. Buffet.
3	Transportation	Buses, car hire and taxis. Nearest railway station 100 M.
4	Medical facilities	Limited facilities. Defibrillator located in the terminal building.
5	Bank and Post Office	Burea de change. Cash dispensers in the teminal.
6	Tourist Office	Tourist Information Centre in Terminal Building.
7	Remarks	-

EGAC AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting services	RFF Category A7 Higher category is not available.
2	Rescue equipment	1 - 4 x 4 Cobra Fire Fighting Appliance, 2 - 6 x 6 Fire Fighting Appliances, 10 x Inflatable matting.
3	Capability for removal of disabled aircraft	Contact: Tel: +44 28-9093 5027 (Airfield Operations)
4	Remarks	-

EGAC AD 2.7 SEASONAL AVAILABILITY - CLEARING

1	Type of clearing equipment	Chemical de-icing. 3 snow ploughs. 2 brush blowers. 2 surface de-icing rigs.
2	Clearance priorities	Standard. See AD 1.2.2.
3	Remarks	Snow Co-ordinating Officer, Tel: 07850-928015.

EGAC AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	TERMINAL STANDS: 1 Surface: Concrete PCR 237/R/D/W/U TERMINAL STANDS: 10 Surface: Concrete PCR 237/R/D/W/U TERMINAL STANDS: 2 Surface: Concrete PCR 309/R/D/W/U TERMINAL STANDS: 21 Surface: Concrete PCR 237/R/D/W/U TERMINAL STANDS: 24 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 3 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 4 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 5 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 6 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 7 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 8 Surface: Concrete PCR 741/R/D/W/U TERMINAL STANDS: 9 Surface: Concrete PCR 237/R/D/W/U TERMINAL STANDS: VICTORIA Surface: Concrete PCR 237/R/D/W/U
2	Taxiway width, surface and strength	Taxiway ALPHA: 18 M Surface: Asphalt PCR 685/F/D/W/U
3	Altimeter checkpoint location and elevation	Stands 1-10, 13 FT amsl - Victoria Apron, 10 FT amsl.
4	VOR checkpoints	-
5	INS checkpoints	See Aircraft Ground Movement/Parking/Docking Chart.
6	Remarks	-

EGAC AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Stands 1-10 and 24 are nose-in push-back only. Stands 1-3, 5-10 and 24 AGNIS and surface arrow stop signs. Stand 4 APIS. Stands 6A/7A are nose-in and have painted surface markings. Pilots must not enter any part of a stand unless the guidance has been activated or a marshaller is present at the head of the stand, this procedure allows a FOD check to take place on the designated stand (please note, it may not be possible to see guidance until turned onto the stand lead in line). Victoria apron (except Stand 24) is as directed by ATC/Marshallers.
2	Runway and taxiway markings and lighting	Runway marking aid(s): 04/22: Displaced threshold markings and designators on Runway 04. Threshold markings and designators on Runway 22. Fixed distance markings and centre-line markings, Runway 04/22. Runways side stripes.
3	Stop bars and runway guard lights (if any)	Runway guard lights, Stop bars and internally illuminated signage at A1, A2 and A3 holding points.
4	Other runway protection measures	-
5	Remarks	Two WDI (LGTD) 543721.21N 0055209.87W; 543643.47N 0055237.84W.

EGAC AD 2.10 AERODROME OBSTACLES

Obstacle data is provided as Digital Datasets in XML (AIXM) and CSV formats via the NATS AIS Website at http://www.nats.aero/ais/datasets.

Further information on UK Digital Datasets can be found in GEN 3.1.6.

EGAC AD 2.11 METEOROLOGICAL INFORMATION PROVIDED

1	Associated MET Office	NETWORK OPERATIONS CENTRE: NORTHOLT
2	Hours of service MET Office outside hour	H24 -
3	Office responsible for TAF preparation Periods of validity	NETWORK OPERATIONS CENTRE: NORTHOLT 9 hours.
4	Trend forecast Interval of issuance	-
5	Briefing/consultation provided	Self briefing/Telephone.
6	Flight documentation Language(s) used	Charts abbreviated plain language text. TAFs and METARs. English
7	Charts and other information available for briefing or consultation	-
8	Supplementary equipment available for providing information	-
9	ATS units provided with information	BELFAST/CITY
10	Additional information (limitation of service, etc.)	Unverified automatic MET observations are available on ATIS (124.580 MHz) or by telephone on +44 28-9093 5124 outside of aerodrome/ATC hours.

EGAC AD 2.20 LOCAL AERODROME REGULATIONS

1 AIRPORT REGULATIONS

a) Belfast City Airport is only available to noise certified Chapter lll aircraft except in emergency or diversion.
b) Ground running of aircraft engines shall be subject to the approval of the aerodrome authority. No ground running of engines is permitted between 2230-0600 (2130-0500).
c) Use of the aerodrome by aircraft not able to communicate with ATC subject to prior permission.

2 GROUND MOVEMENT

a) Aircraft shall not enter a stand until stand entrance guidance is activated or marshalling assistance is available on stand. If neither is available crew shall stop on short on stand centre-line and request (via ATC) that the stand be activated.

3 CAT II/III OPERATIONS

a) Belfast City Airport is not equipped for CAT II/III operations, however Low Visibility Procedures are used to protect CAT I operations.
b) Low Visibility Procedures will commence when RVR/Met visibility falls to 800 M or less, or cloud ceiling is observed to be 200 FT or less.
c) Pilots will be informed when these procedures are in operation by ATIS or by RTF.

4 WARNINGS

a) Aircraft assembly hangar on the northwest side of the runway, infringes transitional surface by 2.84 M, 269 M from the runway centre-line.
b) Pilots should anticipate windshear on approach to Runway 22 and departure from Runway 04 when the surface wind direction is between 100° and 160° + 15 KTS. Due to strong wind conditions, turbulence may be expected on approach or climb out to/from either runway.
c) Pilots are warned of the presence of greylag geese in the vicinity of the Aerodrome. The geese normally transit between the north-east of the Aerodrome and Victoria Park which is below the 04 Approach. Geese movements are typically at dawn and dusk and at an altitude of approximately 50-100 FT AGL. Aerodrome Bird Dispersal, including the use of pyrotechnics, is in operation during Aerodrome operational hours.
d) HT pylons 115 FT AAL 0.66 NM from threshold of Runway 04.
e) High ground rising to 644 FT AMSL within 2.4 NM to the East and South.
f) High ground rising to 1227 FT AMSL 3.9 NM to the West and Northwest.
g) Floating cranes and shipping in Belfast Harbour.
h) Three cranes (Lgtd), 250 FT AAL 1 NM West of the aerodrome.
i) Two chimneys (Lgtd) 250 FT AAL 1 NM West of the aerodrome.
j) ILS Glide Path and Precision Approach Path Indicators (PAPI) - Runway 04 only: With a certain combination of aircraft type and antenna configuration, there is potential for crews to observe a small discrepancy between indications from the ILS Glide Path and PAPI on

Runway 04. Both of these approach path guidance systems are within published tolerance limits and are regularly flight checked for compliance and accuracy.

5 HELICOPTER OPERATIONS

Not applicable

6 USE OF RUNWAYS

a) Arrivals; Runway 22 is the preferred landing runway. Departures; Runway 04 is the preferred departure runway.

7 TRAINING

a) Training flights by prior arrangement only.

EGAC AD 2.21 NOISE ABATEMENT PROCEDURES

1 GENERAL

Every operator of aircraft using, or intending to use the Aerodrome shall ensure at all times that aircraft are operated in such a manner calculated to cause the least disturbance practicable to areas surrounding the Airport. These procedures may only be departed from to the extent necessary to avoid immediate danger or in compliance with ATC instructions. Operators of all aircraft are required to conform with the following procedures.

2 TAKE-OFF, CLIMB AND GO AROUND

Aircraft operators shall instigate their aircraft manufacturers Noise Abatement recommended procedures on departure and up to FL 100, or the procedures listed below:

a) Take off to 1500 FT

Power	—	Normal take off
Speed	—	V2 + 10 KT(+)
Flaps	—	Set as appropriate

b) 1500 to 3000 FT

Power	—	Reduced to Climb Thrust
Speed	—	V2 + 10 KT(+)
Flaps	—	Maintain previous setting

Note: *V2 + 10 KT (+) indicates that V2 + 10 KT may be exceeded where pitch angle or specific aircraft characteristic are possible limiting factors;*

c) At 3000 FT retract flaps on schedule and assume normal en-route climb (subject to individual ATC Clearance).

d) 3000 FT to FL 100 - max climb speed 250 KT or as instructed.

3 DEPARTURES

a) **Runway 04**

i. **All Jet Aircraft**

On passing 500 FT QNH, left turn TRACK 032°M and climb to altitude 3000 FT QNH before turning. Thereafter as per ATC Clearance.

ii. **Propeller Aircraft greater than 13,000 KG MTOW**

On passing 500 FT QNH, left turn TRACK 032°M and climb to altitude 2000 FT QNH before commencing turn. Thereafter as per ATC Clearance.

iii. **Propeller Aircraft 13,000 KG MTOW or less**

On passing 500 FT QNH, left turn TRACK 032°M and climb to altitude 1500 FT QNH before commencing turn. Thereafter as per ATC Clearance.

b) **Runway 22**

i. **All Jet Aircraft**

Climb straight ahead to altitude 3000 FT QNH before turning, thereafter as per the clearance issued by ATC.

ii. **Propeller Aircraft greater than 13,000 KG MTOW**

Climb straight ahead to altitude 2000 FT QNH before turning, thereafter as per the clearance issued by ATC.

iii. **Propellor Aircraft 13,000 KG MTOW or less**

Climb straight ahead to altitude 1500 FT QNH before turning, thereafter as per the clearance issued by ATC.

4 ARRIVALS

a) **Arriving Aircraft**

i. Radar vectored or instrument approaches will be conducted at altitudes consistent with the RVA or appropriate approach chart. Radar assigned levels on base leg Runway 22 will be 2500 FT until aircraft have coasted out.
ii. Aircraft landing without assistance from glidepath shall descend in accordance with the recommended profile provided in the UK AIP Instrument Approach Charts.

b) **Visual Approaches**

i. Runway 22 – Aircraft are to establish on the 7 DME arc (I-BFH) and coast out not below 2500 FT QNH before establishing on the final approach track at not less than 5 DME.

c) **Runway 04**

i. Descent profiles shall be optimised to establish on the final approach track at 5 NM not below 1500 FT.
ii. Aircraft downwind left Runway 04 are exempt from the above restriction if the flight path avoids residential areas.
iii. It is recommended that aircraft making an approach to Runway 04 shall follow a descent profile which will not result in it being at any time lower than the approach path which would be flown during an ILS GP approach.

EGAC AD 2.22 FLIGHT PROCEDURES

1 ALTIMETER SETTING

a) Pilots flying beneath the Belfast TMA below the Transition Altitude (6000 FT) should use the QNH of an aerodrome situated within the lateral limits of the TMA; except that the aerodrome QFE may be used when flying within the circuit.

2 PROCEDURES FOR INBOUND AIRCRAFT

a) **Clearance to Enter the Belfast TMA**

i. Aircraft flying on the Airways System will be cleared into the Belfast TMA without having to request a specific entry clearance.
ii. Aircraft wishing to enter the TMA from the open FIR, whether IFR or VFR, must obtain clearance from Belfast Approach Control if joining from the south or east, or from Aldergrove Approach Control if joining from other directions.

b) **Standard Routes**

i. The standard initial routes for inbound aircraft, which are shown in the table below, may be varied at the discretion of ATC (eg for traffic reasons or to allow traffic to be sequenced by radar).

Approach from	Via	Route
NE	P600	BLACA - MAGEE
E	FIR	BLACA/TMA Boundary - MAGEE or HB as directed by 'Belfast Approach'
SE	L10 (RNAV 5 FL 75 and above)	IOM - NELBO - MAGEE
	L10 (Below FL 75)	IOM - RINGA - MAGEE
	UP6/L46 (RNAV 5)	REMSI - MASOP - NELBO - MAGEE
	M148 (RNAV 1 FL 255 and above)	REMSI - NINEB - MASOP - IDGAS - IBTES - LIMKA - MAGEE
	M146 (RNAV 1 FL 195 and below)	ERDUV - LUSOD - PEPEG - ROBOP - MAGEE
	M146 - Z198 - M148 (RNAV 1 FL 195-FL 255)	ERDUV - MASOP - IDGAS - IBTES - LIMKA - MAGEE
S	N34	NEVRI - ABSUN - MAGEE

Approach from	Via	Route
SW, W, NW and N	FIR	TMA Boundary - MAGEE or HB as directed by 'Belfast Approach'

Note: *See also UK Standard Route Document. Available online from NATS/AIS website: http://www.nats.aero/ais.*

c) Holding

i. The primary holding patterns at NDB(L) HB and MAGEE (544730N 0053630W) are detailed on the Instrument Approach charts.

3 PROCEDURES FOR OUTBOUND AIRCRAFT

a) The standard routes for outbound aircraft are detailed in the following table. Routes may be varied at ATC discretion according to prevailing traffic conditions. **Pilots are reminded that strict adherence to noise abatement procedures (see AD 2.21) is required PRIOR to following subsequent routing instructions.**

Departing to	Via	Runway	Route
SE	L10 (Below FL 75)	04	Right turn - DCT - RINGA
		22	Left turn - DCT - RINGA
	L10/Q39 (FL 75 and above)	04	Right turn - DCT - RINGA
		22	Left turn - DCT - RINGA
	L15/L603/Q38 (FL 75 and above)	04	Right turn - DCT - PEPOD
		22	Left turn - DCT - PEPOD
S	P620	04	Right turn - DCT - NUMPI
		22	Left turn - DCT - NUMPI
N	P600	04	Right turn - DCT - BLACA
		22	Left turn - DCT - BLACA

Note: *See also UK Standard Route Document. Available online from NATS/AIS website: http://www.nats.aero/ais.*

b) North Atlantic Jet Departures

i. Due to the proximity of the Shanwick Oceanic boundary to Belfast City, pilots must consider timescales for submitting an 'RCL'. Refer to ENR 2.2, paragraph 3.8.2 for details.

c) Belfast City Departures Via IOM - Speed Profile

i. Traffic departing Belfast City via L15/Q39 with a requested level of FL 290 or above is required to cross SOSIM/INKOB at FL 290 or above. To ensure that these aircraft can achieve the required level by SOSIM/INKOB, speed restrictions are to be observed.
ii. All Belfast City departures to the south-east with a requested flight level of FL 290 or above, are to fly in accordance with the following maximum speeds:

1. Jet traffic with a MTOW greater than 35000 KG Max 250 KT IAS until FL 100, then Max 290 KT IAS until FL 250;
2. Jet traffic with a MTOW less than 35000 KG and all non jet traffic; Max 250 KT IAS until above FL 250.

iii. Aircraft unable to reach FL 290 by SOSIM/INKOB must advise Belfast City prior to push-back, giving the anticipated flight level at SOSIM/INKOB.

4 ROYAL VICTORIA HOSPITAL (RVH) & MUSGRAVE PARK HOSPITAL (MPH) OPERATIONS

a) The RVH is located within Class G Airspace immediately adjacent to Belfast City CTR (Class D); MPH is located within the Belfast City (Class D) CTR.

Pilots of aircraft operating to/from the RVH or MPH should be aware of the potential for conflictions and/or TCAS events to occur with aircraft operating to/from Belfast City Airport. To reduce conflictions, the following procedures apply:

i. **RVH Helipad**

1. **RVH - Inbound.** Due to the proximity of CAS to the East, Pilots are strongly advised to establish two-way communications with Belfast City and, if required, request a CTR entry clearance.
2. **RVH - Outbound.** Pilots are strongly advised to call Belfast Tower on 122.830 when on the Helipad; if unable to establish two-way communications contact Belfast Approach on 130.855.

ii. **MPH Helipad**

1. **MPH - Inbound.** Pilots are to establish two-way communications with Belfast City requesting a CTR entry clearance.
2. **MPH - Outbound.** When inbound, pilots will be issued with departure instructions as follows: Call Belfast Approach on 130.855 when on the ground, if unable to establish two-way communications, lift low-level to the West of the M1 Motorway departing the CTR, and establish two-way communication.

b) Outside of Belfast City operating hours a Basic Service may be available from Aldergrove Radar on 133.125 MHz.

5 VISUAL REFERENCE POINTS (VRP)

a) To facilitate the integration of VFR flights within the Belfast Airspace, pilots may be required to join/leave the airspace via specified VRPs.
b) Details of VRPs are available in the consolidated 'Visual Reference Points List' published on the 'Digital Dataset' page of the NATS AIS website, www.nats.aero/ais.

6 FREQUENCY MONITORING CODE (FMC)

a) Pilots operating in the vicinity of, but intending to remain outside, Belfast/City controlled airspace within the area defined below and maintaining a listening watch only on Belfast Approach channel, 130.855, are encouraged to select SSR code 4255:

545930N 0051542W - 545548N 0052800W -
545656N 0055417W - 543833N 0055732W -
thence clockwise by the arc of a circle radius 9 NM centred on 543927N 0061257W to
543233N 0060302W - 542135N 0061619W -
540707N 0060015W - 540520N 0055140W -
542050N 0052650W - 545410N 0051030W -
545930N 0051542W.

b) Selection of 4255 does not imply the receipt of an ATC service. Aircraft displaying the code are not expected to contact ATC under normal circumstances, remain responsible for their own navigation, separation, terrain clearance and are expected to remain clear of the controlled airspace at all times.
c) Whilst squawking 4255 pilots should be aware that Belfast Approach may make blind transmissions in order to ascertain a particular aircraft's intentions/route.
d) When a pilot ceases to maintain a listening watch, code 4255 shall be deselected.

EGAC AD 2.23 ADDITIONAL INFORMATION

a) An obstacle free distance of approximately 93 M exists from the end of the paved surface at the southwest end of the runway up to the location of the Runway 22 localiser.
b) A further obstacle free distance of approximately 15 M exists from the Runway 22 localiser to the non-frangible aerodrome boundary fence, beyond which there is a steep-angled drop of several metres down to a tidal lagoon.
